8 Supplementary figures

Branched GDGTs

9

10 **Figure S1.** Structures of branched (left and bottom right) and isoprenoid (top right) GDGTs.
 11 The 6-methyl brGDGTs are represented by prime ('). The structures of penta- and
 12 hexamethylated brGDGTs with cyclopentane moiety(ies) IIb', IIc', IIIb', IIIc' are tentative.

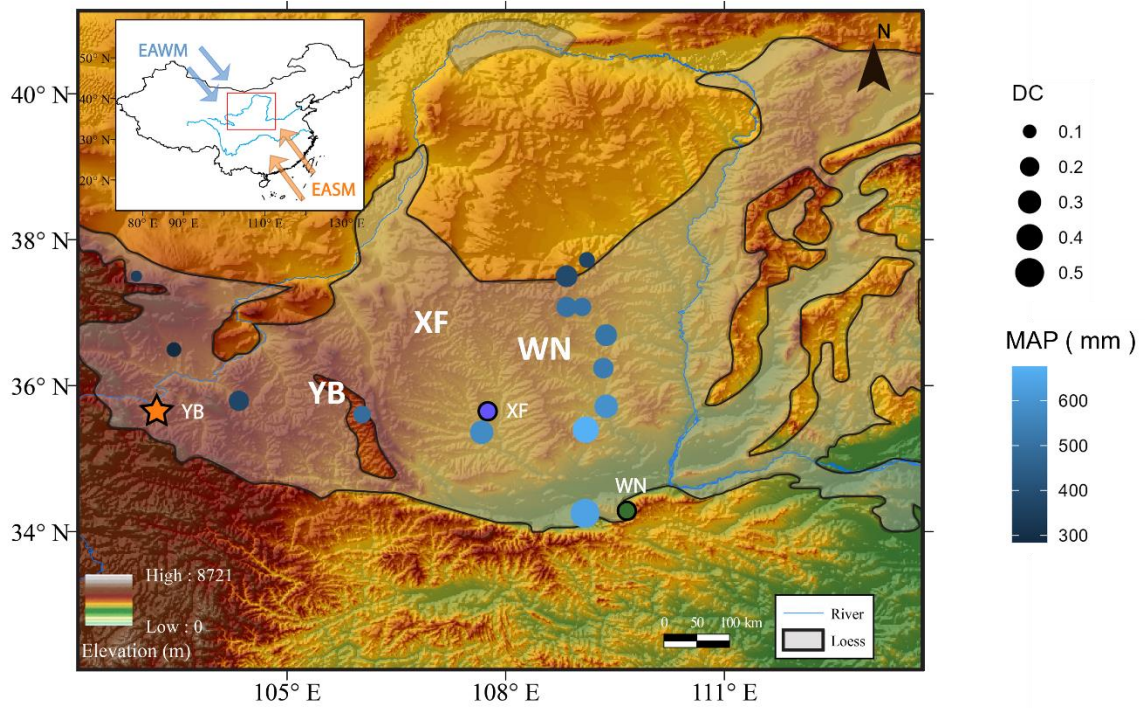

13

14

15 **Figure S2.** Monthly air temperature, precipitation, and relative humidity (RH) at Linxia city
 16 between 1999–2017, close to the Yuanbao section on the CLP. Data obtained from the China
 17 Meteorological Data Service Center, <http://data.cma.cn/en>.

18

20

21 **Figure S3.** Locations of surface soils from the Chinese Loess Plateau used for Mean Annual
22 Precipitation (MAP) calibration. The blue gradient and different sizes represent changes in
23 MAP and DC, respectively. The orange star indicates the section for this study, Yuanbao
24 (YB). Loess-paleosol sequences mentioned in the text are also indicated (Weinan, WN in
25 green circle, and Xifeng, XF in purple circle).

26

27

28 **Figure S4.** Wavelet power spectrum of degree of cyclization (DC) of brGDGTs from
29 Yuanbao. Color shadings indicate the power of the correlation.
