RiverBedDynamics v1.0: A Landlab component for computing two-dimensional sediment transport and river bed evolution

By: Angel D. Monsalve, Samuel R. Anderson, Nicole M. Gasparini, Elowyn M. Yager

Dear editor

We are extremely happy about the recent news we received about our paper egusphere-2024-3390 Title: RiverBedDynamics v1.0: A Landlab component for computing two-dimensional sediment transport and river bed evolution, being accepted for publication in the EGU journal **Geoscientific Model Development**.

In this version we did not edit nor changed any content in the manuscript, except we updated the reference manager style (we use Zotero) to that of Copernicus and made sure that all references are properly listed in the reference section. We also made sure that the style is consistent throughout the paper and there were no articles with capital letter in each word.
