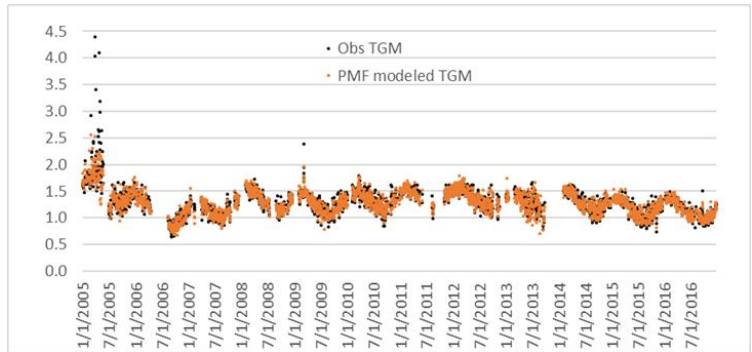

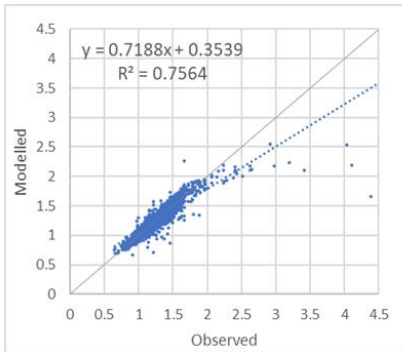

Figure S1: Comparison of PMF modelled and observed 24-h TGM using regression analysis (left) and time-series analysis (right)

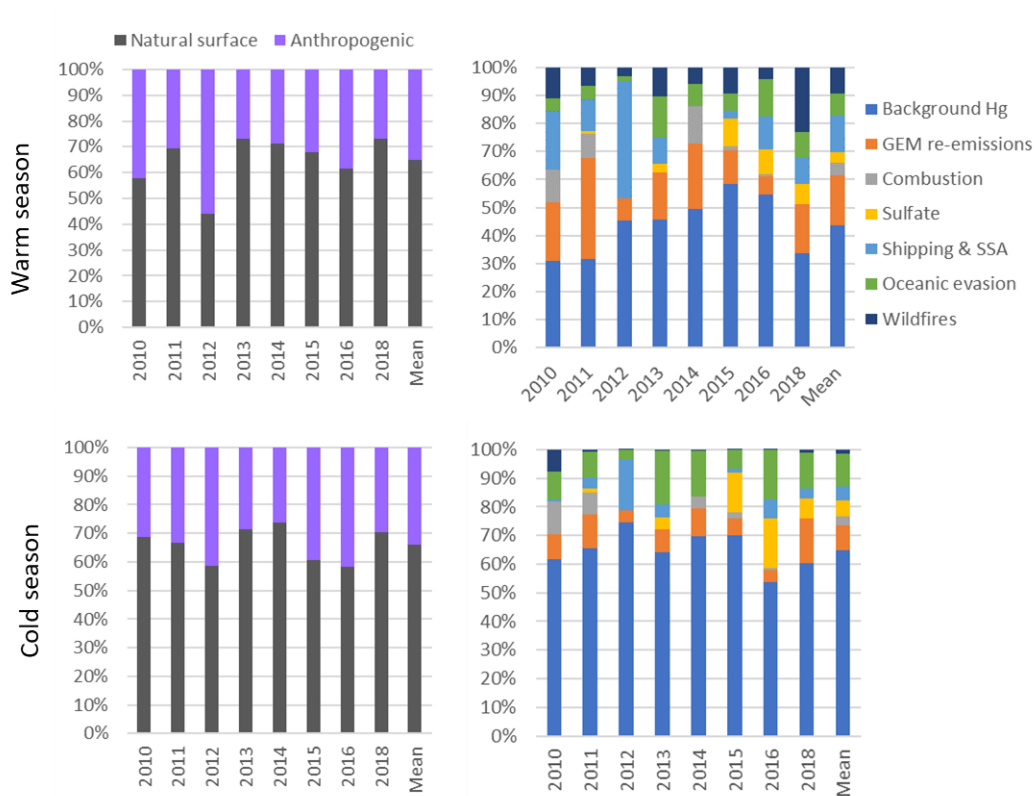

Figure S2: Relative source contributions to warm and cold season mean TGM at SAT. Mean applies to the 2010-2018 period except 2017. Warm season: May to Oct; cold season: Nov to Apr. Natural surface emissions comprise wildfires, GEM re-emissions, oceanic evasion, and natural surface emissions contributing to background Hg. Anthropogenic emissions comprise local combustion, sulfate, and anthropogenic emissions contributing to background Hg.

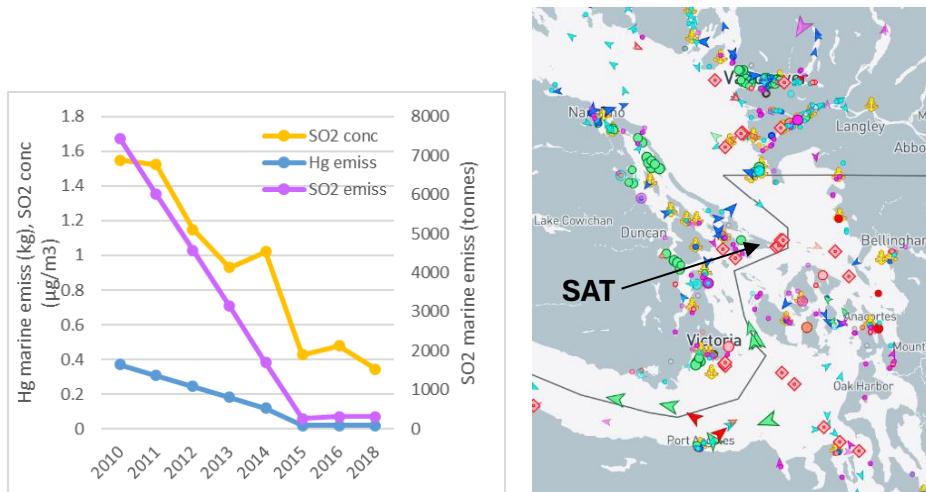

Figure S3: Left - Annual emissions of SO₂ and Hg from marine transportation reported for British Columbia (ECCC APEI, 2023). SO₂ ambient concentrations measured at SAT are also plotted. Right – Symbols represent ship traffic along the Strait of Georgia (http://www.shiptraffic.net/marine-traffic/straits/Strait_of_Georgia).

Figure S4: Hg emission sources within 150 km of SAT. Left: Washington State emissions (USEPA TRI, 2023); right: British Columbia emissions (ECCC NPRI, 2023)

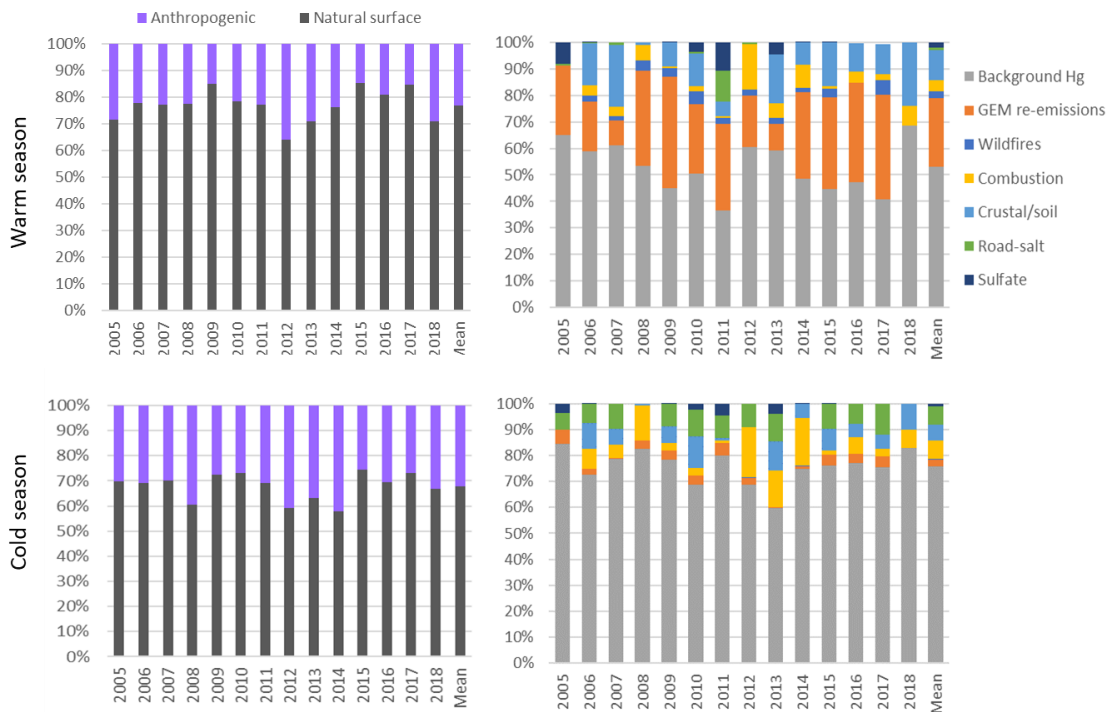

Figure S5: Relative source contributions to warm and cold season mean TGM at EGB. Mean applies to the 2005-2018 period. Warm season: May to Oct; cold season: Nov to Apr. Natural surface emissions comprise wildfires, GEM re-emissions, crustal/soil dust, road salt, and natural surface emissions contributing to background Hg. Anthropogenic emissions comprise local combustion, sulfate, and anthropogenic emissions contributing to background Hg.

Figure S6: Hg emission sources within 150 km of EGB in Province of Ontario (ECCC NPRI, 2023)

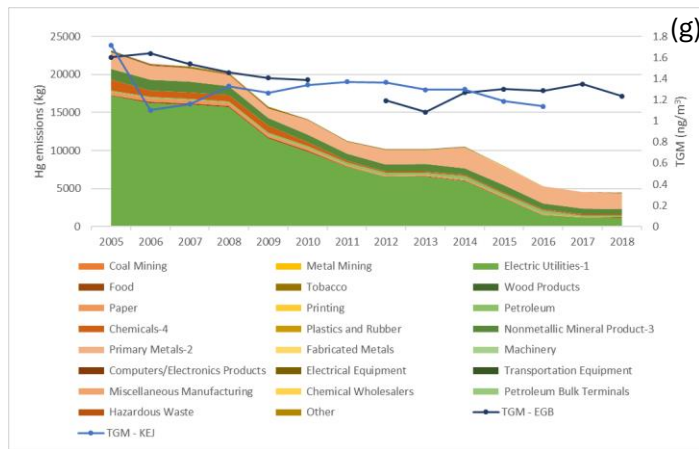

Figure S7: Regional Hg emission sources around SAT, EGB and KEJ. Emissions data for (a) British Columbia, (b) Northwestern U.S., (c) Ontario, (d) Quebec, (e) Nova Scotia, (f) New Brunswick, (g) Northeastern and midwestern U.S. Data sources: ECCC APEI (2023) for Canadian emissions, USEPA TRI (2023) for U.S. emissions.

Figure S8: Relative source contributions to warm and cold season mean TGM at KEJ. Mean applies to the 2005-2016 period. Warm season: May to Oct; cold season: Nov to Apr. Natural surface emissions comprise wildfires, GEM re-emissions, oceanic evasion, and natural surface emissions contributing to background Hg. Anthropogenic emissions comprise local combustion, sulfate, regional emissions and sea-salt processing, and anthropogenic emissions contributing to background Hg.

Figure S9: SO₂ emissions (a) local, within 150 km of KEJ (ECCC NPRI, 2023) and (b) regional, U.S. northeast and Midwest regions (USEPA NEI, 2023)

Figure S10: Hg emission sources within 150 km of KEJ in Provinces of Nova Scotia and New Brunswick (ECCC NPRI, 2023)
