## Supporting materials

**Table S1.** Villacher Alpe seasonal statistics over the period 1973-2002 and Weißseespitze statistics over the entire record. Results are obtained with statistics over the delta-18O values corrected for altitude (-0.09 ‰/100 m). SPR = AMJ; SUM = JAS; AUT = OND; WIN = JFM.

Villacher Alpe (seasonal statistics 1973-2002)			
SPR mean	SUM mean	AUT mean	WIN mean
-11.25	-9.56	-14.05	-14.61
SPR min	SUM min	AUT min	WIN min
-12.73	-10.77	-15.26	-15.04
SPR max	SUM max	AUT max	WIN max
-10.27	-8.40	-11.95	-14.22

Weißseespitze (statistics over the entire record)			
mean d18O	Std dev	min	max
-13.98	1.71	-15.69	-12.28

**Figure S1.** Spearman correlation matrix for major ions within the WSS ice core.

**Figure S2.** Cations/anions ratio along the WSS core depth, positively accounting for cations within 5 % of the balance.

**Figure S3.** WSS ice core sample from bag 18. LA-ICP-MS image shows Na, Mg, Al in red, green and blue colorscale, respectively for an area of 3 x 4 mm.
