

12 **Abstract**

13 Fostering understanding and support for environmental and climate issues requires a
14 foundational understanding of how environmental discourse interacts with the public.
15 Animated films exist as a medium in which environmental messaging is distributed to the
16 public with the goal of inducing behavioural change in an audience. The goal of this paper is
17 to link the messaging of such films with audience feedback. This will be accomplished by
18 analyzing the impact of two environmentally focused animated films, *The Lorax* and
19 *Tomorrow*, produced in Hollywood (United States) and Dhallywood (Bangladesh),
20 respectively, and by using environmental humanities discourse analysis to examine how
21 people responded to these films on social media websites. The first part of the article is the
22 analysis of selected social media pages to understand the impact of these two films on
23 contemporary environmental discourse, and the second part comprises an analysis of the
24 environmental narrative of the films. I selected these two films for four reasons: i) they are
25 both environmental educational and pedagogical tools; ii) they use environmental
26 storytelling; iii) they both address sustainability; and iv) they may have influenced some
27 discourse on environmental issues on social media. The study demonstrates that
28 environmentally driven animated films can affect and shape the discourse of their audiences.
29 This study also demonstrates how narratives from films such as *The Lorax* and *Tomorrow* can
30 lead an audience to consider large-scale environmental issues.

31 **Keywords**

32 environmental storytelling; environmental discourse analysis; environmental education;
33 environmental communication; sustainability; sense of place; films; social media

34 **Introduction**

35 Using environmental discourse analysis as a narrative inquiry, I investigated two
36 animated eco-blockbusters, selected for the rich social media feedback available for

37 them: *The Lorax* (Chris Renaud, 2012) and *Tomorrow* (Mohammad Shihab Uddin, 2019).
38 The 2012 rendition of *The Lorax* was selected over the 1972 version, as while the 1972
39 version is closer to *Tomorrow* in terms of time format, the release date makes the 2012
40 version more suited for social media analysis, avoiding nostalgia as a confounding factor.
41 The films were produced in Hollywood (United States) and Dhallywood (Bangladesh,
42 Bangladeshi production house Cycore Studios), respectively. *Tomorrow* specifically was
43 selected as standout film produced recently within the global South that has received good
44 reception both domestically and internationally, having won the Cannes World Film Festival
45 (Not to be confused with the *Festival de Cannes*) award in August 2021 and having received
46 praise from western environmental journalist Bill McKibben. Another major factor in the
47 selection of *Tomorrow* was that it came out at a time in which there was a relatively large
48 population of Bangladesh had internet access, going from 5% of the population having access
49 in 2012 to 23.8% in 2019, providing an early look into how a key population within the
50 global South reacts to environmental messaging targeted specifically at them (ITU, 2022).
51 The 2012 incarnation of *The Lorax*, while deviating from the source material, was selected as
52 a contemporary western environmental blockbuster due in part to its similarities in art style to
53 *Tomorrow*, and due to sharing a message that promotes a world where sustainability is not
54 prioritized over economic development. While more popular and award winning films closer
55 in format and style to *Tomorrow* would have been valuable sources, no such films appear to
56 exist. For example, *WALL-E* was also considered for analysis, but was not selected due to not
57 showing the world prior to environmental collapse, lacking the same direct cause and effect
58 of before and after environmental collapse shown in *Tomorrow* and *The Lorax*.

59 Animated films may be a powerful medium of environmental education and shape the
60 public discourse, as discussed below. That said, both stories take different approaches to this
61 end - while *The Lorax* describes the severity of waste and environmental collapse caused by

62 deforestation (and implicitly climate change, given the media environment and promotional
63 material around the release of the film), *Tomorrow* describes how such events result in
64 climate change. *The Lorax* uses a fictional world to deliver a general message while
65 *Tomorrow* highlights the reality of severe climate injustices in the global South such as
66 Bangladesh. I undertake a meticulous analysis of social media commentary to gain valuable
67 insights into the perception and response of the general public in both Bangladesh and the
68 United States, specifically in relation to the climate-change themes depicted in the animated
69 films. By carefully examining the discussions and reactions of individuals from diverse
70 backgrounds and demographics on various social media platforms, I aim to unravel the
71 profound impact these films have on the broader population and their role in shaping the
72 discourse surrounding climate change and environmental concerns.

73 Humanities scholars such as Alexander Elliott and James Cullis (2017) argue that
74 research on climate change has shifted to a global scale from a previous focus on the Euro-
75 American perspective. The film *Tomorrow* reflects this trend in the realm of popular culture.
76 *Tomorrow* came out in 2019 after being in development for two years, notably about the
77 same period as Bangladesh had experienced several environmental disasters, including flash
78 floods attributed to climate change. This is further substantiated by two supporting sources.
79 The Business Standard (2021) news highlights this correlation, while Hossain et al. (2020)
80 explore the implications of these extreme flood disasters, emphasizing their impact on the
81 livelihoods and coping mechanism of the Char Village. 2012's *The Lorax* is similar, despite
82 not being set in a specific place, in that it was released at a time when environmental
83 catastrophes including earthquakes, wildfires, and hurricanes were major stories in media
84 across the globe, including the previous year's Fukushima nuclear disaster stroking fears of
85 nuclear contamination across the Pacific Ocean, and the remnants of Hurricane Irene causing
86 atypical damage in parts of New England. While Hurricane Irene was in many cases not as

87 bad as it was predicted to be in regards to the effects on New York City, it did cause a media
88 frenzy prior to landfall, and actual catastrophic flooding in many places, especially parts of
89 Vermont and New Hampshire. Both films therefore addressed the global nature of
90 environmental crisis in a timely manner. Through the joint analysis of the films and their
91 reception by viewers on social media, this study finds evidence that these two films gave their
92 viewers thematic narratives and talking points that they then incorporate into personal
93 discussion and in general promotion of environmental causes.

94 **Methodology**

95 Using environmental humanities discourse analysis as a tool, the principal question of
96 this study is: *How do The Lorax and Tomorrow instruct viewers about key environmental*
97 *messages?* To answer this overarching question, I consolidated the public comments and the
98 narrative analysis of the films into three main categories: *environmental catastrophe,*
99 *environmental storytelling,* and *environmental education* in order to address three questions
100 related to these three environmental discourses. First, *how are these two films situated within*
101 *the discourses of environmental catastrophe?* Second, *how do these two films perform*
102 *environmental storytelling while emphasizing a sense of place, i.e., spatiality?* Third, *what*
103 *sorts of educational messages do these two films spread regarding sustainability?*

104 The environmental discourse analysis in the paper is structured as follows. First, this
105 paper provides a brief synopsis of the films. Second, this study considers the literature on
106 how public comments online pertain to broader environmental media. Continuing the
107 discourse analysis, a select sampling of activity on social media pages related to each film is
108 analyzed to understand the discourse surrounding each. Third, the paper provides an
109 environmental discourse analysis to extract the themes and narratives from both films with
110 the most impact. By using both an analysis of social media posts about the films and a direct

111 analysis of the films themselves, this study demonstrates how aspects of each film influenced
112 public discourse.

113 I use an environmental discourse analysis model drawn mainly from anthropologists
114 Peter Mühlhäusler's and Adrian Peace's scholarship. My narrative analysis also incorporates
115 spatiality as it shows how discourse may vary in different local, regional, and global contexts
116 even when they address the same environmental concerns. Furthermore, the narratives and
117 target audiences of both works incorporate some spatiality, with *Tomorrow* being squarely set
118 in the real world and particularly focused on Bangladesh, while *The Lorax* was a Hollywood
119 blockbuster aimed at the developed world with a fictional setting reminiscent at first glance
120 of global North suburbia. While discussing the methods of environmental discourse analysis,
121 Peace states that emphasis on keywords and select terminologies is vital to the
122 anthropological contribution to environmental discourse analysis (p. 415). As a part of the
123 environmental discourse analysis, I chose the selected words and phrases from the content
124 and comments of the two films. The study also deals with spatiality as both comments and
125 contents highlight local and global concerns about the environment.

126 I use social media as a platform to measure and understand public reactions. To
127 extract public comments about *The Lorax* on social media, I used the search term: "lorax" on
128 Twitter (currently in the process of being rebranded as X) using the Netlytic social networks
129 analyzer, which yielded exactly 1000 comments. This number of comments was chosen as it
130 is the default used by Netlytic and represents a reasonable sample for manual coding of
131 sentiments. Based on the research objectives and available resources, it was determined that a
132 sample size of 1000 comments would provide a sufficiently representative sample for manual
133 coding of sentiments. It is also worth noting that the ability to conduct an updated analysis
134 using Netlytic may have been affected by recent changes made by Elon Musk to the Twitter
135 API, which can impact the availability of data. I confined the study to Twitter because

136 Netlytic does not extract comments from Facebook, and because *The Lorax* Facebook page
137 has very few public comments from which to glean data. Furthermore, *The Lorax* does not
138 have a YouTube page. For *Tomorrow*, I extracted comments from *Tomorrow's* YouTube
139 page, as *Tomorrow* does not have either Facebook or Twitter pages. I extracted comments by
140 using a web scraping method written in the Python programming language, using the search
141 term: “tomorrow animated movie”; which yielded 1510 comments (Bengali and English) out
142 of 4974 total, based on which comments received more “likes” (the remainder of comments
143 were omitted for falling below a threshold of likes). For *The Lorax*, the Twitter comments
144 spanned a decade, as the film was released in 2012. As *Tomorrow* is a relatively recent
145 release, so are all its comments. After transferring the data to a Microsoft Excel spreadsheet, I
146 manually examined it, developing codes to analyze public reactions pertaining to different
147 environmental discourses. I began with a total of twenty-five codes, re-examined the data,
148 and condensed them to seven major codes. Using the statistical programming language R, I
149 present a graphical text categorization algorithm that generates skip-gram phrases selectively,
150 by extracting and using phrases. Commenter names and online handles have been excluded
151 for anonymity.

152 **Film synopses**

153 The animated film *The Lorax* (2012) is loosely based on Dr. Seuss’s children’s book,
154 *The Lorax* (1971), although the plot of the film diverges from the source material. This
155 divergence primarily takes the form of additional plot points and characterization, such as the
156 focus on the history of the Once-ler, or newly invented characters such as Aloysious O’Hare.
157 Visual communication studies scholar Dylan Wolfe (2008) notes that environmentalism is a
158 key feature of the work.

159 Produced by Illumination Entertainment and released by Universal Pictures in 2012,
160 *The Lorax* had a budget of \$70 million and grossed \$348.8 million worldwide (Box Office

161 Mojo, n.d.). *The Lorax* showcases the process of industrialization, portraying the cause and
162 effect of the hypocritical nature of “human progress” when externalities are not addressed,
163 and the environment is not thought of as worth protecting. It must be noted that
164 environmental messaging in media adjacent to the film was compromised, as noted by
165 Caraway and Caraway (2020) in their article, while the film railed against greenwashing,
166 cross promotion in advertising with the film was used to showcase gas-powered automobiles.
167 In her article, communication scholar Ellen Moore (2016) also notes this as a flaw as it
168 changes the focus from reducing consumption to encouraging a nebulous “green”
169 consumption.

170 Ted, the protagonist, wants a real tree, which is now so rare as to be mythical. The
171 tree is intended to impress a girl he likes named Audrey. Audrey personifies trees and is
172 described using words such as “softer than silk” and “smelled like butterfly.” Because of
173 Audrey’s love of nature, somewhat uncharacteristic of a Thneedville resident, her character
174 invokes a sense of conservation. Audrey shows Ted a painting of trees with a sense of loss
175 and lamentation. Unlike how the general population and especially the industrialists of their
176 town of Thneedville approach trees, Audrey’s approach produces a renewal in environmental
177 consciousness. To investigate the disappearance of the real trees, Ted visits a hermit known
178 as the Once-ler and the Lorax who “speaks for the trees.” Speaking for the trees (Earth) is
179 portrayed in a positive light.

180 The Once-ler represents industrialist society, which profited from development, but at
181 the cost of pollution and deforestation. The Once-ler employs subterfuge in his
182 industrialization, including “greenwashing.” The Lorax’s warnings were ignored by the
183 Once-ler when he became an industrialist, and the sky was filled up with smoke, the water
184 polluted with sludge, and the land was left barren. Greed and the illusion of progress
185 deafened the Once-ler to the words of the Lorax until one day the last Truffula tree was

186 chopped down, and the Once-ler discovers that he is condemned to grow old and waste away
187 in the wretched badlands of his own making. This very clear cause and effect is a cautionary
188 tale to viewers, showing how unethical profiteering can one day leave them worse off, with
189 gains that were fleeting. Because the Lorax disappeared when the last Truffula tree was
190 chopped down, the Once-ler relays to Ted the Lorax’s cryptic last message, “Unless someone
191 like you cares a whole awful lot, nothing is going to get better, it’s not” (1:02:09). This is a
192 clear call to action to the audience, as Ted is the archetype of the everyman, a person who the
193 audience can relate to. Indeed, the Once-ler charges Ted, and by extension the audience, with
194 repairing the devastated environment. However, other industrialists in the movie, chief
195 among them a clean air tycoon named O’Hare, fight to keep the status quo by tricking the
196 populace, subconsciously warning the audience that pushback from people they know may in
197 fact be misdirection from real-life industrialists.

198 The 2019 film *Tomorrow* (budget: 10 million BDT, converted roughly to ~119,000
199 USD; a reliable figure for gross income could not be found) similarly portrays a dire future in
200 the hopes that the present generation will find a way to avoid it (*The Daily Star*). *Tomorrow*
201 begins when Ratul and his father, a nature lover, learn that sea levels are rising, which will
202 make them and their fellow villagers ecological refugees. Despite this knowledge, they and
203 the villagers are reluctant to take any actions to prevent the hazard. One of the villagers’
204 comments, “why would we ruin today thinking about tomorrow?” (4:10) is a refrain viewers
205 may be familiar with, a carelessness about their own future.

206 In a dream, Ratul learns that Bangladesh is going to face a disastrous fate because of
207 rising sea levels combined with the melting ice caps in the Himalayas. To answer Ratul’s
208 questions, Batasher Buro, a shamanic figure known as “the Old Man of the Winds,” takes
209 him to the future, in which most of southern Bangladesh is submerged, with almost 30
210 million homeless and destitute people taking shelter in the north. This reflects real life—for

211 some time now, residents of southern Bangladesh have been migrating to the capital city,
212 Dhaka, and other comparatively highland parts of the country. But there is still hope: the Old
213 Man of the Winds takes Ratul to another possible future, where solar panels and windmills
214 are commonplace and there is no usage of fossil fuels. This alternate future implies that
215 mankind has a choice. Ratul wants to know how to build a future like this, but the Old Man
216 of the Winds leaves, saying this is Ratul's planet and he himself needs to seek an answer.
217 Similar to *The Lorax*, Ratul is an everyman, with the audience implicitly being told to
218 personally care about the environment themselves.

219 Ratul awakens concerned about the welfare of Earth. Inspired by his father's
220 motivational speech about saving the environment, Ratul starts a campaign on social media
221 focused on taxing fossil fuels, inspiring protests, which start taking place all over the world.
222 (Posting on social media and protesting are actions that viewers may be able to take on their
223 own; these easier actions are shown first, lowering the barrier for meaningful action by the
224 audience.) The film then leaps 25 years in the future to show a grownup Ratul delivering a
225 speech at the United Nations. By then, many parts of the world, including southern
226 Bangladesh, are submerged. But there is optimism that Bangladesh can rehabilitate its people
227 with money from a tax on fossil fuels; the other countries of the United Nations begin helping
228 to address the climate crisis, following in the footsteps of Bangladesh. Ratul hears the voice
229 of the Old Man of the Winds, who tells him that he has been successful in saving the world.
230 This is more than a narrative statement; it is a clear statement to the audience that their
231 actions have the potential to make a real impact.

232 **Environmental discourse analysis**

233 How film characters deal with environmentally catastrophic issues is part of what
234 viewers imitate and can be influenced by in a film. These two films exhibit several major

235 environmental themes, including the concept of unspoiled nature, the sense of place,
236 pollution, deforestation, and land erosion.

237 Environmental discourse analysis has been adapted and developed from several
238 branches of social sciences, primarily anthropology, and is therefore inherently multifaceted.
239 Adrian Peace (2018) explains that “academic disciplines go about their interrogation of
240 discourse in different ways” (p. 415), but in general describes discourse as “specific ways of
241 talking about particular environments and their futures” (Mühlhäusler and Peace, 2006, p.
242 458). A social anthropologist, for example, “become[s] familiar with the natural discourses
243 local people draw upon to describe environments of greatest significance to them” and in this
244 way contributes to environmental discourse analysis by highlighting environmental discourse
245 on a local level (Peace, 2018, p. 415). Peace (2018) is a social anthropologist, but there are
246 many historians, political scientists, or communication studies researchers who examine
247 power abuse, inequality, and other significant concerns within the social and political
248 environment. The many discourse analysis techniques cannot be summarized in this brief
249 space, but all approaches, at least to an extent, view language as a social practice and
250 discourse as pertinent to the broader social order. This research aims to complement the
251 broader discourse by providing valuable empirical insights. By examining the empirical
252 findings alongside the existing discourse, it contributes to a comprehensive understanding of
253 the reception and impact of climate-change media. Thus, this study recognizes the relevance
254 of the ideological debate while highlighting the unique perspective offered by the empirical
255 analysis.

256 Mühlhäusler and Peace (2006) underscore that “[m]uch environmental discourse
257 elaborates the theme that human actions are detrimental to the survival of humanity” (p 461).
258 My analysis correspondingly highlights the irreparable damage that humanity is contributing
259 to the environment which viewers witness within the selected films. Mühlhäusler and Peace

260 (2006) speculate that it is yet unknown how much the environmental discourses and
261 metadiscourses improve the condition of the environment (p. 457). Environmental discourse
262 analysis can show which narratives instil feelings of hopelessness, apathy, and inaction in
263 viewers. Conversely, environmental discourse analysis may highlight narratives about
264 environmental issues and matters of environmental justice that give the viewer a manageable
265 sense of alarm, spurring them to act before it is too late. In “Envisioning A Sustainable
266 World,” sustainability scholar Donella Meadows (1994) regrets, “Whatever the reason,
267 hardly anyone envisions a sustainable world as one that would be wonderful to live in” (p 2).
268 She is hopeful nevertheless, “I have noticed, going around the world, that in different
269 disciplines, languages, nations, and cultures, our information may differ, our models disagree,
270 our preferred modes of implementation are widely diverse, but our visions, when we are
271 willing to admit them, are astonishingly alike” (1994, p. 4). Two different movies from two
272 different parts of the world with two different senses of place both demonstrate a singular
273 desire to save the world from environmental catastrophes.

274 **Analysis of public reactions to the films on Twitter and YouTube**

275 The films *The Lorax* and *Tomorrow* engendered the formation of publics, aligning with
276 Michael Warner’s (2002) conceptualization. These publics emerged through self-organization
277 as individuals voluntarily congregated around a shared interest in the films’ environmental
278 themes. Online discussions and interactions epitomized relations among strangers within the
279 public sphere, where personal and impersonal address intertwined. The collective attention
280 devoted to these films and the reflexive circulation of discourse on social media platforms
281 fostered a dynamic social space for the shaping of public opinion and reception. Valuable
282 insights into the dynamics of these publics and their role in the discourse surrounding *The*
283 *Lorax* and *Tomorrow* are possible by integrating Warner’s conceptual framework.

284 In the context of the public who commented on social media platforms, Michael
285 Warner's (2002; p. 50) concept of a public as "a space of discourse organized by nothing
286 other than discourse itself" holds significant relevance. The individuals who engaged in
287 discussions and expressed their opinions on platforms such as YouTube and Twitter can be
288 seen as actively participating in the creation of a public space through their discourse. Their
289 comments, reactions, and interactions constitute the very fabric of this discursive space,
290 where ideas, perspectives, and sentiments are exchanged and circulated.

291 Warner's (2002) notion of a public being "autotelic," existing as the purpose and
292 outcome of the discursive activities it encompasses, aligns with the understanding of social
293 media platforms as spaces where public discourse takes place. The act of addressing and
294 responding to one another's comments on these platforms contributes to the formation and
295 sustenance of the public sphere. The comments made by individuals reflect their engagement
296 with the films and the issues they address, shaping the broader discourse surrounding climate
297 change and environmental themes. Public comments are not just isolated individual
298 expressions but collectively contribute to the discursive space of public reception.
299 Understanding and analyzing these comments provide insights into the perceptions,
300 interpretations, and responses of the public, shedding light on the dynamic nature of public
301 engagement with climate-change media.

302 The audience is a key part of the environmental discourse equation, and these two
303 films generated many positive reviews on the social media pages related to the films.
304 Audiences' reactions to media are important to understand so that artists, activists, and
305 academics may even more effectively contribute to environmental awareness. Despite this
306 clear need, some scholars caution that we lack sufficient knowledge regarding how audiences
307 react to environmental communication, calling for more such studies (Kluwick, 2014;
308 Garrard, 2014, p. 20). Solitary public comments on social media may be inconsequential on

309 their own, but together, they are important to understand public reception. Unlike formal
 310 media, informal social media is often free from the traditional trappings of media criticism;
 311 the opinions on social media are often that of laypeople who are concerned with different
 312 aspects of the film than a professional critic would be. Furthermore, the opinion of a friend or
 313 family member on social media may have more impact on someone than that of a distant
 314 critic whom the reader does not know. Social media comments are not a perfect stand in for
 315 an “average” opinion of the film, as social media posts come with their own biases, and there
 316 are economic and geopolitical factors that affect who is able to access the internet, and by
 317 extension social media platforms.

318 I manually examined each of the selected 1510 public comments about *Tomorrow*
 319 (beginning with the comment with the most “likes” (1.4K), ending with those with just one).
 320 The most-liked comment states that *Tomorrow* is a locally made film with a global
 321 international standard that carries an environmental narrative. The most-liked comments after
 322 that are about the quality of the film and that it deserves international accolades. The major
 323 seven environmental discourses derived from such public comments are presented in Table 1.

324 **Table 1: Example of YouTube Comments from *Tomorrow***

325 *(Arranged by total number of likes in sample)*

Discourse	Total number of likes of the combined comments	Total number of comments	Example of comments (These comments have been selected as fairly typical of the topic. Except for my translations, grammatical and spelling errors in comments have been left as is.)
Environmental education	1541	131	“It should be premiere in every School in Bangladesh ... It's the most Realistic animated short movie I ever seen!”
Climate change	1239	95	“This film ... [shows] examples of how climate change can affect us environmentally and as a community”
Sense of place	142	116	“Local places are getting destroyed because of global places” (my translation)
Environmental activism	191	88	“It’s our duty to save our world, to save our people to save the wildlife # stand Against fossil fuel 🍌

			# Raise awareness among all the people 🙌”
Environmental storytelling	189	309	“Story is beautiful...I love this story...”
Sustainability	152	158	“If we plants tree more, one day we get a beautiful Bangladesh. Let’s go we plants tree for a beautiful future”
Plastic/waste	110	29	“We should not destroy the environment by producing plastic” (my translation)

326

327 Public reactions juxtapose positive reviews of the content of the film with negative
328 statements about the current local and global environmental conditions. Online commenters
329 urge showing *Tomorrow* in all primary and secondary schools across Bangladesh while
330 encouraging elected officials to watch and screen it as well. This commentary connects with
331 the film narrative as the protagonist of *Tomorrow* is a schoolchild, who goes on an abridged
332 hero’s journey to affect global politics regarding environmental laws and policies.

333 The comments for *Tomorrow* demonstrate the power of locally produced media, an
334 aspect of the film which may prove valuable to other environmental communicators and
335 educators. Climate communication scholars Candice Howarth and Alison Anderson (2019)
336 highlighted that stronger collaborative bonds between local media and scientific research
337 helps form a more trusted relationship between local media and other local stakeholders and
338 increases engagement with climate change. Many comments express an emotional response
339 to seeing environmental destruction in their own localized area, for example, “Alas! My
340 home is in Hatia, the southern part of Bangladesh” (my translation). Since *Tomorrow* was
341 made in Bangladesh, it may create a greater local impact than if it had been produced in
342 Hollywood, or even Bollywood. Relatedly, Howarth and Anderson (2019) have noted that
343 climate change is often understood as “abstract and distant” (p. 718). *Tomorrow*, by contrast,
344 shows how climate change is an issue requiring both local and global action.

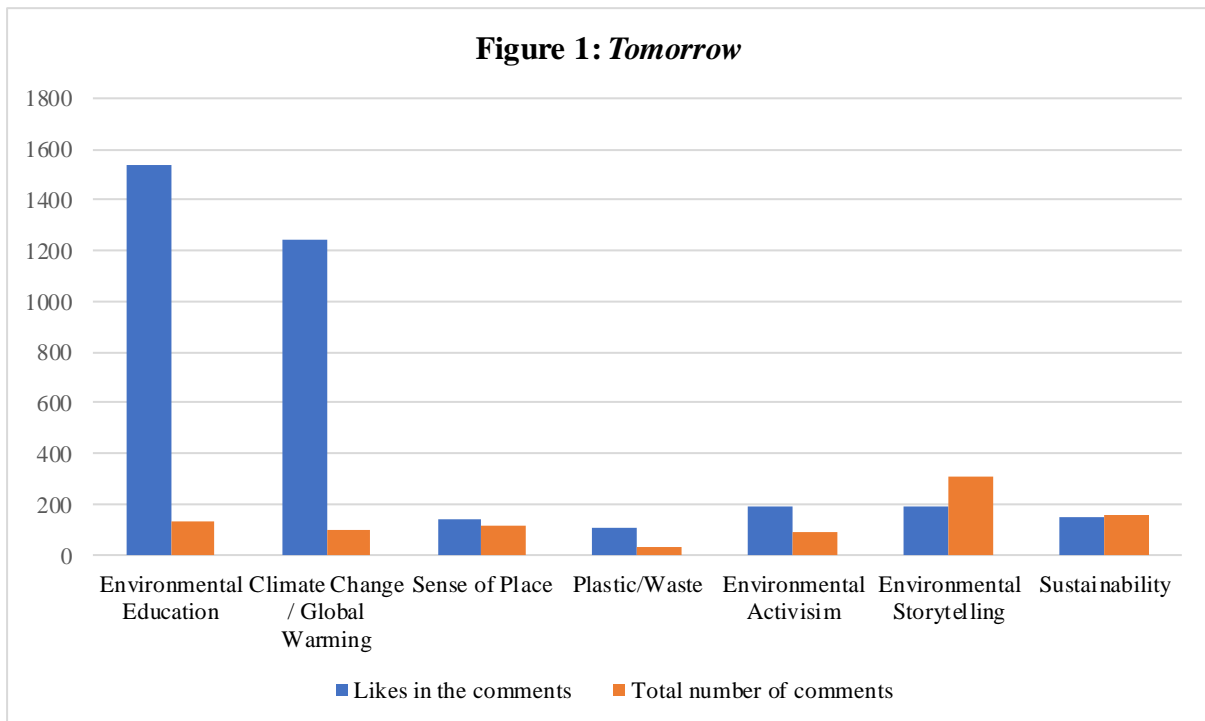

345 Earth’s restoration is possible only if we can imagine it clearly. Stories occupy an
346 important role in that ability. For all of us, stories matter; if we know our local story, That is

347 to say, how our local environment came to be, and how our actions alter it, especially through
348 local media, we can participate in a range of actions to restore our local landscapes. However,
349 the public of Bangladesh often do not believe that their elected officials will reduce the use of
350 fossil fuels on their own. Yet the movie instills civic hope in some viewers—comments like
351 “should the Prime Minister watch this movie, the country would benefit greatly” (my
352 translation) reinforce the position in the public discourse that the ordinary people of
353 Bangladesh do not trust the government to take adequate action. Intriguingly, this mirrors the
354 events of the film, where the government increases taxes on fossil fuels following public
355 outcry—showing that such a strategy is viable in the real world.

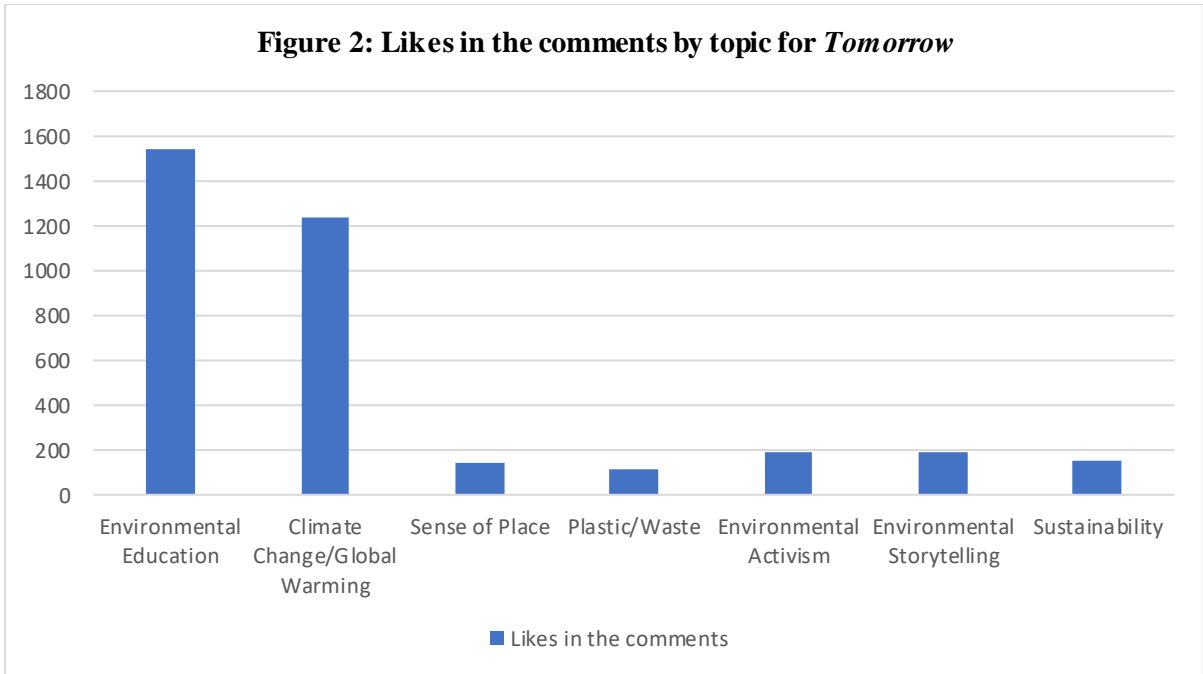

356 Public comments carry a sense of responsibility and an ethic of care. Commenters use
357 words and phrases such as “I cannot control my emotions,” “my eyes were moistened while
358 watching the movies,” “the Earth needs to be protected,” “save Earth, save Bangladesh” and
359 many more, to explain their sense of empathy and responsibility with local and global places.
360 These are virtual comments, yet this sense of awareness is exhibited, nonetheless. This is
361 again demonstrated when commenters give attention to the occasional hypocrisy or at least
362 inconsistencies in the story. They appreciate the protest against fossil fuels, and critique
363 Ratul’s flight on a fossil fuel–powered airplane; they appreciate the message about the
364 environment.

365 Regarding environmental activism, there were many comments such as “we each have
366 a responsibility to save the world,” and “all mass media ought to disseminate this film
367 massively to create public awareness regarding climate change... the UN must force a new
368 policy plan over the globe for building green planet again as soon as possible, avoiding
369 further environmental degradation. Let’s reduce fossil fuel usage, stop cutting trees by
370 planting more, ban the Rampal project, together heal the world, make it a better place.”
371 Comments emphasized the need to act locally, for instance, stopping the Rampal coal-based

372 power plant, located near the Sundarbans, a UNESCO World Heritage Site, which is causing
 373 an adverse impact on the Sundarbans' biodiversity and ecological conditions. The current
 374 administration built the power plant, ignoring feedback from both environmental experts and
 375 the masses. There was a collective effort to stop the project, but it went forward anyway.
 376

377
 378 Figure 1 shows the relationship between the total number of comments by topic in the
 379 sample alongside the total number of likes for that topic. A high like bar indicates many likes,
 380 the easier of the two participatory actions. Total comment bars tend to be lower as
 381 commenting is harder; the higher an orange bar, the greater the desire to perform deeper
 382 participation. The ratio between the two shows how well comments are received.

383

384

385

386

387

388

By focusing on the individual aspects covered in the above chart, we can better see what engages online commenters. Of special significance is the generation of likes for Environmental Education topics in comments, which is over 14 times higher than the lowest topic measured, that being plastic/waste. Similarly, Climate Change / Global Warming performed well as a topic for this movie in the comment topics.

389

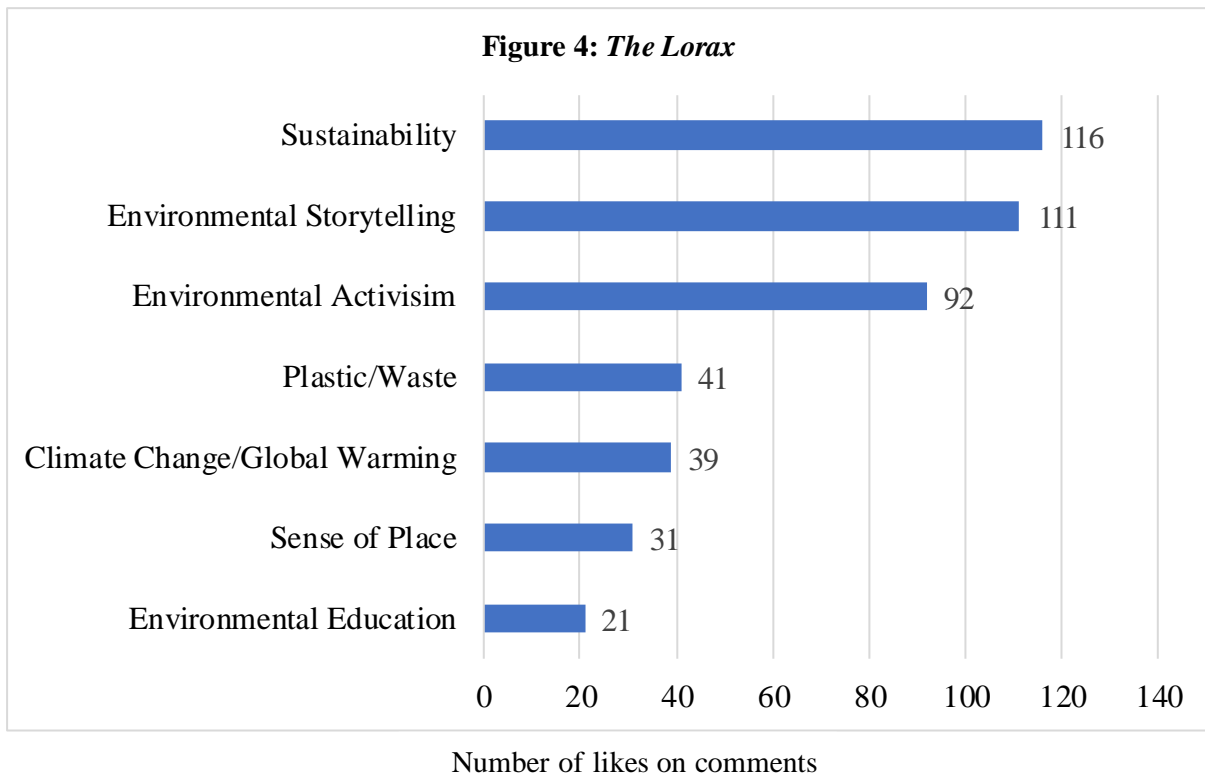

390 Figure 3 however shows that the comments that receive the most engagement with
391 likes is a minority, with the majority of comments focusing on topics related to
392 environmental storytelling. This provides some insight as to which topics are most likely to
393 incite a user to act, if we assume that writing and posting a comment is more effort than
394 liking a comment. It also potentially highlights a worrying disconnect between those who are
395 the most likely to get involved, and the broader online public.

396 Public comments demonstrate two major demands. First, this film should be
397 disseminated more widely, including being translated into English and other languages. (The
398 film was indeed later translated into other languages.) People from outside Bangladesh
399 should know that the Bangladeshi film industry can make a film that meets international
400 standards, and people from everywhere should be aware of climate change and become active
401 in civic discourse to hold their leaders to account. Second, common people should
402 engage in environmental activism and take peaceful civic action. The film suggests imposing
403 taxes on fossil fuels and investing in renewable energy, solutions echoed in the comments:
404 the public—individually and collectively, locally and globally—want to create and contribute
405 to a broad environmental movement.

406 The commenters exhibit a sense of urgency to create a sustainable planet Earth, as
407 well as their local environment. The tax solution to climate found in *Tomorrow* is also found
408 in comment analysis: online commenters want to create a movement to combat climate
409 change and plastic production. This shows that the calls to action given by the film in both its
410 visual and narrative storytelling were effective in at least inspiring viewers to comment on
411 their desire to act.

412 The public reactions to *The Lorax*, based on 1000 tweets, are similar to, yet distinct
413 from, those to *Tomorrow*. For example, “The Lorax is a cinematic masterpiece” and similar
414 comments show the widely shared opinion that the film had a high production value and was

415 enjoyable. As was the case with *Tomorrow*, the public reaction was also emotional for *The*
416 *Lorax*—the public cannot tolerate injustices and environmental destruction, even in fiction.
417 Table 2 and Figure 4 demonstrate the major environmental discourses coded from the public
418 comments, and the counts of these comments. Note that Netlytic derived Twitter comments
419 excluded “likes,” thus the exclusion compared to Table 1.

420
421
422 Figure 4 illustrates that that *The Lorax* commentors responded with likes mostly to
423 sustainability and environmental storytelling, with environmental activism also performing
424 well. Notably, environmental education exhibited the lowest performance here, whereas in
425 *Tomorrow* it performed the best. Climate change/global warming also performed much worse
426 for *The Lorax*, although this may be more easily explained by *The Lorax* only showing
427 ecological collapse, and not the explicit threat of real-life climate change.

428

429

Table 2: Examples of Twitter Comments from *The Lorax*

430

(Arranged by total number of comments)

Discourse	Total number of comments	Examples of comments
Environmental education	21	“y’all are getting literal degrees and careers still not believing in climate change. my 2 year old sister understands climate change and all she did was watch the Lorax.”
Sense of place	31	“I am the Lorax and I speak for the trees Save the Amazon, or I’ll break your knees.”
Climate change	39	“#Earth #water The biggest issue of our time #climatechange #unless ‘Unless someone like you cares a whole awful lot, Nothing is going to get better. It’s not.’
Plastic/waste	41	“i am the lorax and i speak for the trees litter again and i’ll break your fucking knees 😁”
Environmental activism	92	“@JohnBrennan @tedcruz He read Green Eggs and Ham on the Senate floor. I read the book to my 3 children countless times. Can I be a Senator from Texas now? The Lorax is the finest Dr. Seuss book and when Senator I will read that on the Senate floor.”
Environmental storytelling	111	“It is a very deep and inspirational movie ... I truly think it should have won movie of the year in 2012. It has changed my life for the better. This post is not satire.”
Sustainability	116	“The Lorax are we planting more trees — In sha Allah, many more 🌟❤️ https://t.co/evJu2P0iIb .”

431

432

The most frequent subject of public comments relates to the multifaceted issue of

433

sustainability. The audience knows that online activism can be an effective tool for creating

434

political pressure and social action. An example of a commenter calling for social action is as

435

follows:

436

“As the wise Lorax once said “Unless someone like you cares a whole awful lot,

437

nothing is going to get better. It’s not.” On Saturdays, join us for a Self-Guided Beach

438

Cleanup. Make a difference in as little as two minutes. <https://t.co/lUpXKlmoy3>

439

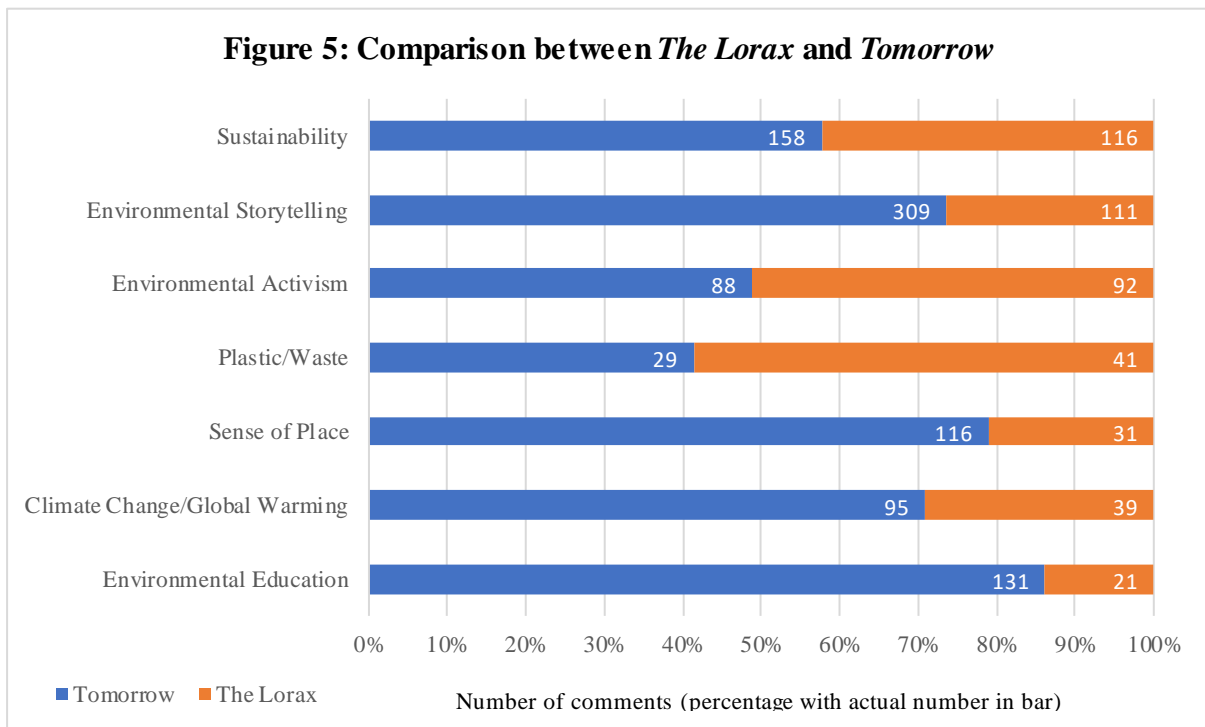

#volunteer”

440

Perhaps the environmental storytelling used by the films is why commenters actively ask for

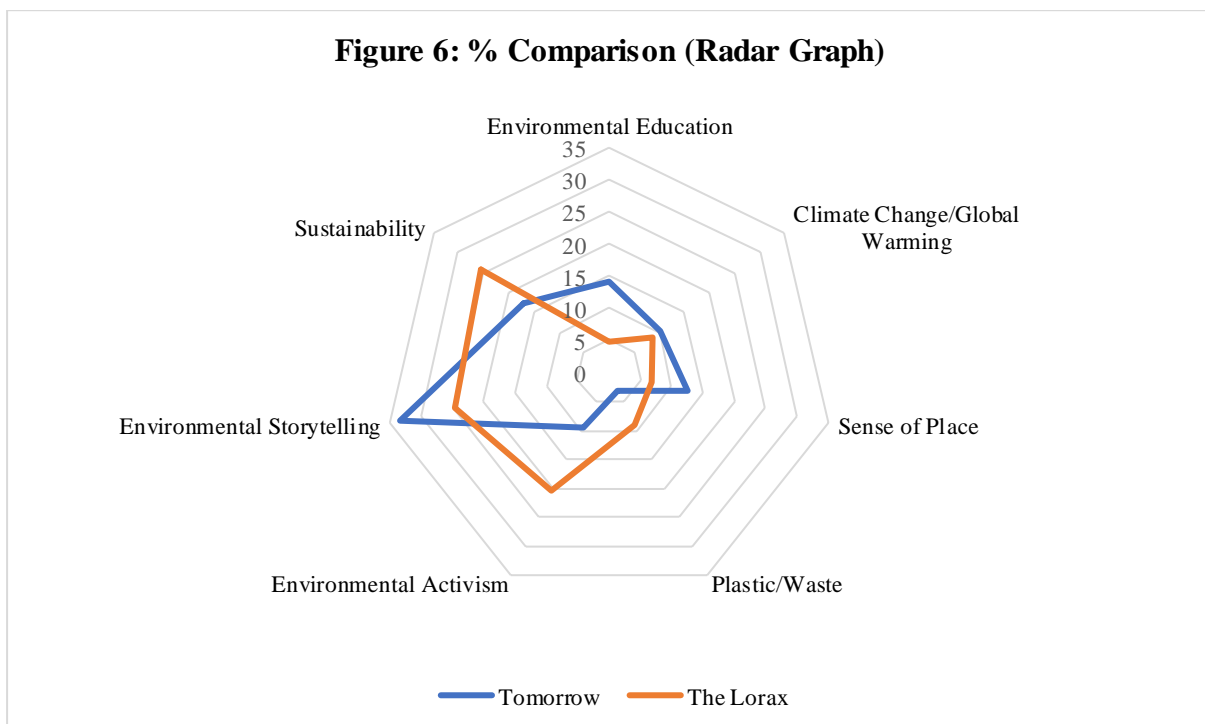

441

initiatives aimed at reducing the plastic impact.

443

444 Figure 5 compares the terms found in the environmental discourse seen within the
 445 public comments. Since *Tomorrow* has more analyzed comments (1510), it appears higher
 446 than *The Lorax* (1000) in all discourses when directly comparing raw data. Figure 6 therefore
 447 compares the percentage of comments by coded subject.

448

449 Today's academic environmental activism draws inspiration from Thoreau, Muir,
450 Leopold, and Carson, among others, with this academic discourse indirectly influencing ideas
451 found in public activism through the broader environmental movement. *Walden* (1854) laid
452 the foundation of modern-day activism because Thoreau coexists with nature. Muir's
453 establishment of the Sierra Club and encouraging ordinary people to explore Yosemite
454 Mountain shows activism. Leopold (1986) considers the land as a teacher and emphasizes the
455 restoration of land is an enduring example of environmental activism. Leopold (1986)
456 remarks, "A thing is right when it tends to preserve the integrity, stability, and beauty of the
457 biotic community. It is wrong when it tends otherwise." Carson's (1962) *Silent Spring* is
458 enduring because it shows women's activism contrary to men's, and it demonstrates her bold
459 statement against the patriarchy, which is responsible for pesticides and insecticides. In
460 addition, like *Silent Spring*, Wolfe (2008) argues that *The Lorax* warns of a present danger
461 and a rapidly approaching future. Comment activity demonstrates that the public also relates
462 race, ethnicity, and gender with environmental activism. Some comments contend that *The*
463 *Lorax* is racist and sexist because the Lorax speaks for only for certain trees, as exemplified
464 by the comment "Quick question: is the Lorax racist against certain trees? He just seems like
465 the type" (Username Expunged) and some believe Audrey should have been the protagonist
466 instead of Ted. Despite the fact that online commenters presumably do not often have
467 backgrounds in academia, it is notable that a casual informal understanding of
468 intersectionality is sometimes seen within the comments. In the United States, campaigns
469 about environmental justice have been historically intertwined with race, class, and gender.
470 For instance, environmental historian Nancy Unger (2012) has written about how women
471 often interact more closely with their local environment than men do. Similar to the work of
472 Unger, African American cultural geographer Carolyn Finney (2015) addresses
473 environmental justice in *Black Faces White Spaces*. Finney reviews the history of African

474 American engagement with the mainstream environmental movement from the early 1900s to
475 the present. Finney focuses on how African Americans are excluded from the environmental
476 justice movement, but she espouses the human experience of the story. Public comments tend
477 to deconstruct the hegemonic racist elements, if informally.

478 When analyzing the discourse of any text, through skip-grams, bigrams, or n-grams, a
479 word association network prioritizes word-by-word analysis. Methodologically speaking, a
480 single analysis of just one of these graphs could be highly misleading – they must be
481 interpreted together, and with context of the films, to avoid making inferences which are not
482 based in reality. For example, methodologically, the value of “Lorax” appearing in a word
483 frequency table so much should be discounted, because the use of the word could plausibly
484 refer to the film, the book, the old television episode, or the character himself. However, by
485 viewing the other graphs, enough context can be gleaned to provide cautious insight.

486 For *The Lorax*, the word-frequency table demonstrates the top word counts of the
487 selected tweets, in which the word “Lorax” appears in nearly 800 tweets while “Once-ler,”
488 the least common term on the list, is in many fewer tweets. However, the count for the word
489 “Lorax” is included below to provide greater context for a later skip gram analysis. Because
490 of the discounting of the word “Lorax,” the most significant term here is perhaps “like”
491 which while not a perfect indicator, generally indicates positive sentiment in conjunction with
492 the relatively high-ranking word “good.” This is especially noteworthy when compared to the
493 lower ranked word “bad” (which may also be affected by its heavy use in the fan favorite
494 song “How bad can I be?”). The word “trees” appears to be relatively highly ranked,
495 indicating strong environmental sentiment in viewers. While the use of the Truffula tree as a
496 movie plot point could contribute to this word being highly ranked, however since the
497 Truffula Tree is a fictional proxy for the overall environment, this inference is appropriate.
498 Finally, the pair of words “watch” and “watching”, while individually ranked lower on the

499 graph, would jointly rank higher, and are often used in comments to indicate personal

500 interaction with the film itself. One example comment illustrating this as follows:

501 “@ (Username Expunged) Hey lol, wanna watch the lorax together 🤝👉”

502

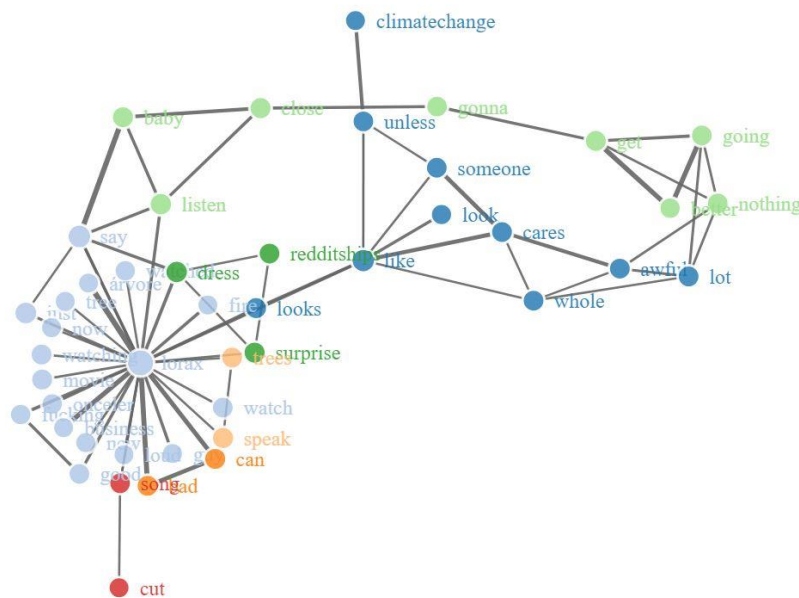

503

Figure 7: Top word count for *The Lorax*

504
505
506
507
508
509
510

Figure 8: Skip-gram for *The Lorax*

511

512 For *The Lorax*, the skip-gram count network exhibits the following word chunks. This
 513 skip gram is centralized around “the Lorax” with a cluster influenced by the phrase “unless
 514 someone cares a whole awful lot.” While in the previous example, the term “Lorax” should
 515 be discounted, here the related words show a roughly even split between discussion of the

516 movie itself or the character to these ideas, making it more useful within this context
517 compared to the previous figure. For the roughly half of instances which emphasize the
518 narrative of the film over the movie itself, this is linked with the environmental discourse
519 regarding climate change. Other notable words are revealed by the skip-gram word count,
520 including “redditships,” referring to offsite discussion of non-canonical romantic relations
521 between characters, and “dress,” which can perhaps be explained by the distinctive clothing
522 worn by the characters. In the skip-gram, the word “dress” is directly connected to the word
523 “redditships”, indicating a close and significant attachment to characters within the narrative,
524 and is also located (albeit indirectly) in close proximity to the word “looks”, which indicates
525 an emphasis on aesthetic value judgements. Perhaps factors such as fashion and the aspect of
526 potential romance between characters are also something to be considered when designing
527 new environmental media in order to improve audience engagement.

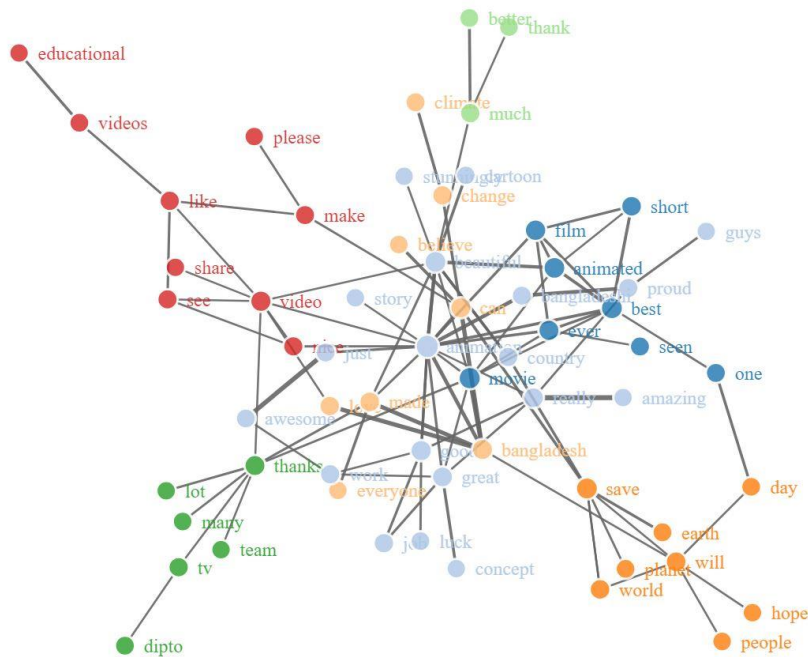

528 **Figure 9: Top Word Count for *Tomorrow***

529
530

531

Figure 10: Skip-gram for *Tomorrow*

532

533

534

For *Tomorrow*, the word-frequency table shows that “animation” is the most frequent

535

word that appeared, though this is perhaps affected by the discussion of the film industry in

536

Bangladesh. A number of online comments take nationalistic pride in a progressing film

537

industry in Bangladesh, using *Tomorrow* to exemplify advancing standards in domestically

538

produced computer animated films. Many of the highly linked words in the skip-gram

539

demonstrate the positive sentiment of the film and its content generally, such as “awesome”,

540

good, “great”, etc. It is notable that even though the word “Bangladesh” is ranked so high in

541

the top word count, the word “world,” while relatively low ranked among the top words, still

542

demonstrates a global consciousness among the online commenters. This is especially

543

illustrated by the skip-gram, where the word “world” is closely associated with the words

544

“hope,” “save,” and “planet.” Further analysis of the skip-gram count network for *Tomorrow*

545

reveals a more decentralized network when compared to *The Lorax*. This is potentially

546

influenced by the lack of a specific, unifying catchphrase in *Tomorrow*, whereas the central

547

“unless” catchphrase of *The Lorax* comprises a significant wordchunk.

548 **Environmental catastrophe**

549 *The Lorax* takes a social constructionist view of nature as the film explains that the
550 trees, the forests, have agency, but must act within a framework established by mankind—an
551 anthropocentric view. The Lorax, the guardian of the forest, thus establishes a space to
552 advocate for the rights of nature. The Lorax’s proclamation in the opening scene, “I am the
553 Lorax, I speak for the trees,” (0:00:56) establishes the role of the Lorax in representing nature
554 more broadly. The tone of the film is set by the deceptively bright city of Thneedville, set
555 against a foreboding sickly purple dawn. This city is one of artificiality, in which every entity
556 is made of artificial products: “a town without Nature, not one living tree” (0:01:24). In this
557 city, trees are made of plastic and their colors can be changed by clicking remote buttons.
558 Environmental pollution in the film is often implied through use of plastic, and the exclusive
559 use of synthetic materials instead of those found in nature. The artificiality of Thneedville
560 constitutes a major crisis in the film. Thneedville society takes capitalist pride in
561 commodifying nature: O’Hare informs Ted, “I make a living selling fresh air to people”
562 (00:31:19). Ted’s search for an original tree is a business threat to O’Hare’s company. Moore
563 (2016) explains the intimate relationship that exists between children, consumer culture, and
564 commercial media in the United States. Moore (2016) shows that both “the news and
565 entertainment industries reveal that the way Hollywood treats a subject like the environment
566 is not an exception to the rule; instead, the consistent subjugation of environmental concerns
567 is part of a broader capitalist logic in a concentrated market” (p. 5). This also connects to
568 real-life industrialists, as in when Frankfurt School critics Max Horkheimer and Theodor
569 Adorno (2007) discuss capitalist social structures, arguing that material identities are assigned
570 to nonmaterial cultures (perhaps also natural resources), commodifying them into the
571 products from which capitalists could profit. These natural resources are manufactured,
572 bought, and sold like a commodity. Environmental historian William Cronon (1996) has also

573 described the impact of nature as commodity not just in American culture and landscape but
574 in the entire planet Earth for centuries.

575 The excessive use of plastic and artificiality are symbols of late-stage capitalism. In
576 that regard, the opening song's lyrics stress the phrase "brand new" that references that we
577 live now in an advanced capitalist society which fetishizes consumerism: "If you put
578 something in a plastic bottle, people will buy it" (11:24). Commodification increases when
579 natural entities are treated without respect with some exceptions. The film implies that
580 Truffula trees are valuable and a positive, desirable asset, because by providing food, shelter,
581 and oxygen, Truffula trees help reduce environmental threats.

582 *Tomorrow* also presents the idea of nature, but it is not a socially constructed nature,
583 nor a nature that is soothing and tranquil. Rather, it emphasizes that reckless behavior from
584 humanity not only damages the environment, but also makes nature uninhabitable for
585 humans. Irresponsible human actions make the environment more vulnerable to future
586 damage. The village in *Tomorrow*, unlike *Thneedville*, is not artificial, yet its people lack a
587 sense of environmental consciousness just as in *The Lorax*, until Ratul's father joins the
588 conversation about the land erosion with the people. Their conversation and the conversation
589 between Ratul and the Old Man of the Winds change their attitude—they gain an
590 understanding of nature which make them proactive in slowing down the unfolding disaster
591 and envisioning—literally showing the audience—a future full of hope. Such a positive
592 narrative work against the idea that it is too late to act to prevent catastrophes.

593 Plastic waste is another environmental catastrophe on its own, which additionally is a
594 contributing factor to global warming, as plastic production and transportation require fossil
595 fuels. *The Lorax* shows the audience the impact of waste and wanton consumption on the
596 environment. The Lorax demonstrates that the process of wanton cutting down trees and
597 making clothes (fantastical knitting) out of it as a wasteful practice. But the Once-ler,

598 considers the result of this tree-cutting and knitting process “revolutionary.” The product has
599 a multitude of uses, and the audience may be inclined to agree at first, enhancing the impact
600 of this cautionary tale. “Whoa,” is Ted’s reaction when he steps out of the walled Thneedville
601 and sees the industrial waste. Thneedville produces a lot of waste but has no policy regarding
602 waste management beyond hiding it from public view; this is a reminder that the whole world
603 suffers from waste management policies that are effectively wishful thinking and likely
604 encourages the viewer to consider the impact of the industrial society fuelled by their own
605 wanton consumption. Industrial waste is also a critical theme in *Tomorrow*. In the dream,
606 when the Old Man of the Winds takes Ratul on a tour of the world, Ratul notices chimneys
607 spewing greenhouse gases in the atmosphere. The Old Man of the Winds instructs Ratul that
608 coal needs to be replaced as a source of energy.

609 Both *The Lorax* and *Tomorrow* encourage the viewer to foster a desire to protect
610 nature, albeit in different ways. *The Lorax* fosters a protective desire through Audrey’s and
611 Ted’s quest for Truffula trees, Grammy’s Indigenous sense of conservation, and the Lorax’s
612 mission to speak for trees. Although Wolfe (2008) focuses on Dr. Seuss’s book, Wolfe’s
613 observation that, “[. . .] nature is elevated from inferiority to a form of divinity” is germane in
614 the context of film (p. 14). *Tomorrow* fosters love for nature by creating an awareness about
615 climate change and biodiversity.

616 **Environmental storytelling: sense of place**

617 These films deal with both place and displacement, important concepts in
618 environmental education. “The integration of place into education is important,” writes
619 sustainability scholar David Orr, as “knowledge of place where you are and where come from
620 is intertwined with knowledge of who you are. Landscape, in other words, shape mindscape”
621 (2013, p. 93). These films use storytelling show how human beings and animals are
622 displaced.

623 Storytelling is an important element in combatting large-scale problems such as
624 climate change. Stories lead to greater emotional attachment than raw data does. In looking at
625 the impact of stories, I return to Jonathan Gottschall’s (2012) statement, “we are, as a species,
626 addicted to story. Even when the body goes to sleep, the mind stays up all night telling itself
627 stories” (12). Cherokee author Thomas King’s (2003) statement, “The truth about stories is
628 that that’s all we are” (2) or environmental historian William Cronon’s (1992) statement
629 inspired by Graham Swift that human beings are “storytelling creatures” underscore the
630 importance of storytelling. But humans are not the only storytelling creatures; other animals,
631 plants, spirit beings are the storytelling creatures too. The tree, the land, the other non-human
632 entities have agency, and they are storytelling creatures too, as demonstrated in the films. In
633 *The Lorax*, although of course somebody else has to speak for those trees, they nonetheless
634 have agency, and in *Tomorrow*, the Old Man of the Wind is not human but rather a spiritual
635 entity. By incorporating non-humans into storytelling, these movies help combat human
636 supremacist attitudes, by showing that man cannot stand alone against environmental
637 collapse.

638 Movies cover important environmental features in the form of storytelling discourse,
639 which also encompasses the field of storytelling discourse aimed at children. Dolores Subia
640 BigFoot and Megan Dunlap (2006) note that “[s]tories give reason to the overall scheme of
641 things” (p. 134). *The Lorax* and *Tomorrow* carry an environmental storytelling tradition to
642 teach children a sense of place through stories (animated films are often aimed at children,
643 and teach both children and the parents; if children miss out anything, the parents can pick it
644 up). BigFoot and Dunlap (2006) suggest that “Parents, grandparents, and other relatives used
645 stories to help children understand their place in the world and how they could show their
646 gratitude for their existence” (p. 135). This is evidenced in the social media analysis, where

647 one commenter stated “my 2 year old sister understands climate change and all she did was
648 watch the Lorax”

649 Both films have a simple environmental storytelling trajectory, but that simplicity is
650 grounded within the place of each respective culture. *Tomorrow* focuses on a specific place
651 along the coastline of Bangladesh; *The Lorax* is a fantasy place that could be anywhere and
652 nowhere. If places are ecological and cultural, I would argue that the sense of place is linked
653 to the art of storytelling, ultimately linked to education and pedagogy. Orr (2013), for
654 instance, demonstrates the nexus between place and pedagogy. Orr’s understanding of place
655 as an educational tool emerges from Thoreau’s *Walden* (1854) (to be exact, “*Walden* is a
656 model of the possible unity between personhood, pedagogy, and place”) and conservationist
657 Leopold’s (1986) philosophy of “man as a biotic citizen.” Although non-human entities are
658 appropriated for our use, *Walden* (1854) emphasizes natural entities in a way that could help
659 contemporary culture be more sustainable, such as in issues like bottled water compared to
660 tap water. A similar perspective can be seen from Leopold, who draws us across time and
661 space by introducing ideas like the “land ethic” and asking human beings to think “like a
662 mountain.” These philosophies should be highlighted with a greater emphasis in popular
663 culture. By and large, these philosophies demonstrate how place plays a role in our moral and
664 psychic transformation. In *Tomorrow*, although commoners lack an academic or formal
665 understanding of place consciousness, they eventually show the unity and a sense of
666 belongingness needed to protect and preserve their local place. In *The Lorax*, the not-real
667 place still demonstrates influences from its Californian creators of 2012, such as general
668 heightened concern over environmental catastrophes like the 2011 Fukushima disaster in
669 areas on the Pacific. In the film, a child begins glowing a radioactive green as he sings “I just
670 went swimming, and now I glow!” (0:03:03). Stories with connections to place are important
671 as “[s]tories can give children a sense of belonging to their family, community, and tribe, and

672 this can instil a sense of purpose, identity, and hope. Stories could be an extremely positive
673 force in the life of children” (BigFoot and Dunlap, 2006, p. 5).

674 *The Lorax* and *Tomorrow* share the spectrum of life stories: as evidenced by online
675 comments such as “local places are getting destroyed because of global places,” these stories
676 can create a compelling connection between the storyteller and listener/spectators. These two
677 films are similar in that common people within the films are engaged to love their local
678 places. Initially, the Once-ler’s family is not respectful of the local place and environment,
679 but when the Once-ler gives Ted a seed to make the local place abundant with trees, the local
680 place matters. People rally around Ted for planting the seed, although they had almost been
681 convinced otherwise by O’Hare’s deceptive speech. In the same way, the common people
682 start a movement to save their village from climate crisis in *Tomorrow*. These are both ways
683 of showing place and action. In this way the audience learns from example how they may
684 avert their own climate catastrophes.

685 Storytellers can create a sense of connectedness with the stories. The Once-ler and
686 Ted’s grandmother serve as the role of storyteller. Granny initiates the storytelling session,
687 but she sends Ted to the Once-ler for firsthand experience. The Once-ler starts sharing the
688 story with “it all started a long time ago” (00:16:45). The Once-ler’s starting cue gives us a
689 sense of hearing a “once upon a time” story. He later uses the phrase “a long time ago,” at
690 least three times, hinting that the environmental destruction on Earth started a long time
691 before. As a storyteller, the Old Man of the Winds, in *Tomorrow*, appears in Ratul’s dream
692 and blames him for the deplorable condition of the planet. He takes Ratul away with him to
693 show the cruelty of people on nature: factories are emitting fumes and the use of fossil fuels
694 are resulting in air pollution, the greenhouse effect, and related human eco-sicknesses.

695

696

697 **Environmental education: sustainability**

698 Today, many animated films are incorporated into educational curricula because of
699 the impact they can have. *The Lorax* and *Tomorrow* are ideal candidates to be educational
700 tools for children as these films visually show (rather than just tell) fundamental
701 environmental problems and potential solutions. Both films can also be a platform to teach
702 children about preserving nature.

703 *The Lorax* and *Tomorrow* promote a world where sustainability and environmental
704 consciousness are prioritized over reckless economic and technological development. Both
705 films critique capitalism for setting society down a path of self-destruction. When Ted leaves
706 the town in search of the Once-ler, Ted is being watched on his way out by the corporate
707 enforcers of O'Hare, who report on anything that threatens their industrial progress. Progress
708 is the main goal for Thneedville's people. The Once-ler's mother rebukes him for not being
709 "successful." The Once-ler thus starts changing the world, but the spell of capitalism does not
710 fool the Once-ler forever, as he eventually recognizes the monstrous effects of unchecked
711 capitalism. In *Tomorrow*, Ratul learns about the impact of capitalism when he travels with the
712 Old Man of the Winds who shows him the advanced capitalist societies which are least
713 sustainable (even though some pretend to be). Ratul becomes conscious of the negative
714 aspects of the socio-political-economic nexus of capitalism, but he cannot remain free from
715 it. The films show the audience through visual storytelling what the consequences of life in a
716 capitalist society that reveres progress and success, and, later, how the lives of the people
717 within that society improve when environmental consciousness triumphs over the
718 commodities market.

719 The films both suggest that the destruction caused by unrestrained capitalism may be
720 averted through action. In *The Lorax*, Ted brings meaningful change by helping begin to
721 restore the environment. *Tomorrow* also offers solutions, such as imposing taxes on fossil

722 fuels and implementing green energy around the world. *Tomorrow* asks its audience “Are you
723 with us?” (20:55) and tries to create a sense of urgency to get its audience to act.

724 These films can help instill the idea that sustainability is more about actions rather
725 than just caring about nature. *Tomorrow* suggests an alternative to the present world by
726 showing a world occupied with environmentally responsible inhabitants; *The Lorax* suggests
727 a return to a more natural environment as an alternative to an artificially lavish life. These
728 alternatives are designed to preserve nature. It is important to note that these films do not
729 reject societal progress outright, but they oppose development rooted in industrial toxic
730 consumerism which can cause the displacement of millions of people and the extinction of
731 species.

732 Perhaps the most important characteristic for any educational tool is to leave a
733 discursive space. These films question their surroundings, the human interference with our
734 environment, the inevitable consequences of such interference, and they provide examples of
735 a remedy. *The Lorax* suggests it is “not too late”; that is, if people give up their
736 anthropocentric attitudes and seek harmony between nature and human, their doom can be
737 prevented. *Tomorrow* shows the need to be prepared for a calamity that cannot be evaded, but
738 also shows a glimmer of hope. It endows the audience with agency, when it tells Ratul, the
739 audience surrogate, “This is your planet, you have to find out the answer” (21:54). These
740 films leave unfinished tasks to be comprehended and finished by the audience.

741 These films also offer pedagogical opportunities because they convey their messages
742 through non-traditional formats such as social media, humor, song/rhyme, satire, etc. For
743 example, the song “How Bad Can I Be?” in *The Lorax* provides insight into the greed-driven
744 soul who avoids caring for a few trees in the desire to make money. In *Tomorrow*, there is the
745 presence of social media. Ratul starts campaigning on Facebook about fossil fuels from a
746 local place, and he receives global responses, as people from around the entire world protest.

747 **Conclusion**

748 Using environmental discourse analysis to understand how discourses about climate
749 change and sustainability, to list a few, are changing, is an important task. This is
750 acknowledged in the literature—Elliott and Cullis (2017) have written, “the humanities
751 should be more confident and vocal in addressing climate change” (p. 15). Although the
752 number of creative works on climate change is increasing, their growth is not as substantial as
753 the increase in risks we are encountering. Heise (2008) argues that “climate change poses a
754 challenge for narrative and lyrical forms that have conventionally focused above all on
755 individuals, families, or nations, since [climate change] requires the articulation of
756 connections between events at vastly different scales” (p. 205). Although it is challenging, the
757 most powerful environmentally driven artwork and films focus on local, regional, and global
758 riskscapes. The combination of these different scales described by Heise can be tricky, but
759 these films show it can be done. In *Tomorrow*, local action leads to global change, and in *The*
760 *Lorax*, action within Thneedville leads to improvements in the lands outside the city.

761 In *The Lorax*, as time passes, new trees begin sprouting, animals return, and the
762 repentant Once-ler joins the Lorax, everything in its proper place. The film ends with the note
763 that unless someone comprehends the awful consequences that awaits us and takes prompt
764 action, “nothing is going to get better.” *The Lorax* seeks to promote ecological awareness
765 among people showing the repercussions of their deeds “unless” they start taking care of the
766 environment. Film critics say that *The Lorax* is too political or scares children from the
767 environment by giving them “ecophobia” (Potts, 2019). Yet some are more hopeful, such as
768 critic Deidre Pike (2012), who deems *The Lorax* a “‘dialogic enviro-toon’ not presenting a
769 subject merely for entertainment but creating a safe zone for exploration of environmental
770 facts, ideas, images, and perspectives” (p. 13). Public commenters generally seem to agree
771 with Pike, and do not seem hindered by the message of *The Lorax*. Rather than them being

772 too political and ecophobia-inducing, I would argue *The Lorax* and *Tomorrow* have the
773 power to inspire the next Greta Thunberg in households around the world.

774 The uncertainty with which *Tomorrow* starts is a recurring theme throughout its entire
775 runtime. The film ends with a note of hope which environmentalist McKibben (2019) praises
776 in his tweet saying, “it never blinks at the horrors in store, but refuses to give up hope.”
777 Human beings are driving the great sixth mass extinction, but there is still time to take
778 initiative—a sentiment demonstrated in both the environmental discourses in the content of
779 these films and the public reactions. We need creativity, imagination and hope to face the
780 environmental crisis. The environmental discourse analysis of these films and the public
781 comments symmetrically convey the message: nature is on the brink of disaster in both films,
782 nevertheless both give the audience hope for the future.
