**Table S1.** WRF-Chem model set-up and selected parametrization schemes.

WRF-Chem Configuration	Description
Microphysics	Morrison double-moment scheme
Longwave radiation	Rapid Radiative Transfer Model (RRTM) longwave scheme
Shortwave radiation	RRTMG shortwave scheme
Boundary-layer physics	Mellor–Yamada Nakanishi and Niino 2.5 level (MYNN2)
Convective parameterisation	Grell 3D ensemble scheme
Land-surface interactions	Unified Noah land-surface model with urban canopy model
Surface layer	MYNN surface layer

**Table S2.** Details of open-access observation datasets used in this study for model evaluation.

Dataset / Network	Access link (Last access: 30 December 2022)
IEM-ASOS Network, Iowa Environmental Mesonet- Automated Surface Observing System	<a href="https://mesonet.agron.iastate.edu/request/download.phtml?network=IN_ASOS">https://mesonet.agron.iastate.edu/request/download.phtml?network=IN_ASOS</a>

**Table S3:** The statistical metrics used for model-observation comparison in this study

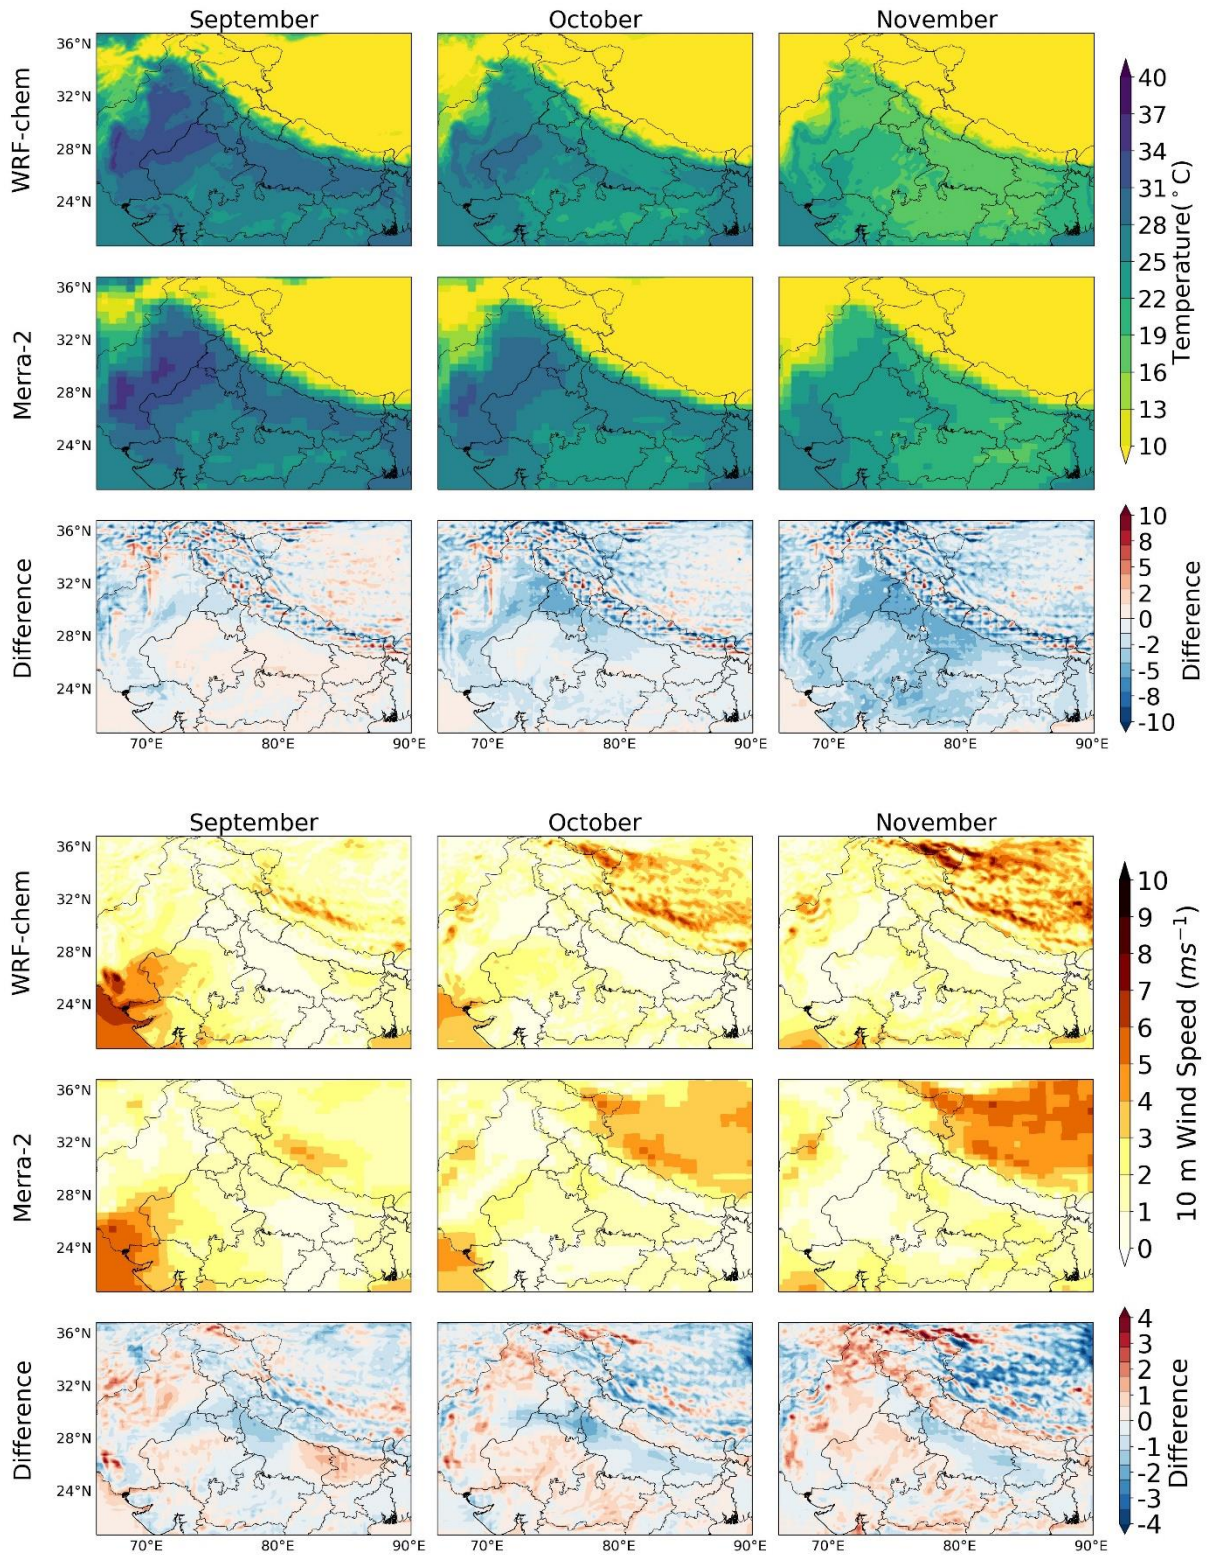

Mean Bias (MB)	$\frac{1}{n} \sum_1^n (M - O)$
Normalized mean bias (NMB)	$\frac{\sum_1^n (M - O)}{\sum_1^n (O)}$
Mean absolute error (MAE)	$\frac{1}{N} \sum_{i=1}^N  M_i - O_i $
Root mean square error (RMSE)	$\sqrt{\frac{\sum_1^n (M - O)^2}{n}}$
Pearson's Correlation coefficient ( $r$ )	$r = \frac{\sum_{i=0}^N (M_i - \bar{M})(O_i - \bar{O})}{\sqrt{\sum_{i=1}^N (M_i - \bar{M})^2 \sum_{i=0}^N (O_i - \bar{O})^2}}$

Site Name	Longitude	Latitude	Elevation / m

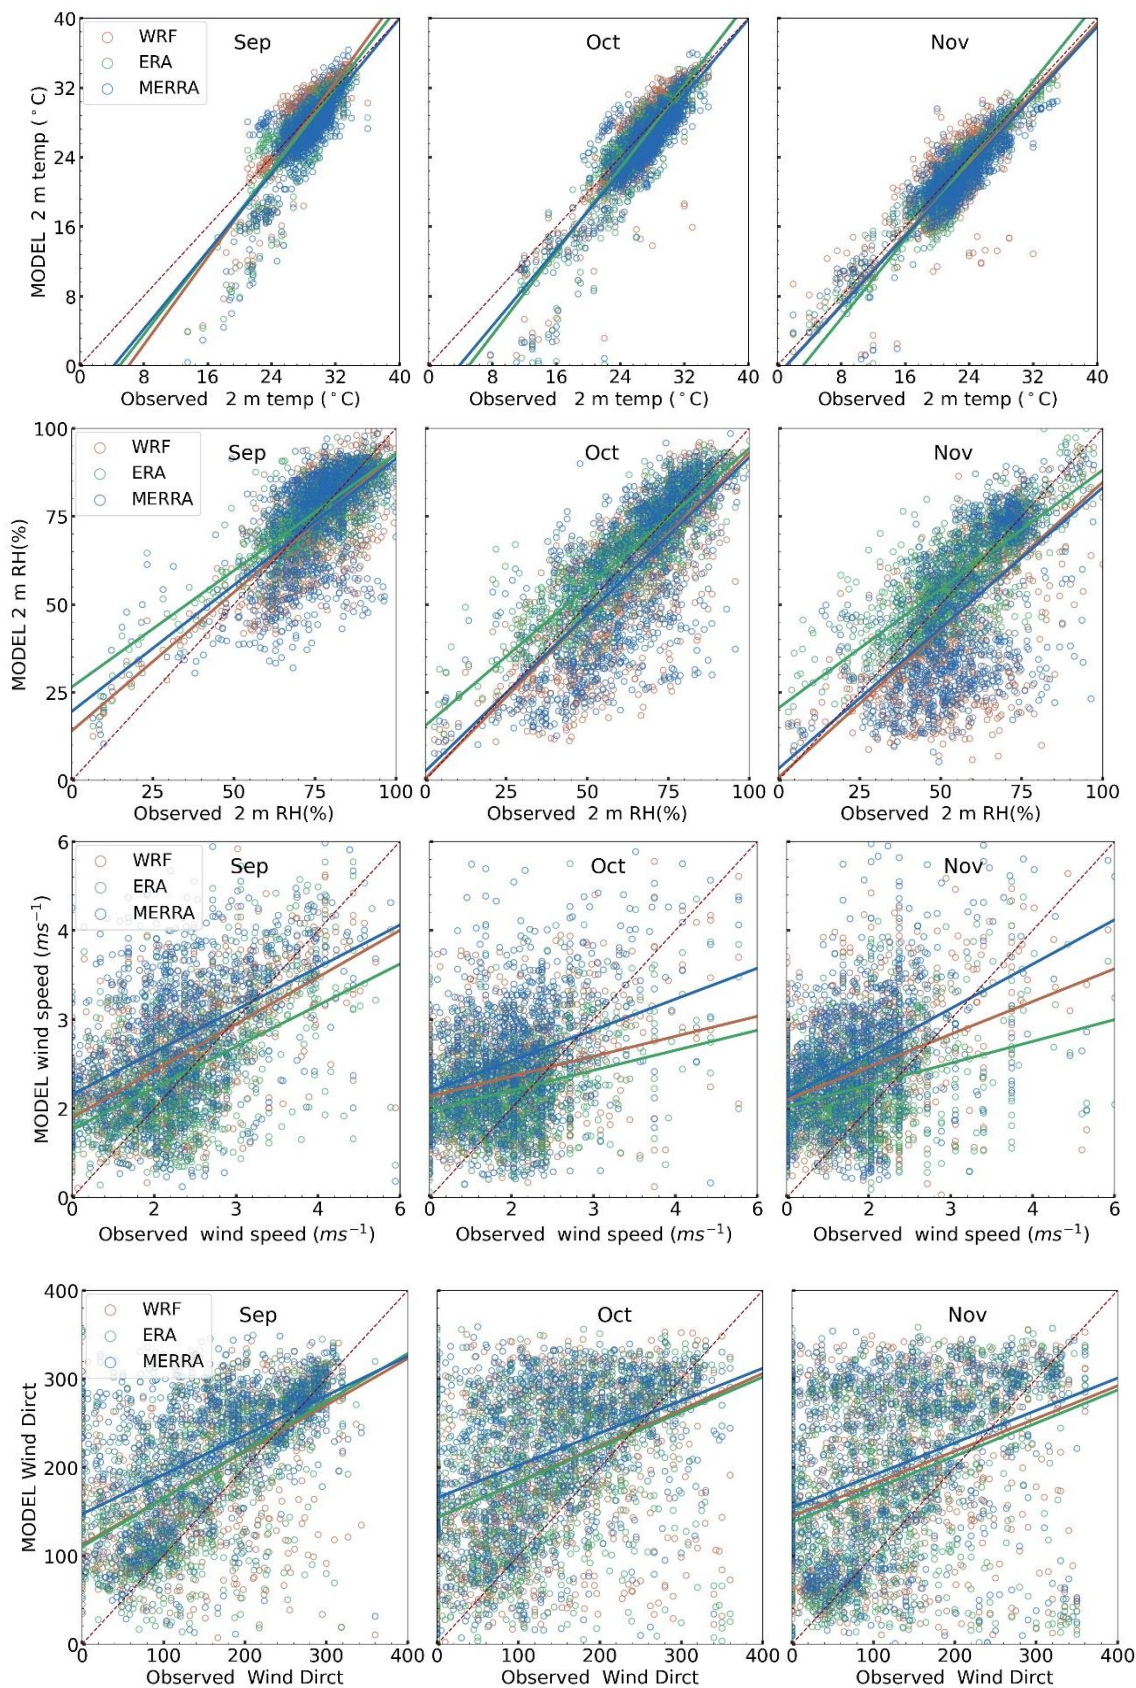

**Figure S1.** Comparisons of spatial distribution of monthly mean a) 2-m temperature and b) 10-m wind speed between WRF-Chem and MERRA-2 data for September to November 2016. The bottom row in a) and b) show the WRF-Chem minus MERRA-2 absolute differences.

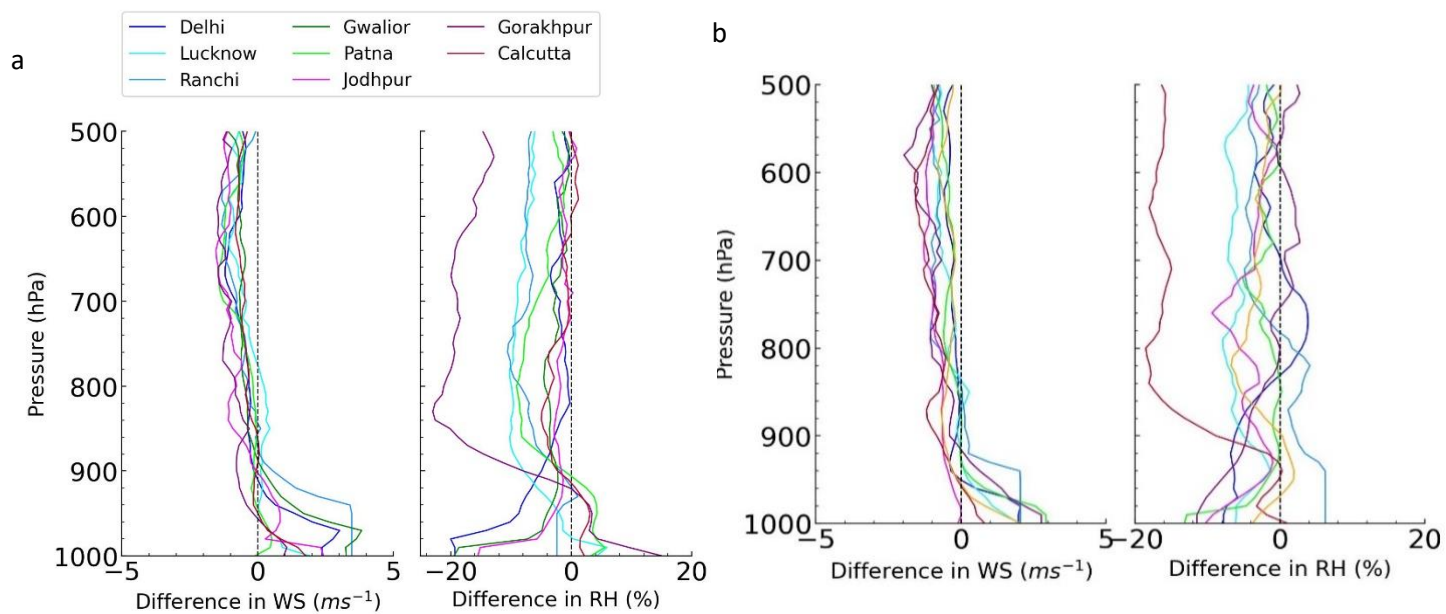

**Figure S2.** Comparisons of spatial distribution of monthly mean a) surface water vapor mixing ratio and b) PBLH between WRF-Chem and MERRA-2 data for September to November 2016. The bottom row in a) and b) show the WRF-Chem minus MERRA-2 absolute differences.

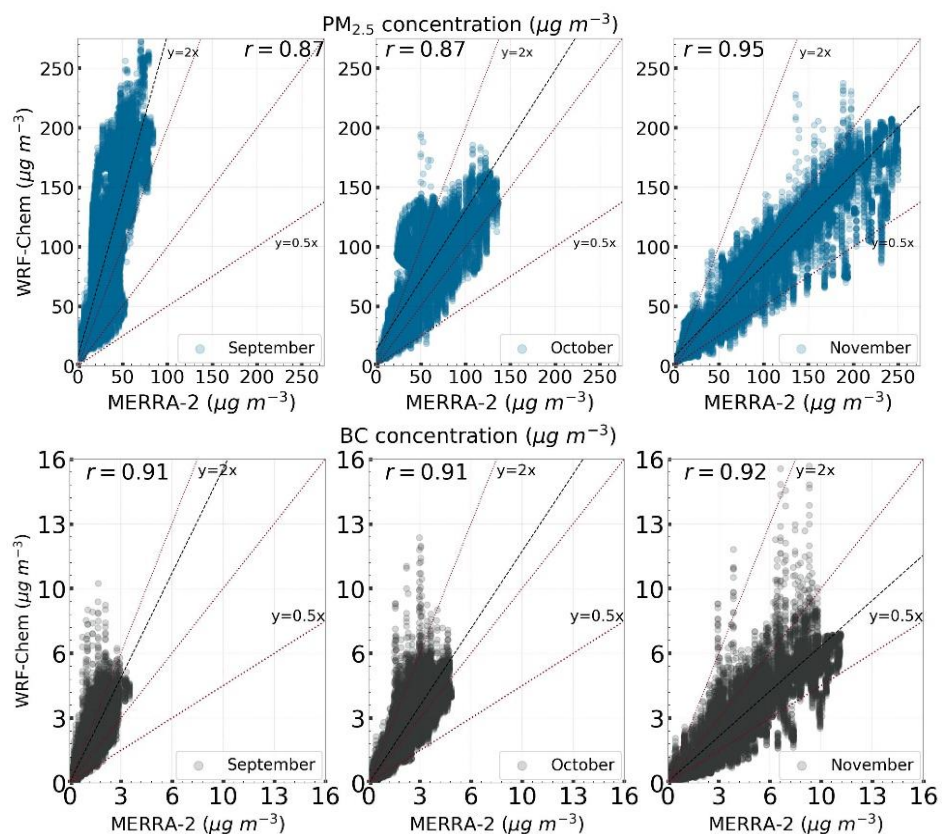

**Figure S3.** Scatter plots of daily mean measured and modelled surface meteorology variables derived from ERA-5, MERRA-2 and WRF-Chem across the 49 ASOS measurement sites for each of the 3 months of the study period: 2 m temperature, relative humidity (%), and wind speed ( $m s^{-1}$ ). The 1:1 line is shown as red dashed.

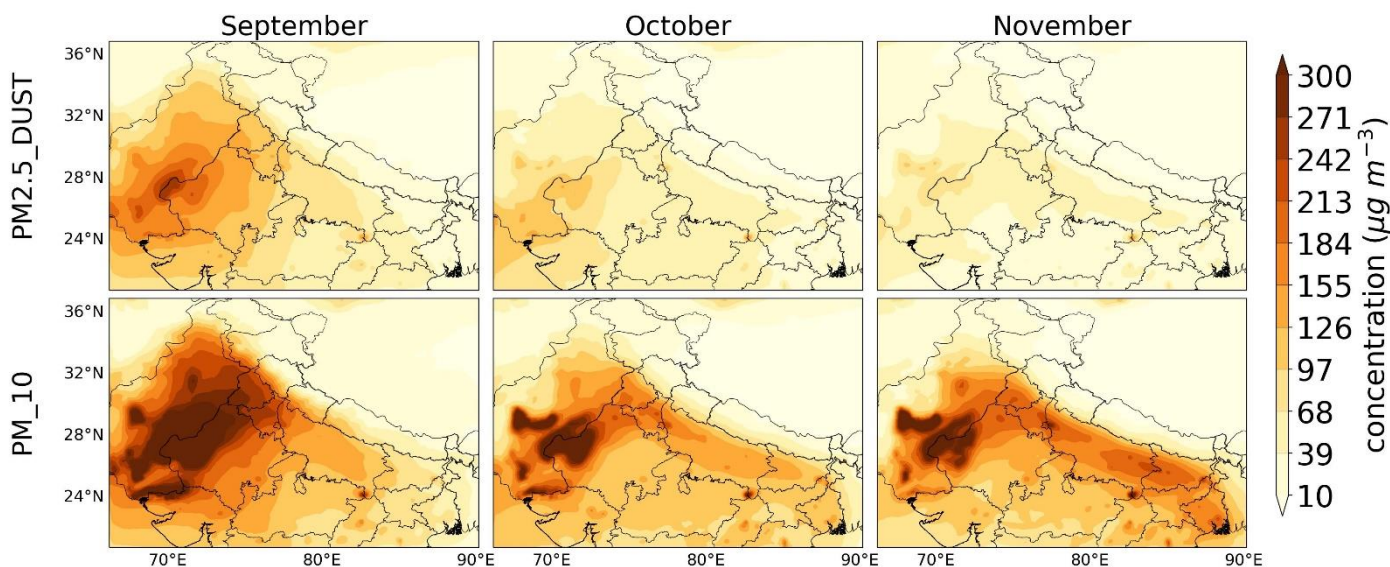

**Figure S4.** Difference between model and radiosonde vertical profiles at all RAOB sites at a) 00 UTC (5.30 IST) and b) 12 UTC (17.30 IST) for wind speed, WS (first panel) and relative humidity, RH (right panel).

**Figure S5.** Scatter plots for comparisons of spatial distribution of monthly mean concentrations ( $\mu\text{g m}^{-3}$ ) of  $\text{PM}_{2.5}$  (top) and black carbon (bottom) from the WRF-Chem model and MERRA-2 from September to November 2016. The 2:1, 1:1 and 1:2 lines (red dashed lines), the best-fit line (black line) and Pearson's correlation coefficient  $r$  are also shown for each month.

**Figure S6.** Spatial distributions of modelled monthly mean concentrations of the dust component of  $\text{PM}_{2.5}$  (top row) and of  $\text{PM}_{10}$  (bottom row) for September to November 2016.
