

# Supplementary material for statistical tests.

Jérémy Gueffier

This document contains the tables displaying the p-values of the t-tests computed for each variable and for each couple of clusters.

These tests were made to insure statistical difference between clusters. The tables display the p-values which are equal to 1 when two identical datasets are compared and indicates the probability of two data sets being equivalent.

T-Tests were conducted for the 23 variables driving the hierarchical clustering and for the 6 studied chemical species.

## P-Value CO2
