

Precipitation extremes in Ukraine from 1979 to 2019: Climatology, large-scale flow conditions, and moisture sources

by Ellina Agayar, Franziska Aemisegger, Moshe Armon, Alexander Scherrmann, and Heini Wernli

Comment from Reviewer and Editor

"In my previous review, I have made suggestions to revise and improve the presentation of the material in the paper. The authors chose to address these points in a minimal way, for example by adding writing rather than changing Fig. 1. That will probably work, but I feel my comments have not really been taken up in a positive spirit by the authors, and just been dealt with in a minimal way. Same regarding my comments on Table 1. To save also my time, I will therefore not provide further helpful input on this manuscript.

My comments have been addressed, but in a somewhat minimalistic way. For example, Fig. 1 is still not very informative and low quality, and Table 1 still is cluttered and provides too much information that is not well organised. Nonetheless, the paper will probably work that way, even though the presentation quality is not optimal."

We are grateful to the Reviewer for their valuable input on this manuscript and sincerely appreciate reviewer's time and comments. Therefore, we added maps of the seasonal precipitation (to Fig.1 L.173-178), and shifted Table 1 to the Supplementary Material (Table S3).

We hope that the Editor is fine with these changes.
