

## Supplementary materials

Supplementary Fig. S1. Venn diagram of shared and non-shared OTUs based on the ST and SH pairs of primers. Comparison of the OTUs composition among two datasets based on the same region (37F).

Supplementary Table S1. Source data based on OTUs with  $\geq 10$  reads in a single sample.

*This is a large Excel file which cannot be provided as a pdf. Prior to publication, this dataset will be stored and made available on a public data repository.*

Supplementary Table S2. Average OTUs and reads percentages (%) for different taxonomic groups and sediment types, shown for standard (ST) and short (SH) primer pairs, n – number of samples. Counted on OTUs with  $\geq 10$  reads in a single sample.

Sediment type	n	Planktonics		Rotaliida		Textulariida		Tubothalamea		Monothalamea		Unassigned	
		OTUs	Reads	OTUs	Reads	OTUs	Reads	OTUs	Reads	OTUs	Reads	OTUs	Reads

Supplementary Table S3. List of foraminiferal taxa identified in different environmental settings by the ST and SH molecular barcodes, and by micropaleontological analysis according to Majewski et al. (2020). Bolded pluses in ST and SH columns indicate species assigned to database with  $\leq 99\%$  of similarity. OTUs with less than 10 reads in a single sample are removed.

\* Doubtfull taxonomic interpretation. Taxa not present in the Ross Sea.
