

Supplementary Materials

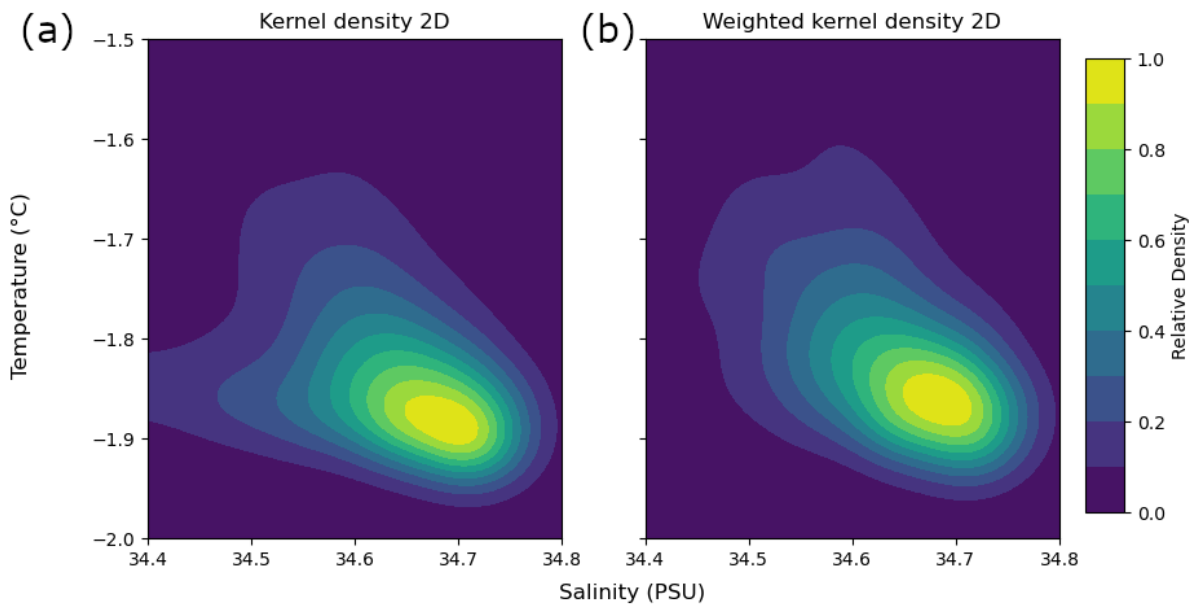

Supplementary Figure 1 The oceanographic information obtained from the Seal-attached CTDs is spatially represented for the years 2021 and 2022. The information for 2021 is displayed above, while the data for 2022 is shown below. Each color represents a different water mass.

5

Supplementary Figure 2. Schematic summary of diel changes in diving behaviors. During the day, pelagic preys move to deeper waters, consequently leading to an increase in the diving depth of Weddell seals, with a higher proportion of benthic dives observed.

10

Supplementary Figure 3 Kernel Density Plots of Dive Behavior in TS Diagram. (a) The kernel density plot of water temperature and salinity for each dive, illustrating the distribution of dive in the TS diagram. (b) The weighted kernel density plot, where the density is weighted by the number of PrCA (Prey Capture Attempts) events for each dive. Both plots are based on data collected from seal-attached CTD sensors, which provide temperature, salinity, and PrCA data for each dive. The density was highest around a salinity of 34.7 PSU and a temperature of -1.85 °C for both sides.

15

Supplementary Table 1. Metadata for captured Weddell seals

Identification	Age	Sex	Body Length	Capture Date	Logger Type	Tagged Part
329	Adult	F	2.60	2021-02-16	CTD-SRDL	back
