## 17 **Abstract.**

18 The past decade has seen a global transformation in how we communicate and connect with one another, making it easier to  
19 network and collaborate with colleagues worldwide. The COVID-19 pandemic led to a rapid and unplanned shift toward virtual  
20 platforms, resulting in several accessibility challenges that have excluded many people during virtual events. Virtual and hybrid  
21 conferences have the potential to present opportunities and collaborations to groups previously excluded from purely in-person  
22 conference formats. This can only be achieved through thoughtful and careful planning with inclusion and accessibility in  
23 mind, learning lessons from previous events' successes and failures. Without effective planning, virtual and hybrid events will  
24 replicate many biases and exclusions inherent to in-person events. This article provides guidance on best practices for making  
25 online/virtual and hybrid events more accessible based on the combined experiences of diverse groups and individuals who  
26 have planned and run such events.

27 Our suggestions focus on the accessibility considerations of three event planning stages: 1) pre-event planning, 2) on the  
28 day/during the event, and 3) after the event. Ensuring accessibility and inclusivity in designing and running virtual events can  
29 help everyone engage more meaningfully, resulting in more impactful discussions that will more fully include contributions  
30 from the many groups with limited access to in-person events. However, while this article is intended to act as a starting place  
31 for inclusion and accessibility in online and hybrid event planning, it is not a fully comprehensive guide. As more events are  
32 run, it is expected that new insights and experiences will be gained, helping to continually update standards.

## 33 **1 Introduction**

34 Diversity leads to better research and work outputs, helping to generate novel findings and perspectives (e.g., Beilock,  
35 2019; Gomez and Bernet, 2019; Swartz et al., 2019; Hundschell et al., 2021). While diversity movements have historically  
36 focused on gender (typically binary) and ethnic background (see Golden, 2024), the more recent move to virtual platforms in  
37 2020, have facilitated people connecting in a way never possible before. This also led to discussions on barriers to inclusion  
38 within geoscience, including consideration of fieldwork accessibility (Giles et al., 2020; Stokes et al., 2019; Greene et al.,  
39 2021; Pickering and Khosa, 2023), financial barriers (Abeyta et al., 2021), and parachute science, where international scientists  
40 conduct research without meaningfully engaging local communities and researchers (Ekandjo and Belgrano, 2022; Stefanoudis  
41 et al., 2021). These discussions have helped create new ideas and actions to overcome geosciences' historical lack of diversity  
42 (Dowey et al., 2021; Huntoon et al., 2015; Marin-Spiotta et al., 2020), creating a more inclusive and equitable field. However,  
43 one persistent challenge, impacting many people from different countries and backgrounds, has been accessing and attending  
44 international in-person conferences, which are fundamental opportunities to network and connect with other researchers from  
45 beyond typical geographic and disciplinary boundaries (Fleming, 2020). The dominance of purely in-person events has often  
46 resulted in the exclusion of historically marginalized groups from these spaces. As such, the recent evolution in virtual, online,  
47 and hybrid (events with both in-person and online elements) conferencing, and its impact upon accessibility and inclusivity in  
48 geoscience, merits renewed discussion.

49 While traditional in-person conferences offer many opportunities, they often present physical and mental challenges  
50 to participation for a wide range of people, including, but not limited to, those who are neurodivergent, have disabilities or  
51 chronic conditions, caring responsibilities or family commitments (Chautard, 2019). For many researchers, events are too  
52 expensive to attend in-person when registration fees, accommodation, transport and other costs are taken into consideration  
53 (Sang, 2017; Vasquez, 2021; Wu et al., 2022; Amarante and Haag, 2024). The predominance of in-person events held in the  
54 Global North also increases the costs for many from the Global South, and reduces opportunities and career progression options  
55 for many marginalized groups (Talavera-Soza, 2023). Researchers from the Global South often require visas to attend in-  
56 person conferences, which are often difficult and costly to obtain and require significant time in advance to arrange. Indeed,  
57 there have been numerous reported cases of researchers who were unable to attend in-person conferences to present their work  
58 simply because a request for a visa was either rejected or ignored completely (Chatterjee, 2022). Furthermore, cultural and  
59 political factors can also act to make in-person conferences inaccessible for minoritized researchers. Transgender and gender  
60 non-binary researchers may have problems traveling with a passport that does not align with their gender-expression (Savage  
61 and Banerji, 2022). Additionally, using a passport with a neutral gender-marker (e.g., 'X' on U.S. passports) may cause issues  
62 if they are not accepted in the conference host country (Quinan, 2022). The political and cultural climate of many countries is  
63 not one of inclusion for LGBTQIA+ people, with lack of legal support creating unsafe environments for the community  
64 (Gibson, 2021; Olcott and Downen, 2020). In-person events may also lead to experiences of isolation, discrimination, and  
65 sexual harassment (EDIG, 2020). Alcohol-focused social events may further exclude people from full participation and cause

66 increased occurrences of sexual harassment and other inappropriate behaviours in professional settings (GRL, 2020).  
67 Consequently, virtual and hybrid events can provide advantages to foster more inclusive and accessible environments,  
68 encouraging participation from more diverse audiences and promoting a greater sense of belonging for all (Foramitti, 2021;  
69 Wu et al., 2022). Further, as many geoscientists are striving to travel less for environmental reasons, virtual options offer a  
70 potential alternative to reduce high carbon footprints associated with in-person attendance (Allen, 1996; Tao et al., 2021;  
71 Periyasamy et al., 2022).

72 In the last 10 years or so, but especially since the forced virtualisation of many research activities during the COVID-  
73 19 pandemic, the number of virtual academic events has increased very rapidly (Graham, 2023), yet equity, diversity,  
74 inclusivity and accessibility have to a large extent not featured in discussions around this virtualisation. Indeed, many events  
75 previously hosted online (as a result of the pandemic) are now returning to fully in-person, often resulting in the exclusion of  
76 historically marginalized groups and many others who benefited from the previous change (Fraser, 2017; Niner, 2021). It is  
77 our view that for global, interconnected networks to continue to grow, and to provide a more inclusive and accessible  
78 experience for a wider audience, virtual or hybrid events must continue to play a role in geoscience. Including virtual access  
79 to events makes them more inclusive and accessible, helping to share the content with more people, including those who are  
80 unable or unwilling to travel or are otherwise unavailable to attend physically. However, while virtual alternatives can be very  
81 positive, several challenges remain, including technological fatigue (Wiederhold, 2020; Gain, 2024), a lack of networking  
82 opportunities (King and Kovács, 2021), poor inclusion of the online audience in hybrid events (Eventforce, 2024), or a lack of  
83 access to a reliable internet connection (due to remote locations, poor infrastructure or a lack of finances to purchase internet  
84 services; Signé, 2023). To counter these challenges, advanced discussion and consideration of accessibility during the pre-  
85 event, event, and post-event planning stages is crucial to avoid the inadvertent exclusion of people. It is not sufficient to simply  
86 include a virtual component as an add-on at the end. If we wish to make sure that online and hybrid events are truly inclusive  
87 and accessible, structures should be put in place early to ensure equitable experiences between virtual and in-person  
88 participants.

89 Here, we outline suggestions to help make online and hybrid events more accessible to a wider audience, based on  
90 the experiences of several groups and people involved with event planning for the virtual landscape, as well as from a wider  
91 search of the literature surrounding virtual events. This article is structured as follows: we first provide a summary of the  
92 existing literature surrounding accessibility, inclusion and online or hybrid conferences, and then provide some guidance for  
93 each stage of running an accessible and equitable event including Stage 1 (pre-event), Stage 2 (during the event) and Stage 3  
94 (after the event). Some of these suggestions will depend on the size and type of event being organised, but they have been  
95 merged here to ensure that all elements are considered. While this article focuses on virtual and hybrid conferences specifically,  
96 our suggestions may be applicable to other events like seminars, workshops and panel discussions. Many of us will be involved  
97 in organising a virtual or hybrid event at some point in our careers, and ensuring it is accessible and inclusive for all requires  
98 some thought and planning. We acknowledge that this paper cannot give a full and finite description of making online and

99 hybrid events more accessible and inclusive, as new techniques and strategies will evolve. As such, this article is only intended  
100 to act as a starting place, and does not represent an ultimate guide to the accessibility needs of an event.

## 101 **2 Review of previous literature**

102 *When did the shift to virtual events begin, and how has this change manifested over time?*

103 To quantitatively demonstrate changing interest in virtual conferences prior to, and following, 2020, we analysed records of  
104 literature indexed by Web of Science (<https://www.webofscience.com/wos/>). We chose to limit our search to articles with the  
105 words ‘virtual’, ‘online’ and ‘conference’ specifically in the title rather than in the abstract text, as these articles are more likely  
106 to deal with the specifics of virtual conferencing. We constructed searches by using the ‘NEAR’ query term to eliminate  
107 articles which do not directly relate to virtual conferences (see Supplement Table 1). This strategy was not entirely successful:  
108 for example, several papers were found concerning a ‘virtual geoscience conference’ which was an in-person event whose  
109 subject matter was photogrammetry and other virtual techniques for collecting and presenting geoscience data (Chandler,  
110 2016); these data were removed manually from the analysis. Nevertheless, the search yielded a total of 452 unique publications,  
111 which when plotted by year (Fig. 1) show an increase in publications as of March 2020: a total of 312 articles within the search  
112 were published in 2020 - 2023, almost 70% of the total dataset. We additionally performed searches of the Directory of Open  
113 Access Journals (<https://doaj.org/>), which allows less detailed search queries to be constructed and does not allow article  
114 metadata to be easily downloaded. A search for the words ‘virtual’ and ‘conference’ in the title of articles produced 71 results,  
115 of which 63 (89%) were published since March 2020, while a search for ‘online conference’ yielded 56 results, of which 46  
116 (82%) were published since March 2020. Many articles published from 2020 onwards explicitly state that their rationale for  
117 considering virtual event organisation was driven by the pandemic (e.g., Busse, 2020; Fulcher, 2020; Gottlieb, 2020; Jain,  
118 2022). In line with this change in interest, there has also been a shift in the type of literature published, with grey literature  
119 (blogs, social media, websites, etc) becoming an important body of work for several academic fields during the pandemic  
120 (Kousha et al., 2022).

121

122

123

124

125

**Figure 1:** Plot of Web of Science search results for articles with the words ‘virtual’ or ‘online’ and ‘conference’ in their title, within two words of each other (total dataset = 452). An uptick in publications is visible from 2020 (312 were published from 2020 onwards), coincident with the onset of the COVID-19 pandemic which precipitated a necessary rise in virtual conferencing.

126

127

128

129

130

To assess the interest in virtual conferencing outside of an academic sphere, we analysed search data from Google Trends (<https://trends.google.com/>), aggregating hits for searches for six terms related to virtual conferencing from the last five years (**Fig. 2;** see Supplement Table 2 for a list of all aggregated search terms). These data demonstrate an increase during the first wave of the COVID-19 pandemic, with interest tailing off from the summer of 2020 to the present, albeit the interest remains higher than before the start of the pandemic

131

132

133

134

135

136

**Figure 2:** Plot of Google Trends data, across all search categories over the 5-year period 02/09/2018-29/08/2023, for search terms related to (a) virtual academic conferences and (b) related to equity, diversity, and inclusion (EDI). Co-located troughs in both search categories can be seen each December which correspond to winter breaks, with other dips aligning with holiday terms in many countries. Generally, interest in EDI gently increased with time, whereas that in virtual conferencing spiked during the COVID-19 pandemic but declined shortly after.

137

*What motivations were given for increased ‘virtualisation’ of conferences at the time?*

138

139

140

141

142

143

144

Conferences are efficient tools for facilitating academic discussion, career development, networking, and collaboration, but present several inherent inaccessibility and inequality challenges. While traditional conferences have typically been held in-person, the existence of virtual alternatives have long been recognised: the concept of virtual conferences and the use of virtual spaces to network has been discussed in the literature as early as 1986 (Heim, 1986). Much of the earlier literature is primarily concerned with addressing technological developments in virtual conferencing, which facilitate increased opportunities for networking and professional development if an appropriate physical meeting is not feasible (e.g., Anderson, 1996; Blow, 2011; Thatcher, 2006).

145

146

147

148

149

150

151

152

153

154

155

As the virtual conference management and participation landscape developed further, articles began to identify communities for whom traditional, in-person conferences fail to cater, and to suggest innovative virtual solutions to these specific hurdles. For example, Gichora (2010) described a series of conferences run virtually via regional hubs across Africa, facilitating access to a conference without the need for the time and money required for travel. Black et al. (2020) outlined the benefits of virtual interactions over in-person conferences from a feminist perspective, drawing on the experiences of organising a fully virtual, interdisciplinary conference (Lewis et al., 2019). Although the urgency of the COVID-19 pandemic led to comparatively little questioning of the status quo, pre-pandemic literature identified numerous ethical and EDI issues with in-person conferences (Spinellis and Louridas, 2013; Fraser, 2017), and reported results and surveys of virtual conference participation (Gunawardena et al., 2001; Gichora, 2010; Erickson, 2011). It should further be noted that many smaller-scale conferences and seminars have been run virtually in previous decades without a published record of having occurred and would therefore have been missed here.

156 *What challenges are associated with virtual conferences and how have these been addressed?*

157 The appropriate use of time zones is a common issue faced by virtual meetings, with significant planning required to ensure  
158 time zones are accessible to as many people as possible. Clear communication (e.g., time zone specific programs) is vital to  
159 ensure full inclusion (Gichora, 2010; Niner, 2020; Gibson, 2021). Virtual events often use a range of technologies, with many  
160 of these rapidly changing or being replaced. Consequently, it is vital to provide extra time in the schedule to account for  
161 technical glitches and to give presenters time to practice, and if choosing to facilitate live presentations, encourage pre-  
162 recordings as a backup in case of technical issues on the day (Gichora, 2010; Raby and Madden, 2021). Communication  
163 through other platforms (such as running social media campaigns or the use of mailing lists) prior to and during the event will  
164 also help ensure the smooth running of a meeting, as will having clear information on an online form such as a website  
165 (Gottlieb, 2020; Raby and Madden, 2021). The use of conference apps as the main communication platform may not be fully  
166 accessible as they may not be compatible with all phones, tablets or other devices and this assumes all participants have access  
167 to a device which can host apps (Niner, 2021). The use of apps may also present problems for digital accessibility needs (colour  
168 palettes, font, ease of reading, screen readers etc.) which may not be considered in the design of such platforms (e.g., Kohler,  
169 2023). Providing clear instructions on how to submit questions or how to attend any virtual activities or networking  
170 opportunities, with detailed explanations or access to help pages for any new technologies being implemented is crucial to  
171 avoid inadvertent exclusion (Raby and Madden, 2021).

172 Many event reviews discuss the challenges in creating effective networking environments and fostering participant  
173 engagement during online meetings (e.g., Fulcher, 2020; Correia, 2021; Gibson, 2021; Raby and Madden, 2021). In particular,  
174 virtual poster sessions have often been difficult to design with limited success in promoting engaging networking. While there  
175 have been virtual poster sessions prior to COVID (e.g., the AGU Virtual Poster Showcase), feedback on the success of these  
176 events is limited, but introducing the inclusion of other media (e.g., videos, QR codes) could enhance engagement (Raby and  
177 Madden, 2021). There may be multiple reasons why online engagement is hindered, with some people finding it more difficult  
178 to interpret social cues in virtual spaces making communication more challenging, or with people experiencing or expecting  
179 to experience more hostile interactions online than in person (Niner, 2021). While more structured virtual activities have been  
180 used to make online networking more successful (Fulcher, 2020), other reports suggest using alternative ways to engage that  
181 allow flexibility (Raby and Madden, 2021). The use of engagement platforms will depend on the scale of the event, with break-  
182 out rooms often working well in small meetings to promote participant engagement (Gottlieb, 2020), but including features  
183 such as networking pages could help participants engage more easily (Raby and Madden, 2021). Experimenting with different  
184 types of platforms and engagement methods will help in future event planning for specific events (Niner, 2020).

185 The financial barriers that in-person events may create for people, often enhanced by geography, is commonly  
186 discussed (e.g., Sarabipour, 2020; Raby and Madden, 2021; Rowe, 2019). Many international conferences are hosted in the  
187 Global North, creating additional barriers to participation such as difficulty obtaining visas, leading to biased demographics of

188 attendees (Waruru, 2018). While there are still several challenges to overcome for virtual events (as discussed herein), fully  
189 online conferences often reduce financial and geographical barriers to attendance (Wu et al., 2022). Hybrid events may have  
190 additional costs for arranging a virtual component as opposed to hosting the same event exclusively in person, depending on  
191 the type of event planned. However, including a virtual element to an event can lead to an increase in representation from  
192 traditionally underrepresented groups and foster new innovation and networking opportunities between new groups  
193 (Sarabipour, 2020). The potential accessibility of virtual events for low-income attendees is hindered if the conference fees are  
194 high, and adds another barrier to inclusion (Niner, 2020; Raby and Madden, 2021).

195 *Is EDI a focus of virtual conference design?*

196 Our literature review shows that the shift to virtual events was not specifically motivated by EDI issues, and that to better cater  
197 to these issues we should frame an appraisal of virtual conferences by their potential EDI benefits. This is borne out in the data  
198 analysed in Fig. 1. Of the 452 articles in the dataset, only three titles (<1 %) contained the strings ‘inclusiv’ (contained in  
199 ‘inclusive’ and ‘inclusivity’) or ‘accessib’ (contained in ‘accessible’ and ‘accessibility’). This quantitatively demonstrates that  
200 inclusivity and accessibility are not at the forefront of discussions around virtual conferencing, despite the increasing public  
201 interest in EDI issues, shown in Fig. 2. Several recent studies have highlighted the benefits to online conferences when EDI  
202 considerations are incorporated into conference design, including how virtual components can be used to create space and  
203 opportunities for minoritized groups by looking at audience engagement from a gendered point of view (Zhang et al., 2023).  
204 They demonstrated that, even though women composed an equal number of participants to men, they asked half as many  
205 questions as their male colleagues. A study of a different virtual conference from 2021 (de las Heras et al., 2023) provided an  
206 example of what can be achieved when the needs of minoritised groups, in this case women and early-career researchers, are  
207 kept in mind during the planning stages of a conference. By curating an event which centred the inclusion of these groups in  
208 the design of the conference (such as round-table events with quotas for the participation of these groups), the organisers  
209 received very positive feedback from the researchers involved.

210 Many people prefer in-person events for a variety of reasons including technology fatigue during online events and  
211 better social cues when meeting in person. Thus, hybrid events seem to be a good way to incorporate the needs of a broad  
212 spectrum of people. However, the organisation of hybrid events needs to carefully consider the needs of both in-person and  
213 virtual attendees in order to be inclusive.

214 Historically, EDI initiatives have not been the central theme of the published virtual conference literature, meaning  
215 that the implications of these types of events for EDI have often been overlooked. Many of these publications are reports of  
216 an individual virtual conference or series of conferences, written by the organisers of said conference, and therefore are not  
217 framed by an EDI agenda despite indirectly addressing many issues related to EDI (e.g., cost of travel, adhering to social  
218 distancing regulations). Reviews of virtual conferences are often but not always evaluated using feedback from participants,  
219 usually in the form of a post-event survey (e.g., Fulcher, 2020; Erickson, 2011; Busse, 2020; Moreira et al., 2022), and often

220 but not always give practical advice for the future running of online conferences (e.g., Achalkulvisut, 2021; Reshef, 2020;  
221 Gottlieb, 2020; Harabor and Vallati, 2020; Li et al., 2021; Fu and Mahony, 2023; Margetis et al., 2007). Specific advice given  
222 can apply both to running an online conference smoothly, without specific consideration of EDI (e.g., Pedaste and Kasemats,  
223 2021; Seery and Flaharty, 2020; Reshef, 2020) and give advice specifically tailored toward increasing EDI (e.g., Fraser, 2017;  
224 Gichora, 2010). While review articles cover a wide range of topics (such as survey feedback, online engagement,  
225 communication), it is important to note that these reviews are not fully representative of everyone and may not capture all  
226 perspectives, especially if someone is not able to attend in the first place due to lack of accessibility. Similarly, having a virtual  
227 component does not automatically result in equitable inclusion (Niner, 2020). Virtual events may still present barriers to  
228 inclusion. These include socio-economic challenges, with the cost of internet access varying widely across countries (Raby  
229 and Madden, 2021). Additionally, not all people can engage with virtual events in the same way, with some attendees including  
230 many neurodivergent or disabled participants often facing additional focus and fatigue challenges (e.g., Nahass, 2022; Kukoyi,  
231 2023), resulting in lower engagement and their inadvertent exclusion. As accessibility is not frequently a consideration in  
232 review articles of virtual events, there are several elements missing from the current literature. For example, live closed  
233 captions or subtitles for virtual and in-person events are rarely mentioned, as these may not have been considered far enough  
234 in advance for effective implementation (Gibson et al., 2021). But, these are crucial for the inclusion of those with certain  
235 disabilities and participants with different first languages to the conference (Seery and Flaharty, 2020; Wu et al., 2022). The  
236 benefits of effective subtitles and transcriptions in online environments are clear, with higher engagement from people with  
237 hearing and motion impairments in online lessons (Federico and Furini, 2012). In order to produce effective subtitles or closed  
238 captions, a clear audio connection is required, which may be restricted by poor microphones or acoustic environments, which  
239 may generate additional costs that should be considered early (Federico and Furini, 2012).

240 In-person academic conferences have existed since at least the eighteenth century (Bigg et al., 2023) but have often  
241 lacked meaningful consideration of EDI in their planning. In recent years, virtual conferences have increased in popularity,  
242 with the COVID-19 pandemic showing that increased use of virtual and online platforms leads to a huge increase in collective  
243 experiences, regardless of the limited experience of hosting virtual events many people had prior to the pandemic (Eventcube,  
244 2023). As virtual and hybrid conferences continue to be utilized, it is vital that the academic community incorporates  
245 accessibility and inclusion into their planning. With this in mind, in the section below we collate and combine  
246 recommendations from across both the literature and the authors' experiences running and participating in virtual/hybrid  
247 conferences and give concrete advice in the running of future events. As the breadth of the literature shows, each online  
248 conference will have different audiences, goals, and ways of planning (e.g., Gichora, 2010; Niner, 2020; Gibson, 2021; Raby  
249 and Madden, 2021). However, by utilizing diverse mechanisms for running conferences, novel and inclusive experiences can  
250 be had by all participants of a virtual or hybrid conference, both technologically and socially. As virtual conferences continue  
251 to take place, with hybrid events becoming more frequent, the ways of ensuring inclusion and accessibility will grow, with  
252 new ideas and technologies always emerging. Therefore, the below guidance should be taken as advice rather than as rules.

253 **3 Stages in event planning**

254 **3.1 Stage 1: Pre-event planning and event design**

255 **3.1.1 Who?**

256 Often event planning begins when several people come together to discuss ideas, before the formation of an official planning  
257 committee. During these early discussions, several aspects should be thought about (e.g., target audience(s), title/theme,  
258 organisational roles, timelines, communication strategies). Early decision on the precise event theme and target audience is  
259 important for every other step, and will be used as a foundation for communication and accessibility planning. During these  
260 early stages, ensuring diversity and inclusivity of those involved is crucial. Be proactive in inviting early-career colleagues  
261 and those from historically marginalized groups who might not otherwise become involved. Consider ways for marginalized  
262 groups to amplify their voices during the design stage of an event, and consider compensation for any time given to volunteers  
263 (e.g., discounted registrations, society membership, or monetary compensation). It is important that volunteers are valued and  
264 not invited to tick a diversity box. Everyone’s opinions and ideas need to be listened to and discussed. Furthermore, involving  
265 a broad range of people means that specific considerations for different marginalized groups are less likely to be overlooked.  
266 In the presence of a team of organisers from a diverse range of backgrounds who are treated equitably, organisers and attendees  
267 alike will likely feel more able to raise any foreseen issues before the event, thus reducing the likelihood of negative  
268 experiences.

269  
270 *Target audience:* Work out who the target audience(s) is for your event and how best to reach them. Different audiences may  
271 be more familiar with different platforms or have different needs or expectations of an event. Different approaches or structures  
272 of an event (or event series) may be required depending on your audience because people engage in different ways (e.g.,  
273 lecture-style, panels, open dialogue discussions, audience participation).

274  
275 *Presenters:* If inviting/reviewing applications for speakers or other event roles, aim for a broad and diverse range of presenters  
276 to widen representation. Inclusion statements and codes of conduct can help, but still many events fail to provide a diverse line  
277 up, restricting the range of perspectives and worldviews available. If running an event with invited speakers, consider fee  
278 waivers for speakers at your event. This is particularly important for EDI-related events, where many speakers often carry out  
279 their work on a voluntary basis. Depending on the scope of your event, it can be a good idea to encourage people to talk about  
280 both their research and EDI-related concepts during the same presentation.

281 Avoiding tokenism and ensuring the most appropriate people are selected for the event you are organizing is crucial.  
282 Tokenism, where someone is invited because of their gender, socio-economic status, ethnic background or other characteristic  
283 to meet quotas, undermines equity movements and does more harm than good to EDI work, reducing the benefits of a truly  
284 diverse community in terms of diverse perspectives and ideas (Kamalnath, 2020). If it proves difficult to identify diverse  
285 experts or speakers, rather than assuming there are none, re-evaluate it from a different perspective and consider alternative

286 ways (e.g., connecting with specialized groups) to reach people outside of the committee’s network. This may require more  
287 pre-planning in order to find the best people for a topic or talk, but meaningful diversity and inclusion take time and effort  
288 from everyone.

289 When potential speakers for an event have been decided upon, make sure to communicate clearly with them at an  
290 early stage. The exact format, purpose and length of a talk should be shared, along with any deadlines (e.g., for pre-recorded  
291 talks) as soon as is feasible. Similarly, if inviting a speaker, it can be a good idea to explain why you feel they would be a good  
292 fit for the talk, and ask for suggestions of alternative/additional speakers to try and reach new networks. Share any accessibility  
293 information (see Section 3.1.6) and format requirements with speakers and panellists early in order to help them with the  
294 preparation of talks. If a panel discussion is planned, communicating any planned questions before the event can ensure the  
295 event is more accessible to many people (Nocon, 2021). A pre-event session or ‘dress rehearsal’ can give volunteers, invited  
296 speakers or panellists the opportunity to familiarise themselves with the platform, ask any questions and reduce uncertainty of  
297 how the event will run on the day (Nocon, 2021).

298

### 299 **3.1.2 When?**

300 During this stage, there are several decisions that need to be made to help streamline the rest of the event planning: When  
301 should we run the event? Is there a cycle for events like this? What permissions need to be sought? Can we tag onto a larger  
302 event which will increase our audience or should we do it alone?

303

304 *Time zones:* In which time zones are your target audience and speakers? Will you need to rerun certain sessions to facilitate  
305 reaching a wider audience? If you are working across multiple time zones, what steps can be taken to ensure accessibility?  
306 Providing pre-recorded talks before the event can allow people to submit questions and become more involved, while providing  
307 a recording of the event afterwards can allow it to be shared with people who could not attend live. Furthermore, consider  
308 providing a platform for continued discussions after the event to allow participants unable to attend live to share their opinions  
309 and ideas.

310

311 *Dates for the event:* When choosing dates for the event, researching possible time clashes early is important to avoid any issues  
312 later. This should include identification of national holidays, religious and holy days or times, and any other events that may  
313 restrict attendance for some people. Avoid clashing with other conferences in similar or adjacent fields. The timing of an event  
314 may limit participation from particular groups and reduce diversity of participants.

### 315 **3.1.3 Budget**

316 Online conferences do not have many of the associated costs of an in-person event, such as room hire, catering and printing,  
317 but there are still likely to be some, particularly for technical support and accessibility planning as many free virtual platforms  
318 have limited capabilities (Barrows et al., 2021). Thoroughly research the various options to decide what mix of platforms and

319 tools is most suitable for your event (see Section 2.6). If you do decide to charge attendance, try to minimise the fees and  
320 consider waivers for attendees from middle- and low-income countries. Be transparent to participants about where the money  
321 is being spent.

322 If running a hybrid event, the fees for those attending virtually should be considered carefully. Although many of the  
323 costs associated with in-person attendance do not apply to someone attending remotely, some costs remain, such as speaker  
324 expenses and running the online platform. The geoscience community has yet to identify an appropriate way to charge for  
325 virtual attendance at hybrid conferences, but for example, the Mineralogical Society of the UK and Ireland typically charge  
326 virtual attendees fees 40–60% of those for in-person attendance. Other conferences, such as the European Geosciences Union  
327 (EGU) have charged a slightly reduced registration fee for virtual attendees of their General Assembly. However, many events,  
328 such as the American Geophysical Union (AGU) Fall Meeting 2023 (AGU, 2023) still charged registration rates for virtual  
329 attendance at the same rate as in-person participation, without clear explanation of why virtual costs were so high, reducing  
330 accessibility to participants with limited funding.

331 However, there is a concerning trend of events not considering a virtual component due to potential high costs or fear  
332 of the unknown. When asking event organizers why there is no virtual element to an in-person event, the authors have  
333 frequently been told that this would require a full AV set up, which would be very costly and outside the budget of many  
334 smaller events. Alternatively, the authors have been told of dwindling attendance online as a reason for dropping virtual  
335 components, but this may be more linked to lack of true engagement opportunities online or high costs for virtual attendance  
336 as mentioned above. There are several simple steps that can be taken to include virtual components, including the use of  
337 microphones by in-person attendees for questions/talks (which are generally used at most in-person events as a norm) or  
338 sharing presentations through the virtual platform software rather than just pointing a camera at a screen. Several simple steps,  
339 which do not require significant funding, can be undertaken to create a more inclusive experience, including asking attendees  
340 in advance, acquiring sponsorship or doing research into alternative ways to engage. Virtual components should not be  
341 dismissed before true consideration of how they can be included.

### 342 **3.1.4 Technology and event format**

343 Virtual events can offer much more flexibility than in-person events. Common virtual-event structures include a one-hour  
344 panel discussion or webinar, or a more extensive series of short talks and discussions. With no need for the audience to travel  
345 to the location of the event, sessions need not be consecutive or run on subsequent days. Talks may also be made available on  
346 demand, allowing participants to pre-watch and share questions in advance to allow engagement beyond the live presentations.  
347 There are opportunities to combine multiple formats through virtual events, with a level of flexibility not previously available.  
348 The format used should be adjusted to reflect the specific goals of the event (dissemination of research results, audience,  
349 participation, feedback, networking, etc.). A good approach is to make fundamental decisions about structure (e.g., platform,  
350 talk availability through recordings/live presentations, poster session formats, hybrid or fully virtual format) as far in advance  
351 as possible, announcing details early in a clear, accessible and transparent way. Similarly, many people are not familiar or

352 comfortable with some technologies and can get overwhelmed by new platforms and software and overly complex instructions,  
353 resulting in their exclusion from participation. Consider ways to overcome this such as making instructions as clear as possible,  
354 including annotated screenshots to help guide participants, or offering support through correspondence with participants and  
355 speakers.

356 There are several types of platforms and technologies which can be used for online events, each of which have  
357 different features and capabilities. As well as standard video-conferencing platforms such as Zoom and Microsoft Teams,  
358 additional live streaming services such as YouTube, Streamyard or Twitch may be used to reach a wider audience. Ancillary  
359 services may be used alongside the main event platform in order to increase audience participation and inclusion (e.g.,  
360 AhaSlides, Slideo) or to facilitate networking (e.g., Gather Town). Consider that many platforms or services may be  
361 unavailable in some countries, and consequently alternative ways of engagement may be needed to ensure full accessibility,  
362 depending on the target audience of the event (such as using additional live streaming services and uploading recordings and  
363 transcriptions to alternative video hosting platforms afterward). Similarly, different platforms have different accessibility  
364 features; consider whether it offers options for reliable captions and screen-reader compatibility when deciding where to host  
365 your event. When choosing a platform or technology for your event, ensure they support the needs of your event. If possible,  
366 ask the providers of the platforms you are using or find information online for aspects such as streaming capabilities and  
367 limitations, design options of events, reporting metrics, plugin options, customer support, and other accessibility features.  
368 Importantly, test the application of any platform or tool in advance of running the event to ensure it works in the way that you  
369 had desired.

### 370 **3.1.5 Promotion and communication strategy**

371 The promotional strategy will depend on your target audience. Different target audiences mean different ways of  
372 communication need to be considered. How will you ensure that event information is shared with all target audiences? How  
373 will you reach audiences outside of your network and engage people who are not traditionally involved? If your event is open  
374 to everyone, consider how your promotional strategy will make it clear that all people are welcome. For communication with  
375 speakers and other participants, announce deadlines early and remind people when they are approaching.

376 Social media platforms can be a great tool for spreading the word about an event, along with disseminating a  
377 registration link. Consider using social media platforms like Facebook, LinkedIn, X, Instagram, YouTube, TikTok, or any  
378 other platforms you may be able to engage with potential participants. However, other methods should not be forgotten as  
379 many people do not engage with social media. Consider targeted email campaigns, printed posters for notice boards, and  
380 inclusion in newsletters and mailing lists. When utilising these methods, consider the accessibility of the content being  
381 distributed. Ensure the use of alternative (alt) text for online content and accessible design in the generation of any graphics  
382 (Section 3.1.6; Chiarella et al., 2020; Jackson, 2020). A social media campaign may help gain momentum and get the most  
383 interaction with other stakeholder groups. Plan several posts before the event, such as a save the date, speaker introductions,  
384 description of themes and registration links in the run up to the event to help increase engagement. Ensure adequate time to

385 share the details as it can take a while for details to be circulated. Accessibility of social media plans should be discussed in  
386 advance to avoid inadvertent exclusion. Working with other groups to share event details can also help to reach a wider  
387 audience. Similarly, these groups could be used to discuss ideas and gain feedback on plans.

388 A word of caution: even for free events, it is a good idea to require prior registration by the participants. Unfortunately,  
389 there have been instances where meeting links were shared publicly on social media, resulting in so-called ‘Zoom bombings’,  
390 where individuals shared inappropriate content or otherwise disrupted the session. Prior registration minimizes the risk of such  
391 disruptions. Additionally, a designated person should be charged with handling such situations promptly by blocking and  
392 removing that individual.

### 393 **3.1.6 Specific tips for accessibility and inclusion**

394 *Closed captions/subtitles:* Closed captions or subtitles are critical to maximise engagement with any event for a variety of  
395 reasons. For example, people with hearing impairments and people whose first language is different from that of the conference  
396 may depend on these to fully engage with the material being presented (Cooke et al., 2022; Dello Stritto and Linder, 2017).  
397 Captions or subtitles may help people from all backgrounds to keep focused on the materials being presented, or if they are in  
398 a noisy area, as not everyone has access to quiet working spaces. It is important to highlight that closed captions (assumes  
399 audio cannot be heard, includes sound effects) and subtitles (dialogue transcriptions only, assumes other audio can be heard)  
400 offer different benefits, and for any event the more relevant form should be selected (Rev, 2021).

401 Closed captions/subtitles can be deployed in a number of ways: many virtual event platforms offer in-built auto-  
402 generation options and third-party artificial intelligence (AI) services are also available, though there may be issues with  
403 accuracy if using auto-generated captions (Besner, 2019; Leduc, 2020). Other services, such as Communication Access  
404 Realtime Translation (CART, 2024) have reviewed positive reviews, but if going with auto-captioning, research on the  
405 accuracy and reliability of the service should be undertaken. Human transcription services are often more accurate than auto-  
406 generated and so are preferable, but they will typically cost more and may not be possible live. Research before the event is  
407 needed to see what options are available and which service is available in your region or meets your audience’s needs. Legal  
408 requirements for closed captions during virtual events vary with geography and institution so check those relevant to you  
409 before making any decisions. However, if the event is hybrid, it is crucial to ensure in-person attendees use a microphone so  
410 all, including virtual attendees, can clearly hear the comment/questions/talk. Online attendees also need to use good audio  
411 connections, but the traditional ‘shouting a question to the speaker’ approach of many in-person events, will exclude online  
412 attendees completely, and consequently result in inaccurate captions and transcriptions.

413  
414 *Transcriptions:* Transcripts can be helpful in keeping a record of discussions and debates that take place during an event, and  
415 can consequently be used as a resource to write up conference papers or blogs to share outcomes after the event. These can be  
416 auto-generated by most video conferencing platforms or provided by a third-party AI service. Check the quality of any  
417 transcripts before providing them to attendees, particularly if auto-generated by software. However, the use of third-party

418 transcription services comes with a potential breach of privacy: all captioning services require access to speakers' content, and  
419 depending on terms of service associated with individual services may claim exclusive rights to processed user content. As  
420 well as a potential privacy violation for the individuals affected, this could be counter to institutional protocol on data  
421 protection, and can potentially violate the EU's General Data Protection Regulation (Distelmeyer, 2023). Choice of an AI  
422 closed captioning service should therefore consider data usage, and informed consent must be obtained from all speakers  
423 before a captioning service is used. Data protection is also something that should be considered for use of all online platforms,  
424 especially those that collect user information (e.g., emails), but more discussion on data protection needs to be had to fully  
425 understand the potential impact.

426 Before the event, a person should be assigned transcription reviewing, as this can be a time consuming process. Also  
427 consider the availability and accessibility of these resources: Can anyone access them? Will they be shared in a follow up  
428 email or linked with recordings? Do people need to contact the organizing committee for them? Whatever the decision, this  
429 needs to be communicated clearly to participants before and during the event.

430  
431 *Languages:* Many people may be presenting and participating in their second or third language. Be patient and respectful of  
432 the fact that people may be more accustomed to a different language than that which the event is held in. Consider running  
433 parts of the event, including social events, in a language other than the main language, depending on the demographic of  
434 participants. Similarly, providing support for speakers that may not be presenting in their native language may help ensure  
435 people are comfortable while presenting. These could include mentorship opportunities, practice runs or feedback services,  
436 and could significantly help people's confidence in taking part in an event. As with transcripts and closed captions, AI can  
437 offer the possibility of live translation, partially circumventing language barriers and improving accessibility, although this is  
438 still an emerging technology and has limitations. Sign language interpreters offer another way for people with hearing  
439 difficulties to engage with content. However, forms of sign languages vary globally, and consideration needs to be given to  
440 what is most relevant to your event, whether including sign language options would be appropriate, and if not, what alternatives  
441 can be utilised to ensure accessible content.

442  
443 *Accessibility in presentations:* Issue guidelines to participants about how to make slides accessible (AHEAD, 2023a; b). In  
444 particular, be mindful of colour schemes and typefaces which may cause legibility problems for participants with colour vision  
445 deficiency, dyslexia or similar (Wickline, 2000; De Paor et al., 2016). There are several resources available to check  
446 accessibility (e.g., Colour Oracle, Coblis - Color Blindness Simulator). Further, the amount of text on a single slide, the colour  
447 of the text and the contrast between text and background are all important considerations. Avoid placing important information  
448 at the bottom of the screen where it may be covered by subtitles/captions. Marks (2018) is one example of a comprehensive  
449 guide on how to make and deliver an accessible and inclusive presentation which could be shared in advance to help  
450 presentation planning, however, there are numerous options available to utilise.

451

452 *Social media:* If planning a social media campaign (as described in Section 2.1.6), the accessibility of posted content needs to  
453 be thought about in advance. Each platform offers different accessibility features that should be researched in advance. Ensure  
454 the use of alt text if using graphics, and that graphics are designed in an accessible way (e.g., fonts, colour schemes). There  
455 are many other considerations, such as avoiding the overuse of emojis or ensuring the use of capital letters in hashtags (i.e.,  
456 camel case) to help screen readers engage more meaningfully with content. Consider assigning dedicated people to research  
457 social media accessibility to ensure your content is accessible to everyone.

458

459 *Other considerations:* The inclusion of breaks during an event to allow rest is a crucial step to allow people to recover from  
460 screen-time and prevent overstimulation. For online conferences, this could take the form of ensuring a conference’s schedule  
461 is well staggered to allow breaks and rest periods. For in-person elements of hybrid events, follow best practice for in-person  
462 events (e.g., separate spaces for different needs). There are several extensive reviews of in-person accessibility needs which  
463 can be explored, but which are not the focus of this paper, including, EOWG (2022), Council of Ontario Universities (2016)  
464 and Felappi et al. (2017).

465

### 466 **3.1.7 Presentation format**

467 Virtual events offer a unique opportunity to have various styles of presentation. Talks within a conference session (or similar)  
468 may be either live (given on the day), pre-recorded (recorded in advance, with the recording shared during the event), or a  
469 combination of the two. There are many benefits to both styles, but pre-recorded talks allow for more accessibility options,  
470 and they will ensure exact timings are maintained during the event. This is particularly useful if running a larger-scale  
471 conference with multiple short talks or with multiple parallel sessions. However, care should be given to what your choice  
472 means in terms of accessibility as screen readers may not be able to engage with presentations shared through a pre-recorded  
473 video (Vasquez, 2021), so this should be made available beforehand to allow people to engage more meaningfully. There are  
474 several pros and cons to both formats, with some summarised in Table 1 below. There is room for a combination of these two  
475 approaches: for example, pre-recorded talks could be made available as a backup in case of internet connection issues, or  
476 pre-recorded videos could be livestreamed as if given live but with pre-prepared subtitle files. A willingness to be flexible in  
477 your approach to accommodate the different needs of your presenters and attendees will go a long way, though it is also  
478 important to be mindful of going too far the other way and creating too much of a logistical burden for the event organisers.

<b>Live talks during fully virtual and hybrid events:</b>	
<b>PROS:</b>	<b>CONS:</b>
<ul style="list-style-type: none"> <li>• Less preparation time for both speakers and organisers when talks are presented live, as no re-recording is needed to change any mistakes and organisers do not need to assign someone to review videos prior to an event.</li> <li>• More familiar to speakers.</li> <li>• Makes live questions and responses more seamless.</li> </ul>	<ul style="list-style-type: none"> <li>• Requires steady internet with no unexpected outages.</li> <li>• Microphones or ensuring a quiet space while speaking is important for clear communication.</li> <li>• Requires presence at the computer at certain times, creating challenges with time zones, childcare, other work obligations, etc.</li> <li>• Only live captions are possible, which may not be perfect and require additional funding.</li> </ul>
<b>Pre-recorded talks:</b>	
<b>PROS:</b>	<b>CONS:</b>
<ul style="list-style-type: none"> <li>• May decrease the potential for stage fright or anxiety as the speaker can remove errors.</li> <li>• Allows flexibility for recording time as the presentation is submitted in advance, and it allows organizers to plan for effectively as they will know the exact time for each talk.</li> <li>• Presence at the time of the event is not essential, although it is still useful/important to be present to answer questions (see below) and to avail of possible networking opportunities.</li> <li>• Potential for talks to be watched “on demand”, although consent should be sought from participants for talks to be hosted online in a way that facilitates this.</li> <li>• If videos are clearly recorded, the audience would likely not be aware of it being pre-recorded unless told in advance and could help avoid technical issues with speaker internet connection.</li> <li>• Crucially, allows time for preparation of accurate subtitle files rather than relying on AI. Subtitles can be checked against the video in advance and corrected if necessary. Transcripts can be prepared in advance and distributed prior to, or on the day of, the conference, allowing people to follow along with the talks on-screen.</li> <li>• Participants can choose to watch the video at a faster or slower speed, according to their needs.</li> </ul>	<ul style="list-style-type: none"> <li>• The presentation may take longer to prepare, if mistakes (in content/accessibility) are noticed after submission, re-recording can create an additional burden and can cause significant delays, leading to undue stress.</li> <li>• Who is responsible for providing captions of the video? Not everyone has experience or awareness on how to do this – will you be providing guidance or assigning someone to produce the captions? Presenters could be given guidance on how to create captions using different platforms, or if pre-recording, some technologies provide auto captioning (e.g., google slides).</li> <li>• Video recording tools are not necessarily intuitive; at the very least this requires recommendations from organizers about which software are available to use. Additional resources may be required for people to be able to produce their own videos.</li> <li>• If people are not familiar with sharing videos, technology challenges may cause delays to schedules, so practice runs are needed to avoid any glitches on the day of events. Provide recordings if participants are not able to attend a practice session.</li> <li>• Not suitable for all kinds of sessions. Although they can be recorded and rewatched afterwards, panel sessions are generally delivered live.</li> <li>• Some people do not like watching pre-recorded talks as it seems less personal.</li> </ul>

479 **Table 1:** Summary of the advantages and disadvantages of live and pre-recorded talks for hybrid and online events.

480 **3.1.8 Other considerations for the pre-event organising stage**

481 *Code of conduct, etc:* An equity, diversity and accessibility statement should be prepared and shared in advance of the event  
482 through promotional materials, social media postings, website pages and any other platforms available. This should be shared  
483 again during the event introduction. Take time before the event to come up with a code of conduct and other housekeeping  
484 information and provide this document to both speakers and attendees before the event. A code of conduct should include a

485 list of what is/is not permitted, and also any consequences there may be for those who choose not to abide by it. Consider  
486 having a way for people to signify they need assistance from a member of the conference team, such as using a specific emoji  
487 reaction included in most video conferencing software. Give clear guidance on how violations will be reported and dealt with  
488 (e.g., email, private chat function, removal of participants). Consider where participants will go for assistance during both fully  
489 virtual and hybrid events in advance to ensure help is given in an effective manner.

490  
491 *Planning document:* Create a central document or record with all details that may be needed on the day before the event. This  
492 can act as a central database for all relevant information and help address any challenges that arise during the event. This  
493 should contain any prepared statements (e.g., code of conduct, Q&A process, information on recordings if available, follow  
494 up statement) along with logistics information (speaker lists and contact details, access links, announcements). All volunteers  
495 should have access to this resource before the event. A similar document should be designed for presenters to give all relevant  
496 information, links, pre-planned questions, and other logistics and help ensure smooth running on the day.

497  
498 *Pre-event accessibility questionnaire:* To help ensure the needs of participants are met for your event, a pre-event questionnaire  
499 should be thought about and distributed to gain insights into the accessibility needs of your participants. This form could be  
500 linked with registration, depending on the platform being used (e.g., EventBrite) or circulated through social media/email lists.  
501 This will greatly help planning, and ensure that people's needs are met for full inclusion during the event.

502  
503 *Networking Features:* Consider innovative networking features as a way to help foster new engagement during online events.  
504 This is particularly important for hybrid events which may not have large online engagement from in-person attendees who  
505 fear missing out on other opportunities. Restrictive networking opportunities may reduce online engagement, so consider what  
506 your platforms offer to increase connectivity (e.g., group chats, roundtables, matchmaking). Consider gamifying online  
507 elements to promote wider engagement and networking.

### 508 **3.2 Stage 2: During the event**

509 Much of the work for the actual running of the event will have been done in Stage 1, and this is why it is such a crucial step in  
510 (virtual) event planning. This section discusses how some of the more specific features may run on the day, with accessibility  
511 in mind, and includes elements that should be defined in the pre-event stage.

512  
513 *Volunteers and staff:* What volunteers or staff are needed for during the event? While many events will need volunteers and  
514 staff to host sessions or run discussions, there are many other roles that should be considered beforehand to ensure the smooth  
515 running of an event, including technical support. All volunteers and staff should be confirmed before the event with  
516 expectations clearly outlined and know what their role is. A plan for communication during the event should be considered, to  
517 deal with daily communication and any issues that arise (e.g., messaging platform, emails).

518

519 *Questions from the audience:* Make sure the audience has the option to ask questions either verbally or in text (e.g., through a  
520 chat box function) and clearly explain how questions can be asked at the start of the event to ensure full inclusion. Many  
521 platforms offer a ‘raised hand’ feature that can be used to avoid disruption to a presenter and if audience members have the  
522 option of asking a question in real time. If the event is also being streamed to another platform (e.g., YouTube), ensure someone  
523 is responsible for monitoring for questions on the second platform to allow all audiences to engage. Consider not recording  
524 the questions and answers section to lower the hurdle of asking a question. During both online and hybrid events (particularly  
525 during the in-person part of a hybrid event), make sure all people asking questions use a microphone as some assistive  
526 technologies are dependent on their use.

527

528 *Introductions:* When introducing and talking to people, use gender-neutral language, do not assume pronouns, and if possible,  
529 ask people their pronouns before the event. This can form part of the introduction package that should be developed before the  
530 event (Section 2.1.9). If a mistake happens, there are a lot of resources that can help to learn the correct way to respond (e.g.,  
531 Pronouns.org, 2023). Avoid binary turns of phrase like ‘Ladies and Gentlemen’ or gendered terms such as ‘Welcome Guys!’,  
532 which may inadvertently exclude people with non-binary gender identities. Encourage people to include their pronouns in their  
533 online tag. However, there are many reasons why people might not want to publicly declare their pronouns, so this should  
534 always be optional. When speakers introduce themselves, it can be helpful for people with visual impairments for them to give  
535 a short visual description (e.g., I have brown shoulder-length hair and today I am wearing a stripy white and yellow jumper)  
536 but do not force this as not everyone will be comfortable with carrying out self-descriptions (see IDEA, 2021 for other  
537 examples).

538

539 *Camera etiquette:* Do not insist that cameras be switched on, as this may not be possible for every attendee, and people may  
540 request not to be on camera. Streaming attendees’ videos can be problematic for people with a poor internet connection. Video  
541 fatigue (Bailenson, 2021) is also a reality, and if an event is going on for several hours, people need a break from being  
542 watched. Request participants not have moving backgrounds, as these use excessive bandwidth and may be distracting for  
543 other participants.

544

545 *Event etiquette:* Remind people of the code of conduct at the start of every session including how/to whom to raise any  
546 concerns. If parts of the session are being recorded, let the audience know this at the start of the session.

547

548 *Data and analytics:* If the chosen platforms allow access to data and analytical tools to measure online engagement, make sure  
549 to avail of them during the event and use them during post-conference review.

550

551 *Social media activity:* Using social media during an event, to share discussions, ideas and outcomes can be a great way to  
552 encourage participation from a wider audience. Permission should be obtained for sharing anyone’s research or image, and  
553 contents should be shared with accessibility in mind (e.g., alt text).

### 554 **3.3 Stage 3: After the event**

555 Any activities for the post-conference phase (e.g., follow-up emails) should be planned in advance because people often need  
556 to take time away after event planning and there may be limited volunteers and staff help for carrying out any after-the-event  
557 plans. There are several aspects that should be considered, with some examples below.

558  
559 *Recordings and Transcripts:* If providing recordings, ensure that full, accurate transcripts are available and that any  
560 subtitles/captions uploaded are correct. Reviewing captions and transcripts can be a time-consuming process, so ensure that  
561 enough volunteers and time are available for this. Decide in advance how soon after the conference you expect these to be  
562 available, communicate this to participants and keep to this deadline.

563  
564 *Follow-up email:* Whilst this is optional, it can be helpful to direct attendees (or those who registered but could not attend) to  
565 any available recordings and relevant links and information and should be planned in advance This also provides an opportunity  
566 for people to give feedback if requested through questionnaires or polls (see below). Make sure to provide a way for participants  
567 to share their experiences and thoughts which can be used to build on for future events.

568  
569 *Feedback:* Measuring feedback can be difficult, but a short questionnaire (or equivalent) could be included in the follow-up  
570 email. This will require additional support to review and analyse the feedback, but it can be a great way to learn how to improve  
571 accessibility for future events, which will be particularly useful if running an event for the first time. Consider asking for  
572 feedback related to session engagement, diversity, technology experiences and overall attendee enjoyment and accessibility.  
573 However, be mindful of overwhelming the audience with surveys. There are different ways to collect feedback (e.g., polls on  
574 virtual platforms, interactive presentations, message boards), so consider what works best for your event and research what  
575 other events have done to maximise feedback collection. Additionally, feedback should be something people have the  
576 opportunity to provide throughout an event, not just afterward. Consider using QR codes and posting links regularly for  
577 attendees to access feedback forms.

578  
579 *Communication channels:* How can people get in touch with you/the organising team post-event? If using an email, someone  
580 will need to monitor this and answer any questions. Some events may also have corresponding Slack/Discord/other platform  
581 channels to help participants network and discuss more between themselves. If this is something to be launched for the event,  
582 it will need consideration at an early stage to ensure engagement and accessibility. Also consider how long after the event this  
583 will continue to be live, and communicate this to participants early.

584

585 *Certificate of attendance:* Some participants may be required by their workplaces or university to produce a certificate of  
586 attendance for the event. Appoint a volunteer to respond to such requests.

587

#### 588 **4. Conclusions & Summary of Lessons Learned**

589 The global COVID-19 pandemic caused a drastic shift in the way people communicate with each other. Many people were  
590 forced into working from home due to lockdowns, causing working groups and research teams to utilise video conferencing  
591 technologies far more frequently to ensure continued collaboration and connectivity. The restrictions on travel both locally  
592 and internationally also had a drastic impact on geoscience events. As the pandemic progressed, many planned in-person events  
593 began to be redesigned for a virtual platform, with novel and innovative ways created for participants to communicate and  
594 network with each other. This virtual network has led to many new collaborations between people who may have never met  
595 in-person, and it has also helped to strengthen relationships already in place, allowing for a more diverse, interconnected, and  
596 effective research community across the world.

597 However, this move to a virtual landscape was sudden and consequently consideration has not always given to the  
598 accessibility of these virtual platforms and events. Whilst we are currently seeing a resurgence in the number of purely in-  
599 person events, the use of virtual and hybrid platforms is likely to continue, with many virtually-based groups now in existence,  
600 and flexible and remote working options having been established. The move to a virtual and hybrid landscape also highlighted  
601 the geographical and socio-economic disparities of in-person event accessibility, with the financial and logistical burden of  
602 travel to events being felt by some researchers more than others. This has led to inequalities of opportunity and to biased  
603 attendances at international in-person conferences which do not represent the entire spectrum of researchers. Consequently,  
604 moving back to purely in-person events would dismiss the lessons learned in event accessibility over the past several years,  
605 and lead to the renewed exclusion of many people.

606 In cases where virtual components of an event have not been successful, future virtual elements should not be  
607 dismissed to avoid future exclusion (Niner, 2021). Reflection on why an event (or a component of one) was not successful,  
608 asking for feedback where possible, and learning from other examples is suggested to create recommendations for how to try  
609 and make future events more inclusive and engaging. It is important to discuss and plan accessibility and inclusion early in  
610 event planning to ensure a safe and engaging environment for all potential participants (Gibson, 2021). Virtual conferences  
611 will only become truly accessible and inclusive if the entire community actively works towards it (Niner, 2020), with active  
612 consideration and discussion of best practices for different people. This includes consideration of which communities are best  
613 served by best practice guidelines, and continual re-examination of procedure as technology and expertise develop new  
614 methodologies for increasing success of conferences for everyone. As new ways of interacting with each other continue to be  
615 established, we need to remember the lessons learned from the initial move to virtual events. If thought and consideration are  
616 not put into the virtual part of future online and hybrid events, then these will not be effective and may exclude most  
617 participants.

618

619 In summary, there are some key considerations identified that can help with event planning to act as a starting place for  
620 planning an inclusive and accessible virtual event:

- 621 • Accessibility needs to be part of the planning phase, not an afterthought.
- 622 • Decide early on the dates, length, purpose and title of the event, and communicate this information early and clearly.
- 623 • Ensure diversity of the planning committee and speakers to ensure different ideas and viewpoints are considered.  
624 Different perspectives are needed from the people that will be most impacted by the choices being made (e.g.,  
625 Kingsbury et al., 2020).
- 626 • Ask participants about their virtual access needs before the event and then ensure these needs are met throughout the  
627 event. Consider providing a way for people to communicate real time needs during the event and have a plan in place  
628 to address any challenges that arise.
- 629 • Clearly outline planning/time commitment involved for volunteers/organisers and decide on roles (and associated  
630 responsibilities) before the event, so everyone knows what they're doing and when they are needed (feeds into  
631 communication). Ensure enough volunteers or staff for the event being organized. It can be quite overwhelming to  
632 try to do multiple things (e.g., monitor chat and feed panel questions).
- 633 • Evaluation of the event can be achieved through a short survey (prepare this during the pre-planning phase) sent to  
634 participants shortly after the event. Asking about location/career stage/etc. can help monitor and evaluate where your  
635 network reaches and help in future event planning.
- 636 • Accessible and open communication is key! Ensure opportunities for people to provide and receive information on  
637 all aspects of the event.

638 While there are doubtless many other considerations around virtual accessibility not covered here, we hope that this article can  
639 provide a checklist for those who wish to curate more inclusive and accessible virtual events going forward. In addition, we  
640 have compiled an initial checklist to use as a starting point for planning (Supplement checklist).

## 641 **5 Author contribution**

642 ALD, VRD and BW contributed equally to the formation of the article, including the initial draft development. KM, RAW,  
643 AA, IC, CC, DY, MD, and LK all contributed to writing, reviewing and editing of drafts, and adding their experiences and  
644 ideas, leading to the submitted version.

## 645 **6 Competing interests**

646 No competing interests are known at the time of submission.

647 **7 Ethical statement**

648 This article was produced during volunteered time by the authors and was not funded by any external group or award. As no  
649 humans or animals were included in this work, and no personal information has been shared, no ethical review was required.

650 **8 Acknowledgements**

651 The authors would like to thank the reviewers for their comprehensive feedback and suggestions. Martin Griffin is also thanked  
652 for his insightful and detailed feedback, and those who engaged with us at the EGU 2024 conference, where we presented  
653 these ideas. Additionally, both editors are thanked for their guidance and feedback throughout the submission journey. While  
654 we still have more to learn, these different perspectives and ideas were invaluable to finalizing this article. This publication  
655 emanates from a collaboration between the UK Polar Network, Accessibility in Polar Research, the Equity, Diversity and  
656 Inclusion in Geoscience (EDIG) project (2022), and the Mineralogical Society of the UK and Ireland. The authors thank all  
657 the stakeholders who have contributed to the learnings and discussions shared in this article. In particular, we would like to  
658 thank the Birmingham Geo-Equality group for conversations during the initial stages of this article. The EDIG project is made  
659 up of several volunteers from around the world who have helped us all to design, organise and run several events, along with  
660 sharing their experiences and knowledge with the wider team - thank you to all of our volunteers (past and present) for all your  
661 time and effort in running the project. The EDIG project would also like to thank all of the supporting institutes, organizations  
662 and other geoscience initiatives that have helped EDIG plan and host events, along with sharing their knowledge and  
663 experience to help our own learning journey. The EDIG 2022 Conference was financially supported by the Institute of  
664 Geologists of Ireland (IGI) and iCRAG, the SFI Research Centre for Applied Geosciences. The Polar Early Career Conference  
665 2021 (discussions from which resulted in this paper) was organised by the UK Polar Network and financially supported by the  
666 UK NERC Arctic Office. Many thanks also to all the individuals who have encouraged and helped us to learn outside of our  
667 initiatives and groups – we are grateful that you took the time to share your knowledge and experiences with us.
