| <p>Discussion.....</p> <p>In terms of accuracy, our algorithm performed satisfactorily when compared to an approach based on optical images.</p> <p>Please provide an example for the above-mentioned statement (compared to other studies of the Jamuna River). Otherwise, you can't say!</p> <p>So, you should either include information or rewrite it.</p> | <p>Thank you for this remark. The statement which you mention does not refer to other studies which have been performed on the Jamuna River using optical data, but rather to section 3.4 of our own manuscript, where we compare our radar-based approach to a classification resulting from using optical images. We have added a reference to section 3.4 in the discussion section, to clarify what we refer to.</p> |
