Images were modified to cater to individuals with colour blindness. Additionally, markers were strategically placed in specific areas to differentiate between variables.

The caption of figure 8 was modified slightly.

Previous version

TOZRE as a function of temperature for high reactivity period ([red](#) dots) and low reactivity period (green dots). Red and green lines indicate the exponential fit for the high and low reactivity periods respectively.

New version

TOZRE as a function of temperature for high reactivity period ([orange](#) dots) and low reactivity period (green dots). Red and green lines indicate the exponential fit for the high and low reactivity periods respectively.
