

Dear Stephen Livingstone,

Thank you for serving as editor for this article. As for the technical correction to Line 33, we decided to omit the sentence and slightly re-phrase the preceding/following sentence. The paragraph now reads (starting in Line 31):

*“Storstrømmen and L. Bistrup are currently in a quiescent phase, with both glaciers exhibiting low average flow speeds and limited seasonal fluctuations in comparison to other marine-terminating glaciers in Greenland. For both glaciers, ice is nearly stationary (average flow < 20 m/y) in the last 30-50 km before the ice front, with increasing flow speeds (50 - 200 m/y) further upstream (Figure 1a).”*
