Table S1: Selected characteristics of all study catchments. Catchment IDs are set by 1) country: CZ – Czechia (including catchments in Germany), CH – Switzerland, 2) mountain region in Czechia and Germany: 100 – Bohemian and Bavarian Forest, 200 – Ore Mountains, 300 – Western Sudetes, 400 – Central Sudetes, 500 – Eastern Sudetes, 600 – Western Carpathians; in Switzerland: 100 – Jura and Swiss Plateau, 200 – Central Alps, 300 – Southern Alps. Catchments (IDs) are ordered with regard to geographical locations from west to east within individual mountain regions. Climate and snow characteristics represent annual means from the 1980-2010 period valid for mean catchment elevation, based on the modeled values.

ID	Catchment	Gauging station	Area [km^2]	Mean elevation (range) [m a.s.l.]	Annual mean air temperature [°C]	Annual precipitation [mm]	Annual snowfall [mm]	Maximum SWE [mm]
CZ-101	Schwarzach	Höll	59.9	652 (494-1042)	7.1	894	140	70
CZ-102	Weisser Regen	Lohberg	39.3	928 (577-1456)	6.2	1238	257	198
CZ-103	Ostruzna	Kolinec	92.0	755 (541-1165)	6.1	892	112	53

Table S2: Mean seasonal (Nov-Apr) modeled values of all climate and snow characteristics (listed in Table 2 in Section 2.6) for individual projections (Section 2.5). This includes seasonal mean air temperature (T_{mean}), sum of all precipitation (P_{sum}), mean snow water equivalent (SWE_{mean}), maximum snow water equivalent (SWE_{max}), sum of snowfall (S_{sum}) and snowfall fraction (S_f).

Projection		Czech and German catchments						Swiss catchments
