10 **Figure S1: Aggregated mean Euclidean distance of raw reflectance spectra per field between all samples (all variable), between samples at same time and point but different depths (fixed: time and point, variable: depth), between samples at same point and depth but different sampling times (fixed: point and depth, variable. Time) and between samples at the same point but different depth and sampling times (fixed: point, variable: depth and time)**

15

Figure S2: Frequency of applied pre-processing steps to obtain the best model for SOC, total C, total N, POXC and pH for datasets of the six fields and a combined general (All) dataset. Window widths from 5 to 51 were tested. SG = Savitzky-Golay filter (m =

order of derivative, w = window width), SNV = standard normal variate, GSD = gap segment derivative (m = derivative, w = window width, s = segment size), MSC = multiplicative scatter correction
