

**Table S1. Site ID, name, location (latitude and longitude), elevation (m), distance from Oshawa (m), distance from shore (m) for the 37 locations selected for ozone sampling in Oshawa and Toronto, Ontario. Distance from Oshawa is measured from ID 19. Sites measured in each season are marked with a Yes/No if they were sampled.**

Site ID	Name	Summer	Winter	Distance from Shore (m)	Distance from Oshawa (km)	Latitude (decimal degrees)	Longitude (decimal degrees)
1	Conlin Rd.	Yes	No	11000	-	43.56886	-78.53789

35 **Figure S1. Ozone concentrations against distance from Oshawa GO station (ID 19) in summer 2022.**

**Figure S2. Ozone concentration in parallel to shore transect against distance from shore in summer 2022.**

Figure S1 shows a slight increase in ozone regionally starting from Oshawa (ID 19) and moving west towards Scarborough on all days except August 1<sup>st</sup>, 2022. Oshawa typically had the lowest ozone concentration, peaking at Pickering (ID 22) and Rouge Hill (ID 23), followed up a slight decrease at the University of Toronto Scarborough (ID 24). This was likely the influence of greater pollution emissions further west towards the Greater Toronto Area and major urban centres. The mean increase is  $0.26 \pm 0.28$  ppb/km (1 standard deviation) and a low linear regression  $R^2$  below 0.5 on all days except July 1<sup>st</sup>, 2022. Historical data from Ontario air quality monitoring stations in Toronto and Oshawa in summer also shows that ozone concentrations did not vary considerably between the cities (see Table S4).

Figure S2 shows that the ozone gradients can not be observed when not measured at perpendicular transects to the lakeshore. There is slight negative trend for ozone versus distance to shore observed on all days except July 9<sup>th</sup>, 2022, and mean slope of  $-0.91 \pm 0.0007$  ppb/km (1 standard deviation), which is not comparable to those observed nearshore. Linear regression  $R^2$  was also poor.

50 **Table S4. Mean and variance of average daily O<sub>3</sub> mixing ratios (ppb) from Ontario air quality monitoring stations Oshawa (station ID 45027) and Toronto Downtown (station ID 31129) in January and July 2021. Average daily values calculated from 01:00 to 24:00 EDT of a single day. P-values determined from two-sample t-test assuming unequal variance, alpha = 0.05.**

	Average Daily Ozone July 2021		Average Daily Ozone January 2021	
	Oshawa	Toronto Downtown	Oshawa	Toronto Downtown
Mean (ppb)	23.5	26.6	26.3	20.1
Variance (ppb)	44.6	48.0	48.0	28.5
p-value	0.08		0.0002	

55 **Table S5. Mean and variance of average daily NO<sub>2</sub> mixing ratios (ppb) from Ontario air quality monitoring stations in Oshawa (station ID 45027) and Toronto Downtown (station ID 31129) in January and July 2021. Average daily values calculated from 01:00 to 24:00 EDT of a single day. P-values determined from two-sample t-test assuming unequal variance, alpha = 0.05.**

	Average Daily NO <sub>2</sub> July 2021		Average Daily NO <sub>2</sub> January 2021	
	Oshawa	Toronto Downtown	Oshawa	Toronto Downtown
Mean (ppb)	2.1	9.6	4.3	12.6
Variance (ppb)	0.5	7.5	13.6	9.3
p-value	2E-16		8E-14
