

## **To the Editor**

In response to the final reviewer suggestions we have:

- 1) added one sentence to highlight more explicitly that we plan to repeat the simulations with changed atmospheric composition, and
- 2) reordered one sentence to make it clearer that we have rerun the reanalysis with changed boundary conditions for the same event.

We have also:

- 3) added a neglected reference to Meredith et al. (2015) which used a nudging approach to look at an extreme event earlier than the example previously given, and
- 4) added a thanks to the reviewers & a grant code into the acknowledgements.
