Explanation for the typesetter remarks TS1-TS7

The mean value of $\mathbf{Y} \in \mathbb{R}^{W \mathrm{x} H}$ is $\bar{Y} = \frac{1}{WH} \sum_{w=1}^{W} \sum_{h=1}^{H} \mathbf{Y}_{(w,h)} \in \mathbb{R}^{1 \mathrm{x} 1}$.

Using a subscript (w, h) for $\bar{Y}$ is redundant as the mean value is the same for all values in $\mathbf{Y}$.

Thus, $\bar{Y}_{(w,h)}$ should be written as $\bar{Y}$. The same applies for $\hat{\bar{Y}}$.
