Dear Editors,

We are delighted that our manuscript "Epidote dissolution–precipitation during viscous granular flow: a micro-chemical and isotope study" (MS id: egusphere-2022-311) was accepted for publication.

The manuscript files uploaded for production include minor (i.e., language-related and non-scientific) changes suggested by Referee #1 in their review file following our revisions.

Yours sincerely,
Veronica Peverelli, on behalf of all authors
