

Response to Editor

Q1.1 I am happy to accept the revised version of your manuscript for publication. Even though the reviewer #2 points out room for model improvement, the paper contains valuable detailed descriptions of the ODEs. Reviewer #1 suggests improvement of the legibility of the manuscript. Thus I give you room to update the phrasing of the manuscript text.

A1.1 Thanks a lot for accepting our manuscript. We read through our manuscript again and made some corrections to improve the legibility of the paper. Please see the places marked in red and blue throughout the manuscript.

Moreover, because Dr. Le Cao made a huge contribution to this paper, we decided to switch the order of first two authors. Please see the list of authors in the revised manuscript.

Thanks again for your hard work on this paper.
