

2nd review of “The dehydration carousel of stratospheric water vapor in the Asian Summer Monsoon Anticyclone” submitted by Konopuka et al. to EGUsphere.

Thank you for replying the reviewer’s comments and questions. Almost replies were satisfied, however the following point is critical and the authors re-consider the point.

Major comments:

It is needed that the authors to consider whether Fig.5 is needed or not, because it is likely to mislead the reader, as it is actually the comprehensive interpretation drawing from the different air masses (both in time and origin). This reviewer recommends either remove Fig. 5 or left the Lagrange diagram (remove Euler part, left of Fig5.) with time-altitude-location information (by figure or description in text) clearly.
