

## 2 Supplementary figures

Supplementary Figure 1: RMS amplitude time series, for the SPSM band (0.2-0.4 Hz), of the
seismic signal recorded by the vertical component of 4 stations located along the Maltese
coastline (a), in Linosa Island (b), in the southern part of Sicily (c) and in Central Italy (d) (see
Figure 2a for the station locations).

Supplementary Figure 2: RMS amplitude time series, for the PM band (0.05-0.07 Hz), of the
seismic signal recorded by the vertical component of 4 stations located along the Maltese
coastline (a), in Linosa Island (b), in the southern part of Sicily (c) and in Central Italy (d) (see
Figure 2a for the station locations).

Supplementary Figure 3: Spatial and temporal distribution of the RMS amplitude for the PM band computed at 105 stations considered (dots). The colors of dots represent the RMS amplitude as specified in the color bar. The blue, green and red contour lines represent significant wave heights of 3, 4 and 5 m, respectively, while the red five-point star in (c) indicates the eye position of the sub-tropical system Helios obtained from satellite images.

Supplementary figure 4: Spatial and temporal distribution of the RMS amplitude for the SPSM band computed at 105 stations considered (dots). The colors of dots represent the RMS amplitude as specified in the color bar. The blue, green and red contour lines represent significant wave heights of 3, 4 and 5 m, respectively, while the red five-point star in (c) indicates the eye position of the sub-tropical system Helios obtained from satellite images.

30 Supplementary Figure 5: (a) Comparison between the SWH time series retrieved from
31 hindcast data (SWH-Hind; light-blue line) and from HF Radar data (SWH-HF; orange dashed
32 line). (b) Crossplot showing the agreement between SWH-Hind and SWH-HF data with a R<sup>2</sup>
33 of 0.849. For the HF Radar location see Figure 2c.

36 Supplementary Figure 6: Spatial distribution of  $R^2$  values during the entire period when we 37 obtained reliable locations. The red five-point star indicates the centroid position of all the grid 38 nodes whose  $R^2$  values do not differ by more than 1% from the maximum  $R^2$  value.

Supplementary Figure 7: Scatter plot showing the time series of the maximum R<sup>2</sup>, obtained
by the location analysis, and of the SWH-Hind, obtained by computing the median value of the
SWH data within the area in Figure 8d. The black dashed lines represent the time interval
when Helios reached its highest intensity while the red dashed line indicates the R<sup>2</sup> reliable
threshold.

46 Supplementary Figure 8: Hindcast maps showing the significant wave heights (in m) during
47 the entire period when we obtained reliable locations by the grid search method. The rose
48 diagram, located at the center of the Etna seismic permanent network (see Figure 2b), shows
49 the distribution of the back azimuth values computed by the f–k analysis for the PM frequency
50 band.

52 Supplementary Figure 9: Distribution of apparent velocity values computed by f-k analysis
53 for the PM frequency band. These values were calculated during the entire period when we
54 obtained reliable locations by the grid search method.

56 Supplementary figure 10: Hindcast maps showing the significant wave heights (in m) during 57 the entire period when we obtained reliable locations by the grid search method. The rose 58 diagram, located at the center of the Etna seismic permanent network (see Figure 2b), shows 59 the distribution of the back azimuth values computed by f–k analysis for the SM frequency 60 band.

62 Supplementary Figure 11: Distribution of apparent velocity values computed by f-k analysis
63 for the SM frequency band. These values were calculated during the entire period when we

obtained reliable locations by the grid search method.

**Supplementary table 1.** List of stations used for the spectral analysis and in the grid search

73 method and their features in terms of locations and sensor type.

N	Name	Longitude (degrees)	Latitude (degrees)	Altitude (m a.s.l.)	Sensor
1	EPLC	14.9857	37.7651	2917	Nanometrics Trillium 40S
2	ESVO	14.9469	37.7731	1691	Nanometrics Trillium 40S

3	ESPC	15.0274	37.6925	1610	Nanometrics Trillium 40S
4	ESLN	14.9744	37.6934	1735	Nanometrics Trillium 40S
5	EPIT	15.0567	37.8113	1586	Nanometrics Trillium 40S
6	EPDN	15.0168	37.7659	2823	Nanometrics Trillium 40S
7	EMPL	14.9703	37.6790	1438	Nanometrics Trillium 40S
8	EMFO	15.0902	37.7357	1163	Nanometrics Trillium 40S
9	ECZM	14.9041	37.7313	1346	Nanometrics Trillium 40S
10	ECPN	14.9865	37.7437	2996	Nanometrics Trillium 40S
11	ECNE	15.0018	37.7653	2901	Nanometrics Trillium 40S
12	ECBD	15.0865	37.7802	1419	Nanometrics Trillium 40S
13	EMNR	15.0260	37.8168	1797	Nanometrics Trillium 40S

14	EMSG	14.9495	37.8215	1435	Nanometrics Trillium 40S
15	EMFS	14.9979	37.7196	2507	Nanometrics Trillium 40S

**Supplementary table 2.** List of stations used in the array method and their features in terms

78 of locations and sensor type.
