28

29

<b>Bin size (Ma):</b>	<b>0.1</b>	<b>0.2</b>	<b>0.5</b>	<b>1.0</b>
<b>Foraminifera</b>	<i>multiplicative</i>	<i>multiplicative</i>	<i>multiplicative</i>	<i>multiplicative</i>
<b>Calcareous Nannofossils</b>	<i>multiplicative</i>	<i>multiplicative</i>	<i>multiplicative</i>	<i>multiplicative</i>
<b>Radiolarians</b>	<i>multiplicative</i>	<i>multiplicative</i>	<i>multiplicative</i>	<i>multiplicative</i>
<b>Diatoms</b>	<i>multiplicative</i>	<i>multiplicative</i>	<i>multiplicative</i>	<i>multiplicative</i>

**Table S2.** The AIC-selected model formula for each group and bin size combination, on data that was processed without the “gap-omission” approach. “*multiplicative*” refers to the model with the formula:  $ex \sim oc * ch * p$ , and “*additive*” refers to the model with the formula:  $ex \sim oc + ch + p$ . “*ex*” represents the binary response variable *extinction*, “*oc*” represents the *occupancy* term, “*ch*” represents the *occupancy change* term, and “*p*” represents three-timer sampling probability.

## Foraminifera

81

82 **Figure S1A.** Number of foraminifera occurrences in each geographic cell. Cells assigned  
83 according to each occurrence's modern geographic coordinates. White areas correspond to  
84 cells without records.  
85

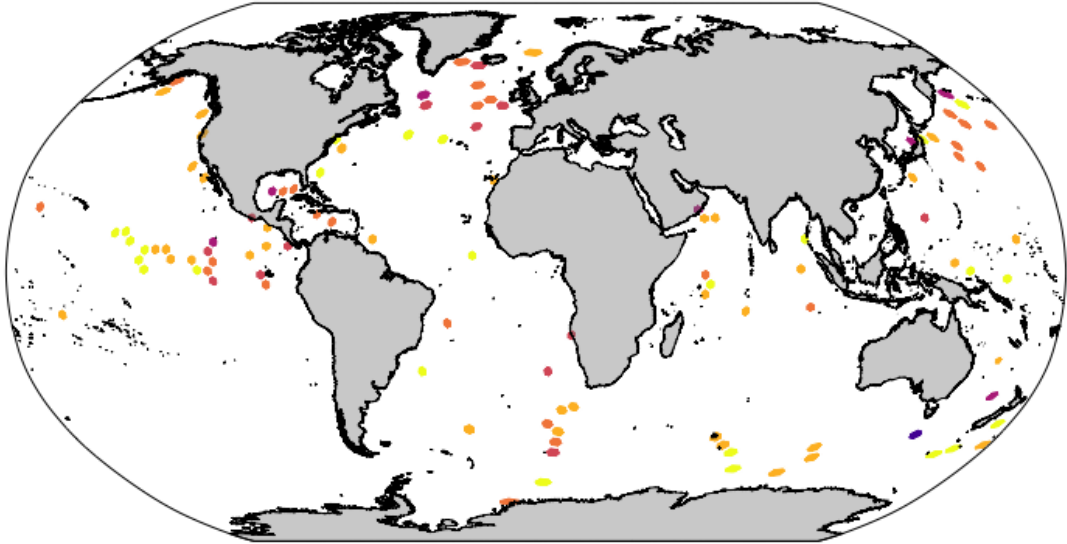

## Calcareous Nannofossils

86

87 **Figure S1B.** Number of calcareous nannofossil occurrences in each geographic cell. Cells  
88 assigned according to each occurrence's modern geographic coordinates. White areas  
89 correspond to cells without records.

# Radiolarians

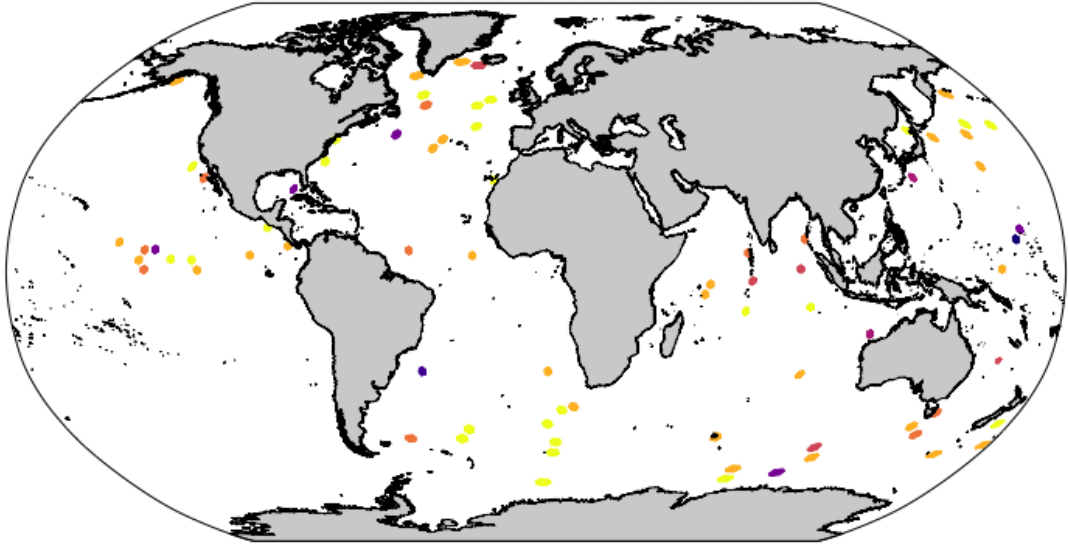

90

91 **Figure S1C.** Number of radiolarian occurrences in each geographic cell. Cells assigned  
92 according to each occurrence's modern geographic coordinates. White areas correspond to  
93 cells without records.  
94

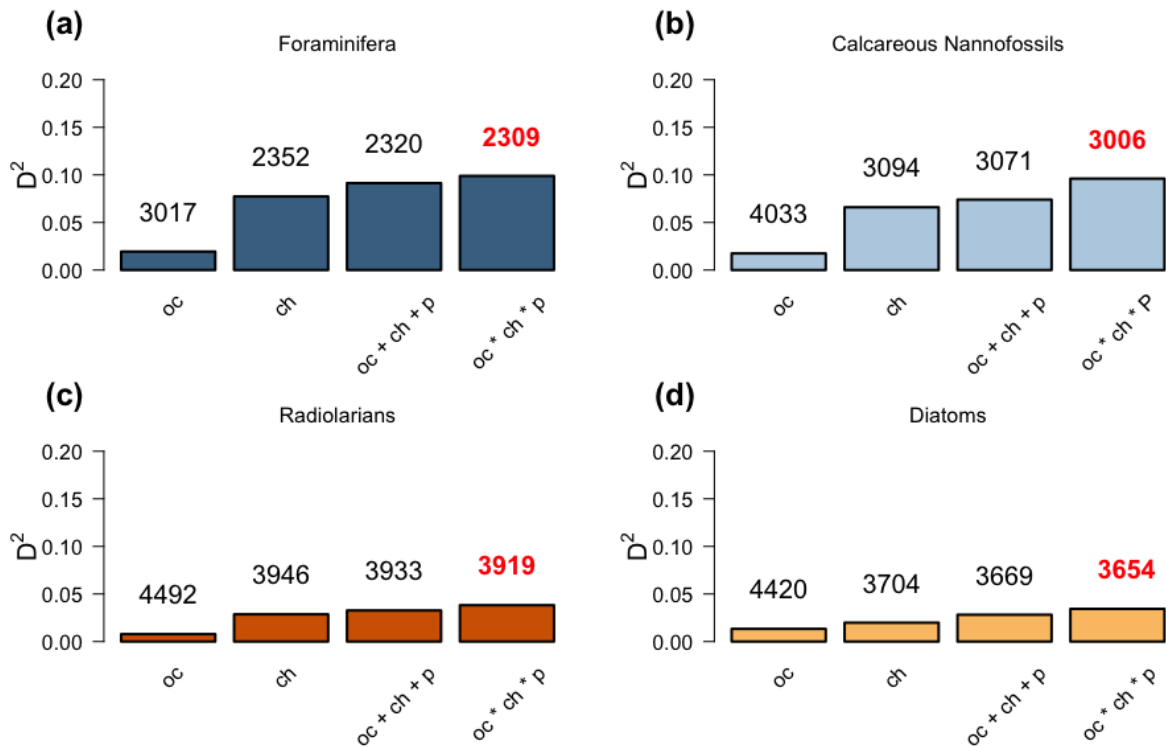

# Diatoms

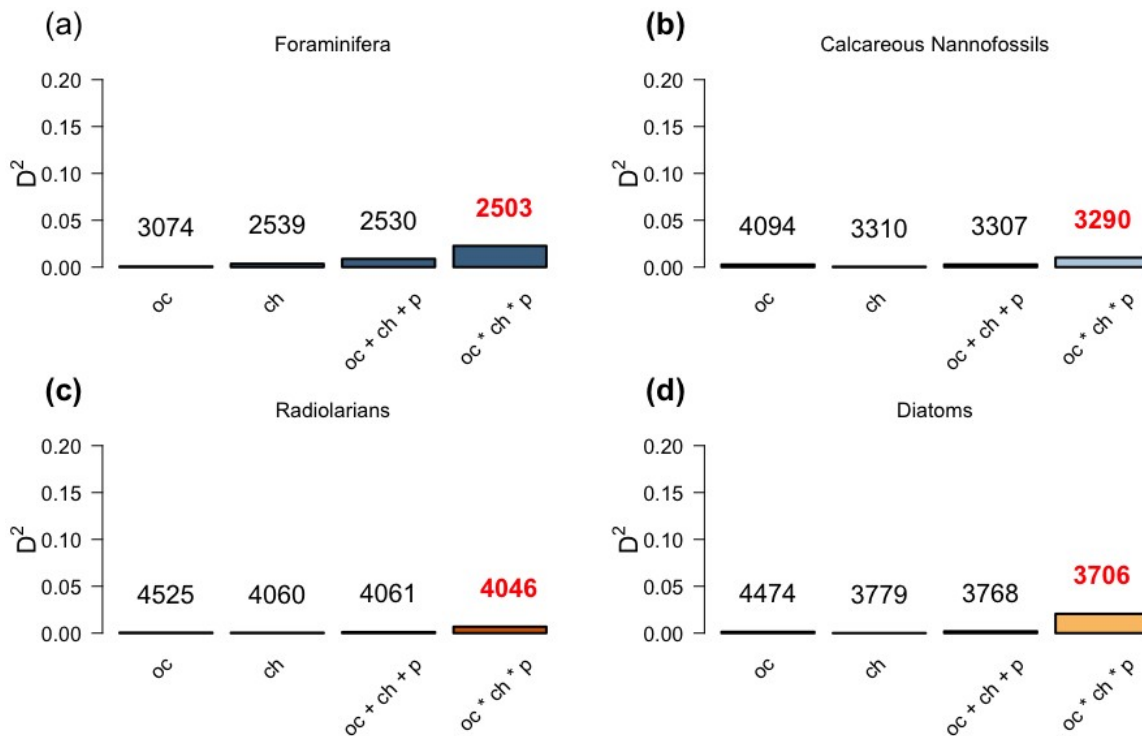

95

96 **Figure S1D.** Number of diatom occurrences in each geographic cell. Cells assigned  
97 according to each occurrence's modern geographic coordinates. White areas correspond to  
98 cells without records.

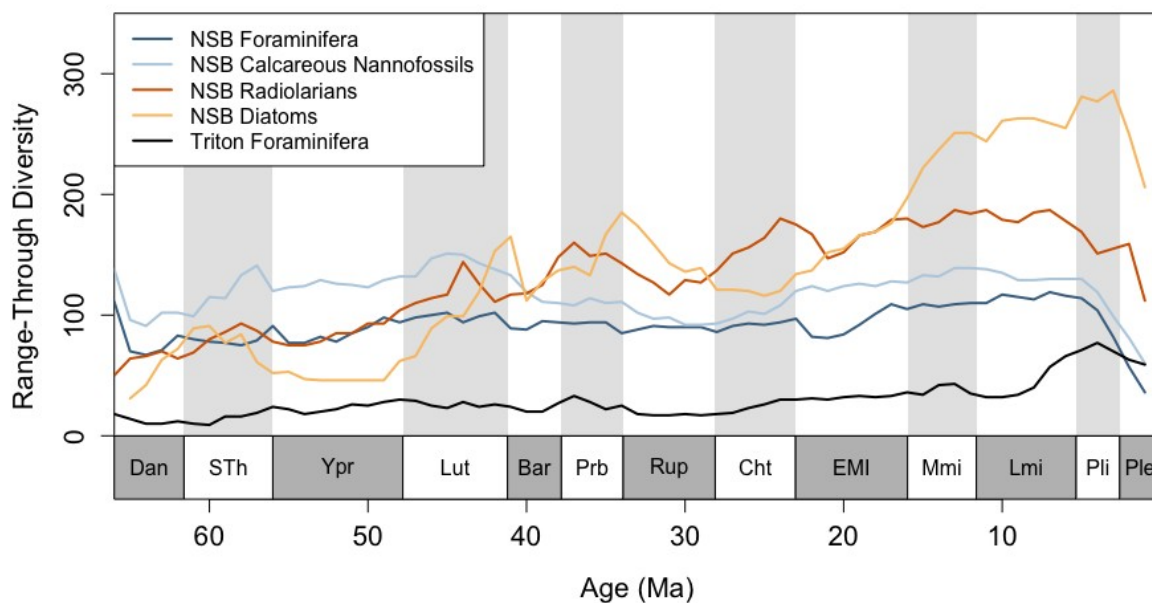

99 **Figure S2.**  $D^2$  values (bars) and AIC values (numbers displayed above each bar) for each  
 100 examined model formula using proportional occupancy of Longhurst provinces and change  
 101 in proportional occupancy of Longhurst provinces. Shown for each of the NSB data sets  
 102 with bin size = 1 million years. The lowest AIC value for each data set is shown in red.  
 103  
 104  
 105

106 **Figure S3.**  $D^2$  values (bars) and AIC values (numbers displayed above each bar) for each  
 107 examined model formula using latitudinal range and change in latitudinal range. Shown for  
 108 each of the NSB data sets with bin size = 1 million years. The lowest AIC value for each  
 109 data set is shown in red.  
 110  
 111

113  
 114 **Figure S4.** Range through diversity for each of the four NSB datasets and the Triton dataset,  
 115 using a bin size of 1.0 million years. Notice how the Triton dataset has consistently lower  
 116 diversity than the other four datasets. Also note the decrease in diversity approaching the  
 117 present, suggesting sampling issues at the tops of drill cores.
