

Multi-fold increase in rainforests tipping risk beyond 1.5-2°C warming

Response to Editor

Thanks for your revision. Line 278-279 can be more informative, e.g., To classify savannas under future climate conditions, we assume that the vegetation type is in equilibrium with the climate (see Appendix A3 for detailed steps).

Response: We appreciate the editor's feedback, and have now added the following sentence:

“To classify savanna under future climate conditions, we assume the ecosystem is in equilibrium with the projected climate (see detailed steps in Appendix A3).” [Pg 8, Ln 255-256]
