Review comments on egusphere-2026-1762

Akira Kuwano-Yoshida

General comments

The manuscript has been carefully and thoroughly revised in accordance with the reviewers' comments. However, since a few typographical errors, grammatical issues, and terminology inconsistencies remain, I recommend a minor revision.

Specific comments

Line 121 (Subject-verb agreement)
Current: 'Analytically, the SST gradient profiles is prescribed by'
Correction: 'SST gradient profile is' (or 'profiles are').

Line 186 (Redundant preposition):
Current: 'the maximum wind speed of in the subtropical jet core'
Correction: 'the maximum wind speed in the subtropical jet core' (Remove 'of').

Line 187 (Duplicated verb):
Current: 'This is most likely is due to'
Correction: 'This is most likely due to' (Remove the duplicate 'is').

Line 237 (Typo in word):
Current: '(marks in Fig. 5c)'
Correction: '(markers in Fig. 5c)' (To stay consistent with 'markers' used elsewhere in the text, e.g., Line 184, 191).

Line 261 (Missing trailing period):
Current: 'in the cold climate experiments (M24.5, F45-5)'
Correction: '(M24.5, F45-5).' (Add a period at the end of the paragraph).

There is a mix of "storm-track activity", "storm track activity", and "storm tracks activity" throughout the manuscript. Please unify these to a consistent singular form (e.g., storm-track activity)
