Contents
Figure S1. Daily averaged concentration of PM$_{2.5}$ on 12 December in China
Figure S2. Sea level pressure field on 12, 13 December in Changzhou
Figure S3. Daily averaged concentration of PM$_{2.5}$ on 18 December in China
Figure S4. Sea level pressure field on 18, 19 December in Wangdu
Figure S5. Daily averaged concentration of PM$_{2.5}$ on 20 December in China
Figure S6. Sea level pressure field on 20, 21 December in Wangdu
Figure S7. The average sea level pressure field of all T-NPES events in Changzhou
Figure S8. The average sea level pressure field of all T-NPES events in Wangdu
Figure S9. A typical T-NPES event of Type 1
Figure S10. A typical T-NPES event of Type 2
Figure S11. A typical T-NPES event of Type 3
Figure S12. A typical T-NPES event of Type 4
Figure S13. Backward trajectories of Chengdu, ending at 0:00 on 7, 8 January
Figure S1. Daily averaged concentration of PM$_{2.5}$ (shaded, unit: $\mu$g/m$^3$) on 12 December in China. The dark dot represents the observation site in Changzhou.
Figure S2. Sea level pressure (shaded, unit: hPa) field on (a) 20:00, 12 December and (b) 8:00, 13 December. The blue dot represents the observation site in Changzhou.

Figure S3. Daily averaged concentration of PM$_{2.5}$ (shaded, unit: μg/m$^3$) on 18 December in China. The dark dot represents the observation site in Wangdu.
Figure S4. Sea level pressure (shaded, unit: hPa) field on (a) 20:00, 18 December and (b) 8:00, 19 December. The blue dot represents the observation site in Wangdu.

Figure S5. Daily averaged concentration of PM$_{2.5}$ (shaded, unit: μg/m$^3$) on 20 December in China. The dark dot represents the observation site in Wangdu.
Figure S6. Sea level pressure (shaded, unit: hPa) field on (a) 20:00, 20 December and (b) 8:00, 21 December. The blue dot represents the observation site in Wangdu.
Figure S7. The average sea level pressure (shaded, unit: hPa) field on (a) 20:00 and (b) 8:00 in next day of all T-NPES events in Changzhou. The blue dot represents the observation site in Changzhou.
Figure S8. The average sea level pressure (shaded, unit: hPa) field on (a) 20:00 and (b) 8:00 in next day of all T-NPES events in Wangdu. The blue dot represents the observation site in Wangdu.
Figure S9. A typical T-NPES event of Type 1. The black box indicated the T-NPES event.

Figure S10. A typical T-NPES event of Type 2. The black box indicated the T-NPES event.
Figure S11. A typical T-NPES event of Type 3. The black box indicated the T-NPES event.

Figure S12. A typical T-NPES event of Type 4. The black box indicated the T-NPES event.
Figure S13. Backward trajectories of Chengdu at 100, 500, and 1000 m, ending at 0:00 on 7 and 8 January, determined by the HYSPLIT model.
