

Sticker et al.: Seasonality and scenario dependence of rapid Arctic sea ice loss events in CMIP6 simulations

I have read through the author response to both my comments and the other referee comments. I think the authors have done a great job addressing my minor concerns by highlighting variability, assessing “hidden sea ice loss”, and modifying figures. Overall, with these changes, I find the already well-written manuscript is clearer and the results are important. Well done, authors, and thank you for your diligent work and responses! I recommend this paper for publication.
