**Table S1. Strength scaling factors for four distinct rheological models.** CB-I and CB-II, Crème brûlée model with a strong and weak lower crust, respectively; JS-I and JS-II, Jelly sandwich model with a strong and weak lower crust, respectively.  $S_{UC}$ ,  $S_{LC}$ , and  $S_{LM}$  are strength scaling factors for the upper and lower crust and lithospheric mantle, respectively.

Rheological model	$S_{UC}$	$S_{LC}$	$S_{LM}$
CB-I	1	10	0.1
CB-II	1	0.1	0.1
JS-I	1	10	1
JS-II	1	0.1	1

**Figure S1. Simulation results display four styles of lithosphere deformation patterns. (a) – (d)** Simulation results of models in which lithospheric rheology for the Mid-terrane is CB-I, CB-II, JS-I and JS-II, respectively. Different symbols indicate distinct deformation styles, including lithosphere collision, subduction, thickening and delamination, and replacement.
