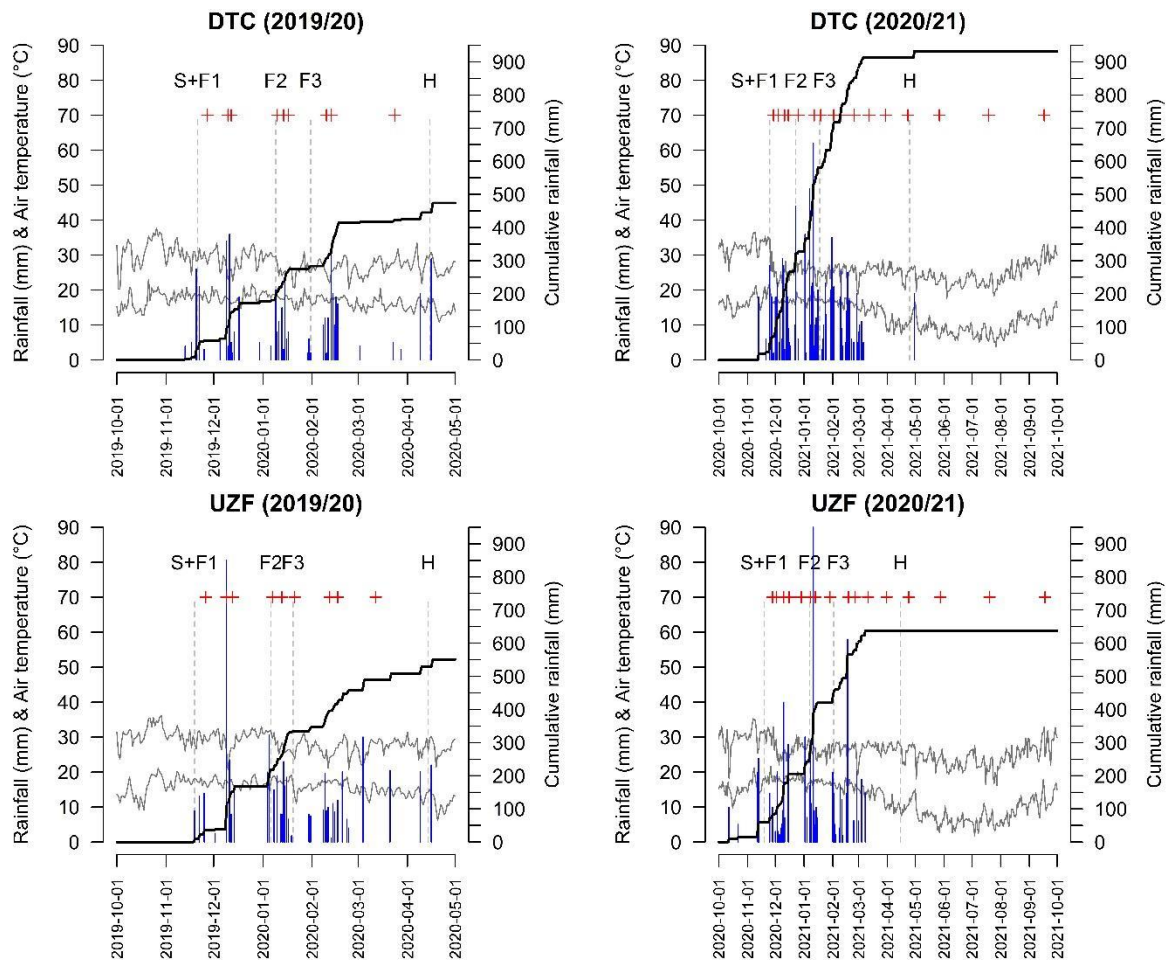

Figure S1. Daily and cumulative seasonal rainfall, maximum and minimum air temperature during the 2019/20 and 20/21 seasons at the Domboshava Training Centre (DTC) and University of Zimbabwe farm (UZF) experimental sites. S+F1: sowing + basal fertilizer application, F2: first nitrogen topdressing, F3: second nitrogen topdressing, H: maize harvesting. The red crosses indicate gas sampling dates. The upper and lower grey lines represent the maximum and minimum daily air temperature, respectively.

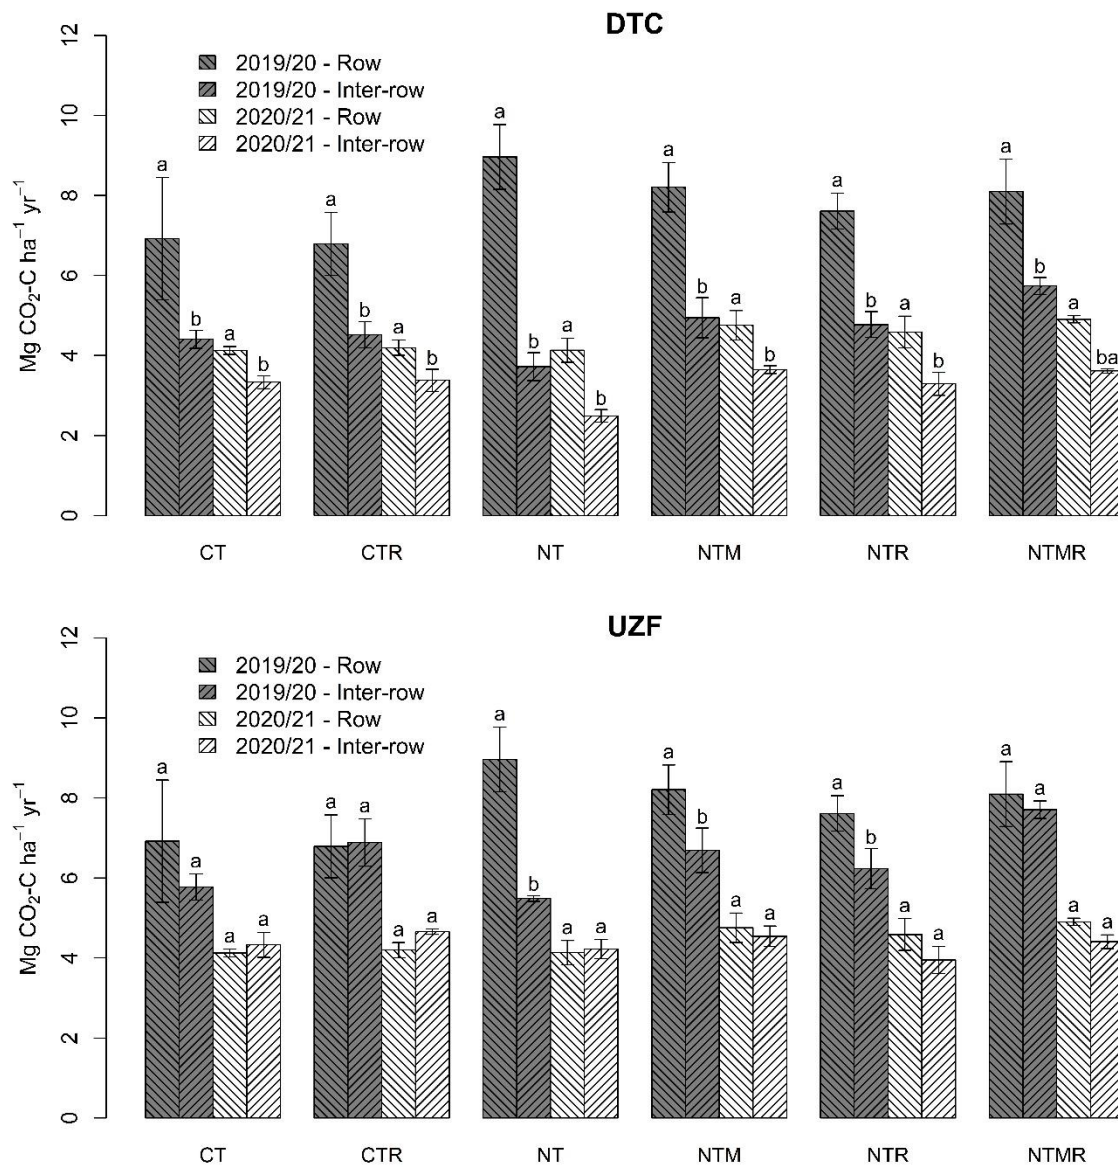

Figure S2. Row and inter-row cumulative CO₂-C emissions for the different treatments in the 2019/20 cropping season, the 2020/21 cropping season, and the whole year (2020/21) at Domboshava Training Centre (DTC) and University of Zimbabwe Farm (UZF). Bars represent standard errors (N = 4). CT: conventional tillage, CTR: conventional tillage with rotation, NT: no-tillage, NTM: no-tillage with mulch, NTR: no-tillage with rotation, NTMR: no-tillage with mulch and rotation.

Table S1: Subsoil bulk density (g cm^{-3}) from pits outside the experimental plots at Domboshava Training Centre (DTC) and the University of Zimbabwe (UZF). Associated errors are standard errors ($N = 4$).

Depth (cm)	Site	
	DTC	UZF
30-40	1.49 (± 0.01)	1.47 (± 0.01)
40-50	1.47 (± 0.01)	1.49 (± 0.00)
50-75	1.49 (± 0.01)	1.48 (± 0.01)
75-100	1.51 (± 0.01)	1.48 (± 0.01)

Table S3: SOC stocks per soil layer at the Domboshava Training Centre (DTC) and University of Zimbabwe Farm (UZF) after 8 years of different tillage, residue and crop management systems. Means in the same row followed by different superscript letters are significantly different and associated errors are standard errors (N = 4). CT: conventional tillage, CTR: conventional tillage with rotation, NT: no-tillage, NTM: no-tillage with mulch, NTR: no-tillage with rotation, NTMR: no-tillage with mulch and rotation.
