

#### General Comments:

I find that most of my comments have been satisfactorily addressed in the revision. Although I have different opinions about DLL and used a different technical solution to implement our integration framework, I believe the revised manuscript can be published now after some confirmation. Many solutions can introduce advantages and disadvantages at the same time.

#### Specific comments:

1. About Figure 2 and Listing 1.

The code in Listing 1 just merges the data in different blocks into an array without following the parallel decomposition.
