

Main supplementary figures and tables

This document contains 1 figure and 6 tables submitted as supplementary to the manuscript titled *Direct foliar phosphorus uptake from wildfire ash*, by Lokshin et al.

Contents

Figure S1 - fractionation of fire ash as it was done using a sequential extraction procedure following a modified Hedley scheme.....	2
Table S1 – XRD and XRF data of the fire ash particles.....	3
Table S2 – ICP-MS data of the control plants, fertilizers and fire ash particles	4
Table S3 – ICP-MS data of the foliar treated plants	5
Table S4 – ICP-MS data of the root treated plants	6
Table S5 – Leaf pH	7
Table S6 – Plant’s holding capacity of fire ash particles.....	8

Figure S1 - fractionation of fire ash as it was done using a sequential extraction procedure following a modified Hedley scheme

The dissolution of fire ash particles by HCl (red), H₂NaCO₃ (orange) and NaOH (green) acids. According to these results, most of the P inside a fire ash is found in a Ca-P complexes. A significant portion (21%) is classified as labile P which readily dissolves when exposed to a weak base.

Table S1 – XRD and XRF data of the fire ash particles

XRD - fire ash sample	%
Calcite (CaCO_3)	80
Hibschite ($(\text{Ca,Fe})_3(\text{Al,Fe})_2\text{SiO}_4(\text{OH})$)	1.4
Larnite/orthosilicate ($\text{Ca}_2(\text{SiO}_4)$)	17.4
Analcime ($\text{K}_8\text{Al}_8\text{Si}_{16}\text{O}_{48}$)	1.2
Possible trace sulfates and/or phosphates	<0.5%

XRF - fire ash sample

Element	Conc. (%)
O	31.8
Na	0.1
Mg	0.7
Al	1.3
Si	4.4
