**Comments on egusphere-2022-1183 – Timothy Schmid**

**Structural control of inherited salt structures during inversion of a domino basement-fault system from an analogue modelling approach**

By

*Oriol Ferrer, Eloi Carola, Ken McClay*

I would like to thank the authors for their thorough revision of the manuscript and the efforts to improve the overall quality. The authors have considered all comments and suggestions of both reviewers in the previous revision round and made appropriate changes, where needed. In some cases, the authors carefully explained their decisions for keeping certain statements as is.

- The overall structure of the manuscript has improved and makes it easy to understand the author's way of reasoning.

- Figure's readability has improved by adding better labels, captions and/or titles which makes Figures self-explanatory.

I appreciate the author's efforts to improve the manuscript and, based on these improvements, I suggest accepting the manuscript as is.
