

Review_R2:

“Is transport of microplastics different from mineral particles? Idealized wind tunnel studies on polyethylene microspheres.”

The authors have successfully addressed the issues I raised and revised the manuscript accordingly, leading me to conclude that the manuscript is now suitable for publication, after technical corrections.

TECHNICAL CORRECTIONS:

- Title: I appreciate the updated title with the inclusion of ‘polyethylene’ for specificity. However, I suggest removing the dot at the end, as it seems unconventional.
- Tables: The caption of tables should be above the table, not below.
- Appendix: The formulas in the appendix lack numbering.
