This file contains the following:

Figure S1- Wind speed of the training and validation images used in this paper. Colour scale indicates number of images with each wind speed.

Figure S2- Mix depth of the training and validation images used in this paper. Colour scale indicates number of images with each mix depth.

Figure S3- Plume time step (s) of the training and validation images used in this paper. Colour scale indicates number of images with each time step.

Figure S4- Emission rate of the training and validation images used in this paper. Colour scale indicates number of images with each emission rate.

Table S1- Locations of PRISMA scenes used to make training, validation, and testing data.

Table S2- Mean and standard deviation of the noise and methane concentrations of the false positives and false negatives described in Table 1.

Table S3- Plumes found in the Korpeje oil field using the neural network.

Figure S1: Wind speed of the training and validation images used in this paper. Colour scale indicates number of images with each wind speed.

Figure S2: Mix depth of the training and validation images used in this paper. Colour scale indicates number of images with each mix depth.

Figure S3: Plume time step (s) of the training and validation images used in this paper. Colour scale indicates number of images with each time step.

Figure S4: Emission rate of the training and validation images used in this paper. Colour scale indicates number of images with each emission rate.

Table S1: Locations of PRISMA scenes used to make training, validation, and testing data. Right column lists of numbers detail the number of different training images made using the corresponding scene in the left column. Each value in the list corresponds to a different PRISMA scene.

Scene location	Number of images made
Brazil	412, 437
Canada	442, 437
Iraq	151, 161, 159, 154, 149, 16
Iran	169, 14, 15, 12, 21, 15, 18, 15
Saudi Arabia	18, 16, 21, 12, 7
South Africa	434, 407, 418, 421, 449, 438
Texas	147, 157, 143, 183, 170, 428, 417
Turkmenistan	152, 167, 145, 168, 153, 162, 140, 155, 147, 431, 390, 450

Table S2. Mean and standard deviation of the noise and methane concentrations of the false positives and false negatives described in Table 1.

	Mean, std of scene noise (PSNR)	Mean, std of max methane concentration (1e18 molecules cm⁻²)
True positive	20,5	49,
True negative	18,5	N/A
False positive	20, 5	N/A
False negative	17, 5	10, 9

Table S3. Plumes found in the Korpeje oil field using the neural network. PRISMA scene code indicated on the far left, with 'PRS_L1_STD_OFFL_' from the beginning for brevity. Coordinates of the centre of the plume and estimated emission rate are detailed in the right-most columns.

Scene code	Plume number	Coords of plume (x,y)	Emission rate (kg/hr)
