

**EGUsphere 2023-1069 final version**  
**WRF-Comfort: Simulating micro-scale variability of outdoor heat stress at the city scale with a mesoscale model**

In revision 1, the authors fully responded to each comment in my review of the initial submittal and made appropriate changes in an excellent manuscript. The final version includes a small number of changes that I also consider acceptable.

Editorial comments (concerning text added to the final version):

1. Line 155. Please replace “microscales” with microscale.”
2. Line 165. Please remove the comma after “canopy” or match it with a comma after “fact.”
3. Line 167. Please remove the space after  $\sigma_u$  and either remove the following comma or add one after “therefore.” Please consider replacing “that” with “which.”
4. Line 228. Please consider “The map is oriented such that left is west and up is north; the size is 50x50 km.”
