2 Table S1. List of sampling sites and periods in the field campaign of ATMSYC project.

1

3 Nos: Number of observations. For the sites, B representing the background, and U

4 representing the urban, Sites in the PRD belong to Urban.

Species	Species types in	Species included both in observation and	Remarks
groups	saprc07tic	simulation	
Alkanes	ALK1	ethane	kOH between 2 and 5 × 10^2 ppm ⁻¹ min ⁻¹
	ALK2	n-propane	kOH between 5×10^2 and 2.5×10^3 ppm ⁻¹ min ⁻¹
	ALK3	1-/i-butene, n-butane, isobutane, 2,2- dimethylbutane, 2.2.4-trimehylpentane	kOH between 2.5×10^3 and 5×10^3 ppm ⁻¹ min ⁻¹
	ALK4	i-pentane, n-pentane, 2-methylpentane, 3- methylpentane, cyclopentane, n-hexane, n-heptane, methylcyclopentane, 2,4- dimethylpentane, 2,3-dimethylpentane, 2,3,4-trimethylpentane, 2.3-dimethylbutane	kOH between 5×10^3 and 1×10^4 ppm ⁻¹ min ⁻¹
	ALK5	cyclohexane, methylcyclohexane, 2- methylhexane, 3-methylhexane, 2-methylheptane, 3-methylheptane, n-octane, n-nonane, n-decane	$kOH > 1 \times 10^4 \text{ ppm}^{-1} \text{ min}^{-1}$
Aromatics	ARO1	ethylbenzene, isopropylbenzene, n-	$kOH < 2 \times 10^4 \text{ ppm}^{-1} \text{ min}^{-1}$
	ARO2MN	1,2,3-trimethylbenzene, 1,3,5-trimetylbenzene, o-ethyltoluene, 3-ethyltoluene, 4-ethyltoluene, 1,2,4- trimethylbenzene (0.5)	$kOH > 2 \times 10^4 \text{ ppm}^{-1} \text{ min}^{-1}$, minus naphthalene
	TOLU	toluene	
	BENZ	benzene	
	XYL	o-xylene, m/p-xylene	
	B124	1,2,4-trimethylbenzene (0.5)	
Alkenes	OLE1	1-butene, 1-pentene, 3-methyl-1-butene, 4- methyl-1-pentene	$kOH < 7 \times 10^4 \text{ ppm}^{-1} \text{ min}^{-1}$, other than ethene
	OLE2	trans-2-butene, cis-2-butene, 2-methyl-1- butene, 2-methyl-2-butene, trans-2-pentene, cis-2-pentene, 2-methyl-1- pentene, cyclopentene, styrene	$kOH > 7 \times 10^4 \text{ ppm}^{-1} \text{ min}^{-1}$
	ISOP	isoprene	
	ETHE	ethylene	
	PRPE	propene	
	APIN	a-pinene	
	BDE13	1,3-butadiene	
Alkyne	ACYE	acetylene	
НСНО	НСНО	formaldehyde	

5 Table S2. The specific classification of VOCs in this study

6 kOH: The reaction rate constant between VOCs and Hydroxyl radical (OH).

7 Table S3. Model performance of MDA8 O₃ and NO₂ in the 28 sites from June 6th to August

8 24th, 2018

9 OBS: mean observation; PRE: mean prediction; NMB: normalized mean bias; NME:

10 normalized mean error; R: the correlation coefficient. The performance criteria for MDA8 O₃

11 were suggested by (Emery et al., 2017). The values that exceed the criteria were highlighted

12 in bold.

Table S9. Model performance of temperature (T2) and relative humidity (RH) in the 28 sites

from June 6th to August 24th, 2018

56 RMSE: root mean square error. The performance criteria for T2 were suggested by (Emery et

al., 2001). The values that exceed the criteria were highlighted in bold.

61 Table S10. Model performance of wind speed (WS) and wind direction (WD) in the 28 sites

62 from June 6th to August 24th, 2018

63 The performance criteria for WS and WD were suggested by (Emery et al., 2001). The values

64 that exceed the criteria were highlighted in bold.

67 the study period. For each site, on the left are prediction values with blue edge, and on the

right are observation values with red edge (a) Alkanes, (b) Alkenes, (c) Aromatics.

Figure S2. Observed and predicted values of different VOCs species groups by regional

72

73 74 Figure S3. Ratio (pre/obs) of O_3 , NO_2 and different VOCs species at (a) urban sites (18 sites)

⁷⁵ and (b) backgound sites (10 sites).

Figure S4. The difference between the predicted concentration of seven new cases and base case, and the impact on O₃ concentration from June 6th to August 24th in 2018. Concentration of NO₂ is shown in case_NO_x.

81

Figure S5. Relative Incremental Reactivity (RIR) of 6 VOCs at 28 sites during the study

83 period. Each dot represents the RIR of the specific VOCs corresponding to the case at that

site.
