Table S2. Accuracy assessment of downscaling cross-validation in California: metrics include Correlation Coefficient (R), Mean Difference (MD), and Root-Mean-Squared Error (RMSE). Here, 'h' denotes elevation, 'Forest' pertains to forest land cover pixels, 'NoForest' to non-forest pixels, and '9 km' and '10 km' represent the resolutions of the climate data estimators.

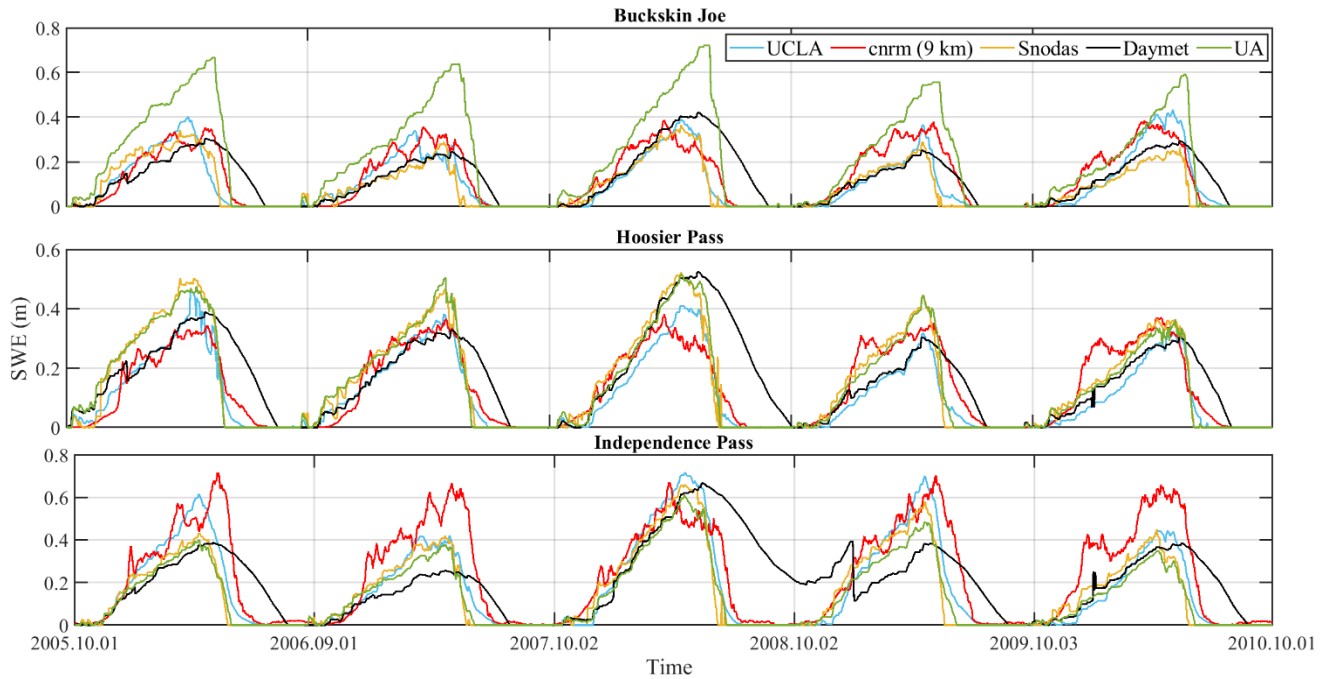

Fig. S7. The SWE time series spans a six-year period at the three highest elevations in-situ locations (Table 4) in Colorado. "UA" represents the University of Arizona SWE datasets. The downscaled SWE (\hat{SWE}) results were obtained from the 'cnrm-esm2-1' climate data at a 9 km resolution.

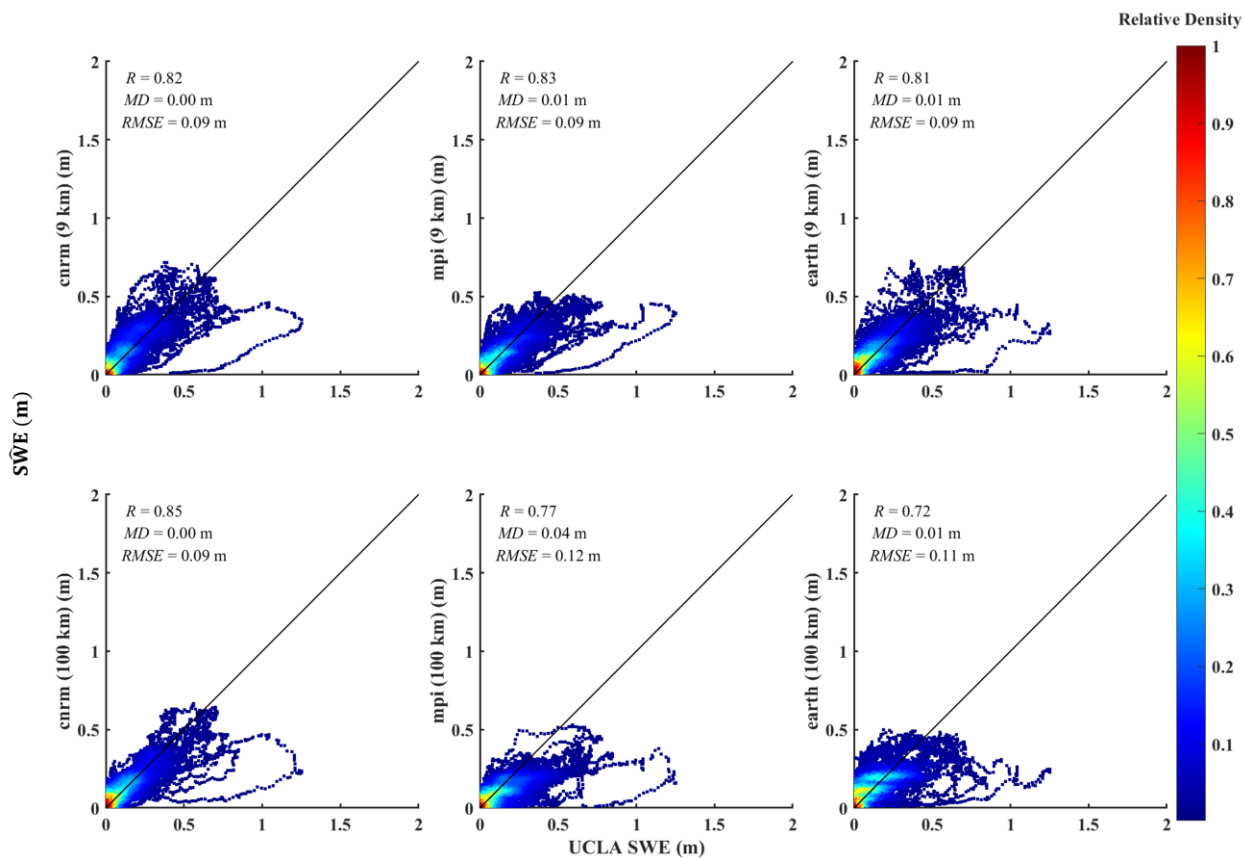

Fig. S8. A density scatter plot in Colorado from 2005 to 2010 compares in-situ data locations (Table 4) from UCLA SWE images to the downscaled SWE (SWE) values. The solid black line represents the 1:1 line. The displayed metrics include the correlation coefficient (R), mean difference (MD), and Root-Mean-Squared Error ($RMSE$). Only data with SWE values greater than 1 cm are included in the comparison.

Cross validation: Colorado

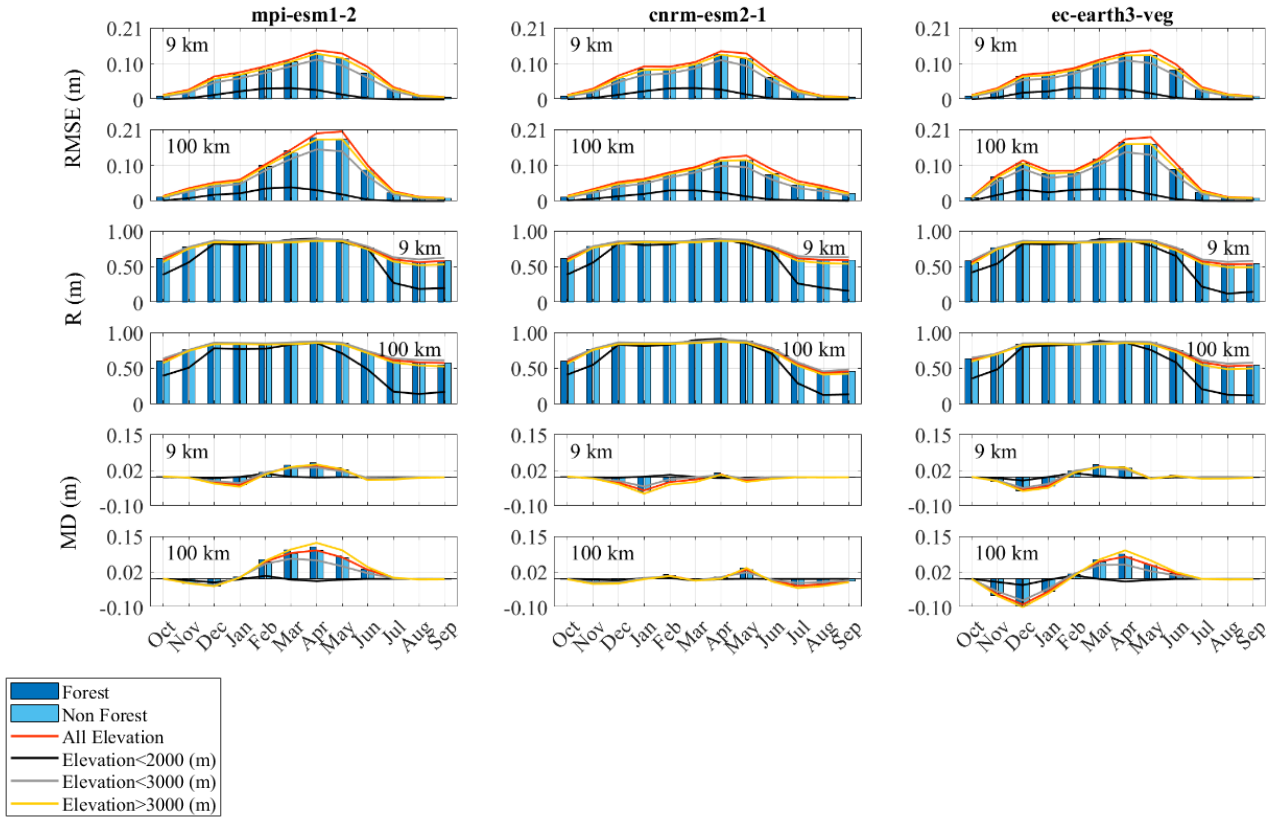

Fig. S9. Accuracy assessment of downscaling cross-validation, conducted in Colorado, over the six-year period from 2005 to 2010. Column titles indicate the results for downscaled SWE (SWE) using respective climate models as estimators. '9 km' and '100 km' refer to the resolutions of the climate data. The evaluation metrics include the Correlation Coefficient (R), Mean Difference (MD), and Root-Mean-Squared Error (RMSE). These metrics are considered in different elevation values and different land covers. In the legend, 2000 m < Elevation < 3000 m is shown as Elevation < 3000 m.

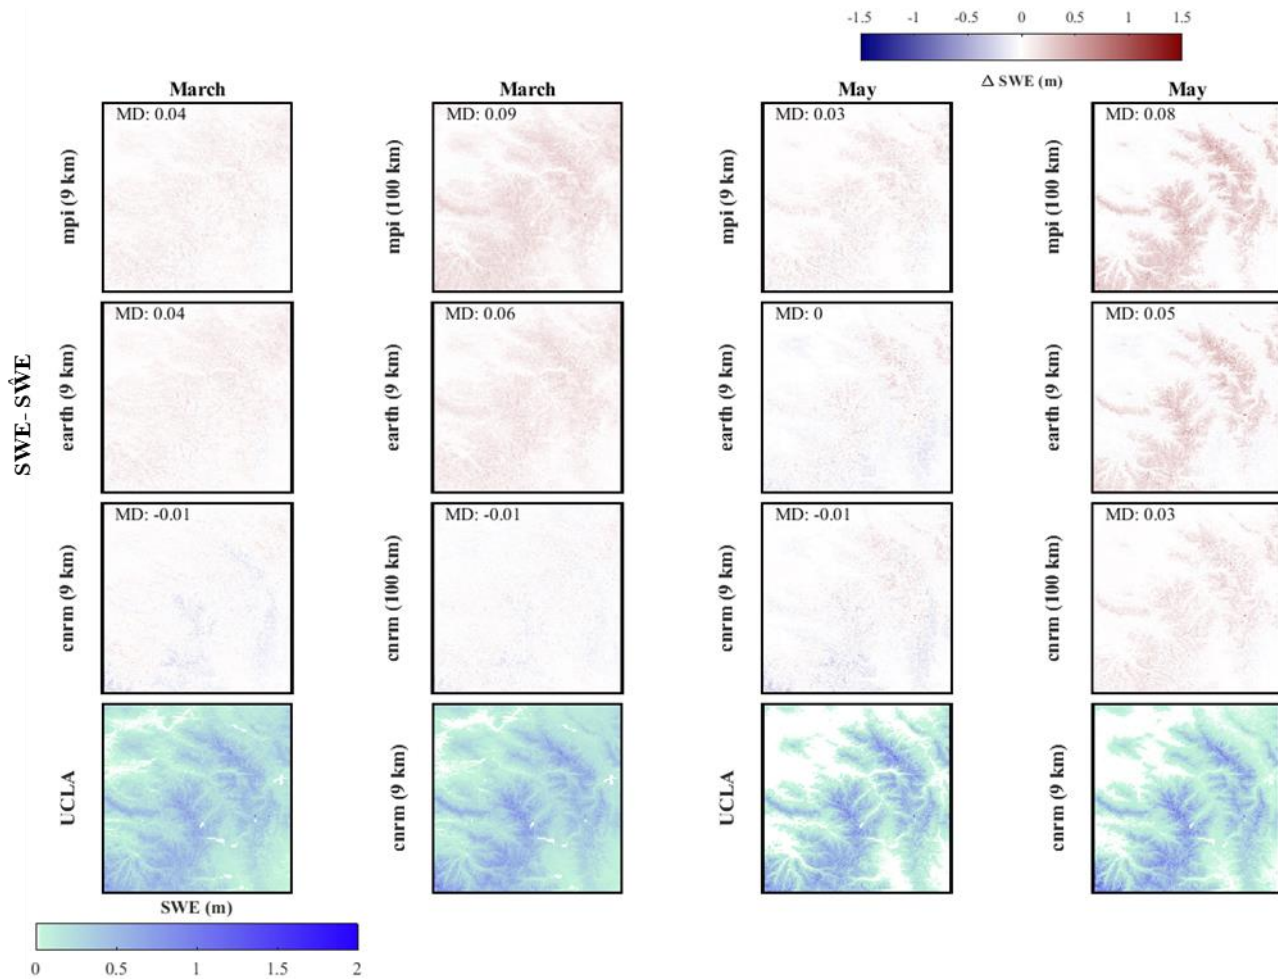

Fig. S10. Spatial assessment of the downscaling. The first three rows represent the mean difference between UCLA SWE and downscaled SWE ($SWE - \hat{SWE}$) over Colorado throughout the 6-year testing period (2005-2010) for two different months (March and May). The last row represents the averaged reference SWE (UCLA SWE) or averaged downscaled SWE (\hat{SWE}) throughout the 6-year testing period (2005-2010) for two different months (March and May). The evaluation metric includes Mean Difference (MD).

Table S4. Comparison of downscaled SWE (S \hat{W} E) or UCLA SWE with 1 km SWE from the SNODAS Dataset over California (CA) and Colorado (CO). Metrics displayed include Correlation Coefficient (R), Mean Difference (MD), and Root-Mean-Squared Error (RMSE). Consideration is given only to swe values greater than 1 cm. 'Forest' denotes pixels with forest land cover, and 'NoForest' refers to non-forest pixels. The terms '9 km' and '100 km' indicate the resolutions of the climate data estimators.

Fig. S11. The average mean difference of SWE over Colorado for the 6-year testing period (2005-2010) compares UCLA SWE (black dotted line) and downscaled SWE (\hat{SWE}) data (blue and green lines) against SNODAS. The \hat{SWE} data, derived from various climate estimators, are identified in the legend by their names and associated colors: light blue for 'ec-earth3-veg', green for 'cnrm-esm2-1', and dark blue for 'mpi-esm1-2'. Within each color group, line styles distinguish the spatial resolutions of the climate data: solid lines indicate climate estimators at a 9 km resolution, while dashed lines represent climate estimators at a 100 km resolution.

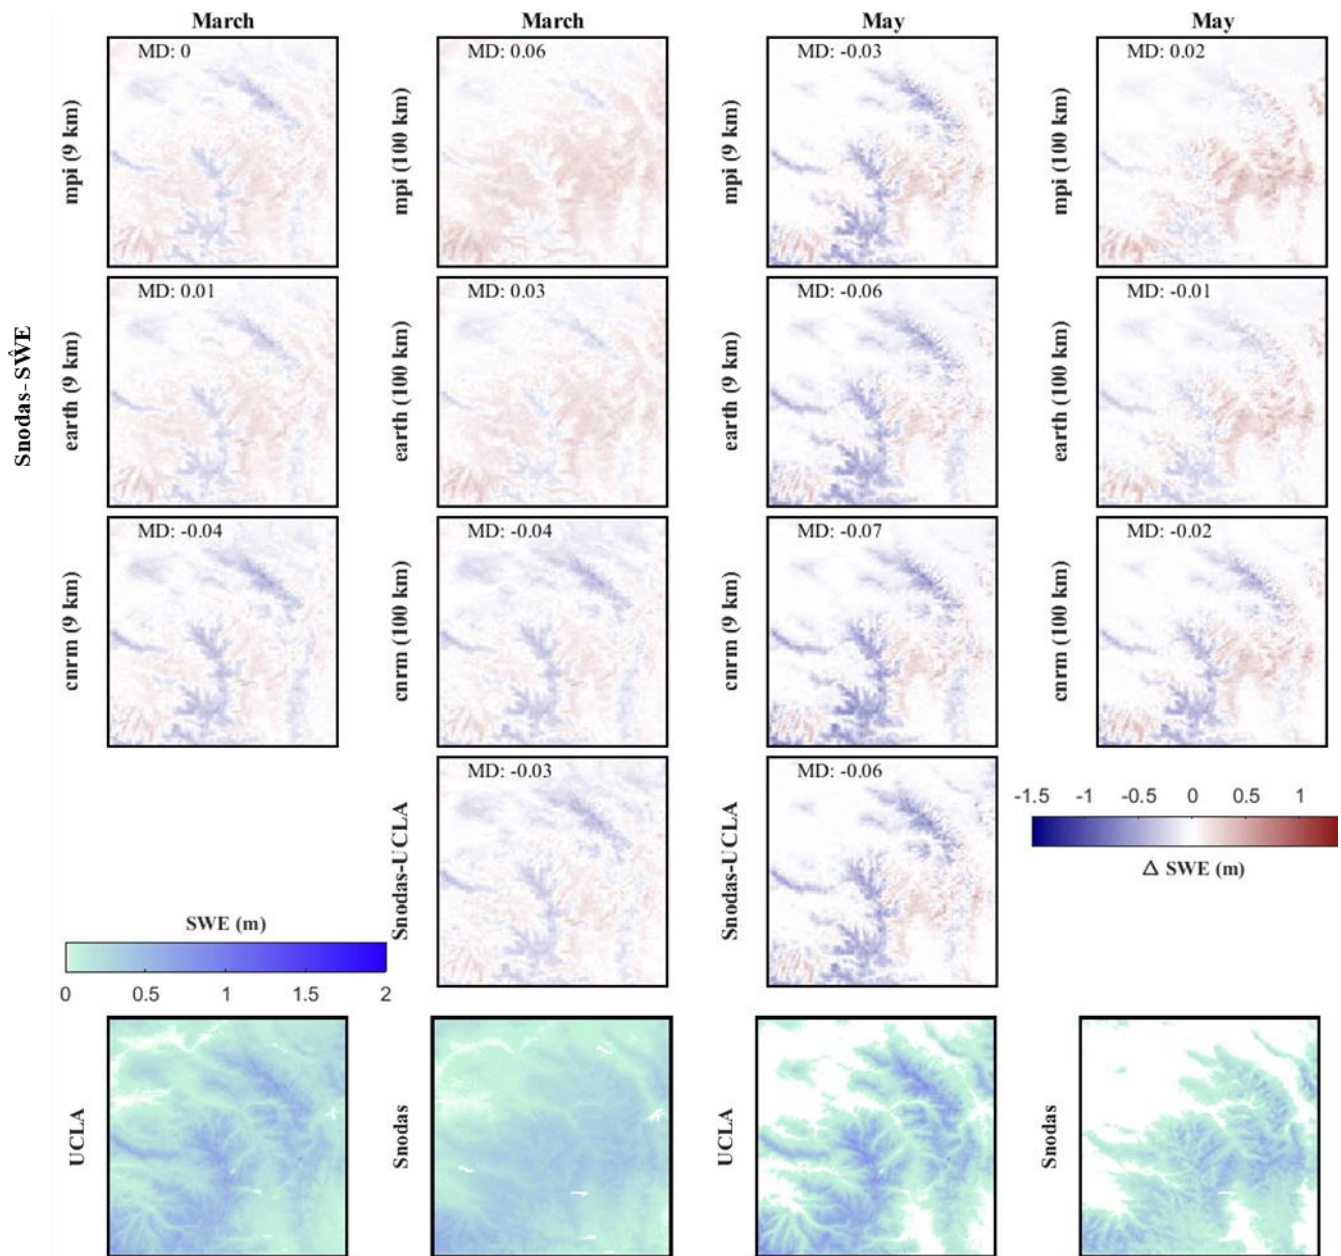

Fig. S12. Comparison with SNODAS data. The first four rows present the average difference between SNODAS and downscaled SWE (S $\hat{W}E$) or UCLA SWE (SNODAS-S $\hat{W}E$ or SNODAS-UCLA) over Colorado for March and May during the 6-year testing period (2005-2010). The last row compares the average UCLA SWE or SNODAS SWE over Colorado for March and May during the same 6-year testing period (2005-2010). The evaluation metric includes Mean Difference (MD).

Table S5. Comparison of downscaled SWE (SWE) or UCLA SWE with 1 km SWE from the Daymet Dataset over California (CA) and Colorado (CO). Metrics displayed include Correlation Coefficient (R), Mean Difference (MD), and Root-Mean-Squared Error (RMSE). Consideration is given only to swe values greater than 1 cm. 'Forest' denotes pixels with forest land cover, and 'NoForest' refers to non-forest pixels. The terms '9 km' and '100 km' indicate the resolutions of the climate data estimators.

Fig. S13. Same as Fig. S11, but for comparison against the Daymet data.

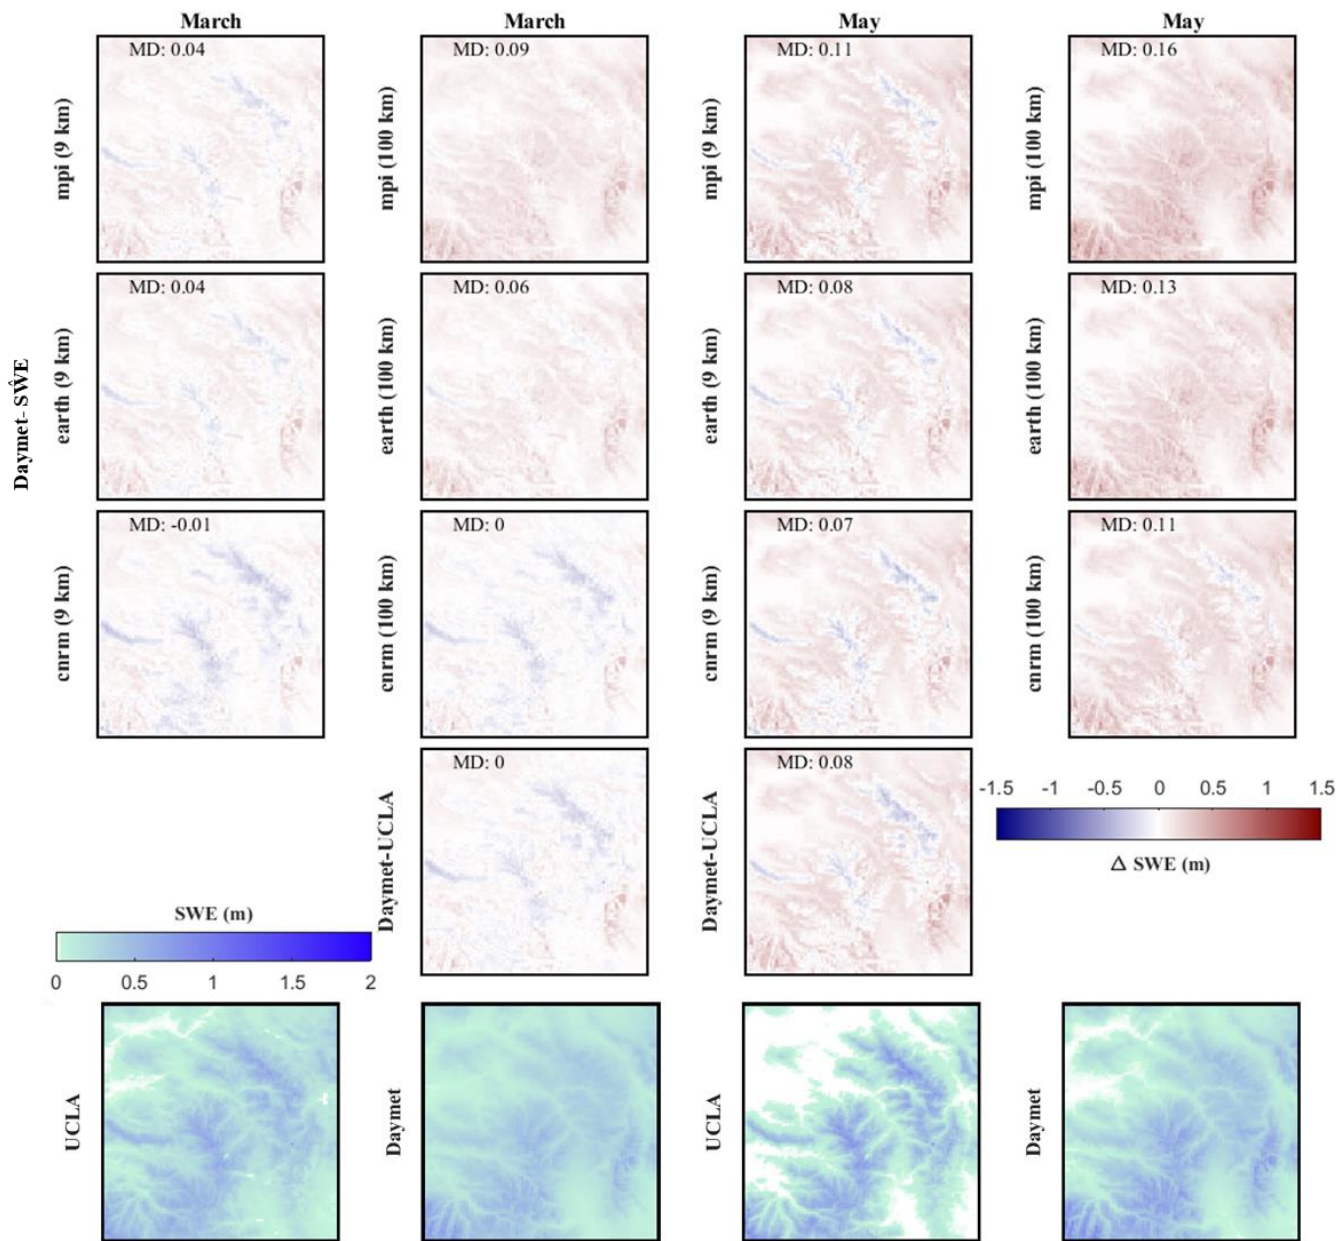

Fig. S14. Same as Fig. S12, but for comparison against the Daymet data.

Table S6. Comparison of downscaled SWE (S \hat{W} E) or UCLA SWE with 4 km SWE from the University of Arizona Dataset over California (CA) and Colorado (CO). Metrics displayed include Correlation Coefficient (R), Mean Difference (MD), and Root-Mean-Squared Error (RMSE). Consideration is given only to swe values greater than 1 cm. 'Forest' denotes pixels with forest land cover, and 'NoForest' refers to non-forest pixels. The terms '9 km' and '100 km' indicate the resolutions of the climate data estimators.
