Table S3. Coccolith length measurements used to estimate specific PIC_{Cocco} quotas.

Species or genus	Length (µm)	Volume (µm ³)	Mass (pg)	Coccoliths measured
<i>Gephyrocapsa parvula</i>	2.0 ± 0.1	0.4	1.0	6
<i>Gephyrocapsa huxleyi</i>	3.6 ± 0.3	0.9	2.5	20
<i>Gephyrocapsa oceanica</i>	5.2 ± 0.6	6.9	18.7	20
<i>Helicosphaera</i> spp.	9.0 ± 1.1	36.9	99.7	20
<i>Oolithotus</i> spp.	4.5 ± 0.4	6.2	16.8	20
<i>C. leptoporus</i> large-type	8.1 ± 0.9	41.9	113.0	20
<i>C. leptoporus</i> small-type	3.9 ± 0.4	4.7	12.6	11
<i>Syracosphaera</i> spp.	3.7 ± 0.2	0.8	2.0	2
<i>Acanthoica</i> spp.	4.0 ± 0.3	1.9	5.2	5
<i>Discosphaera tubifera</i>	1.6 ± 0.1	0.3	0.8	2
<i>Umbellosphaera</i> spp.	5.7 ± 0.6	2.7	7.4	7
<i>Umbilicosphaera</i> spp.	4.7 ± 0.6	5.1	13.9	7

10 Supplementary Section S2. Figures

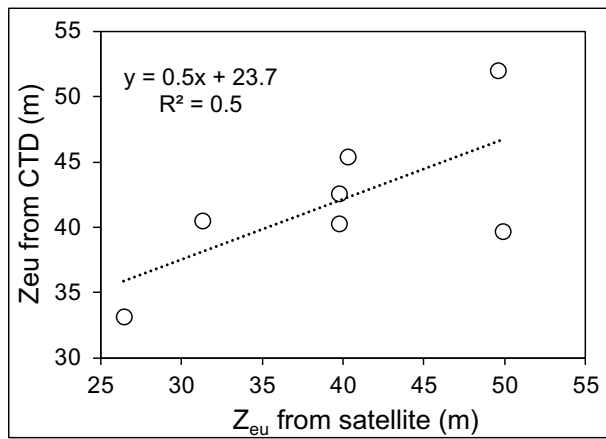

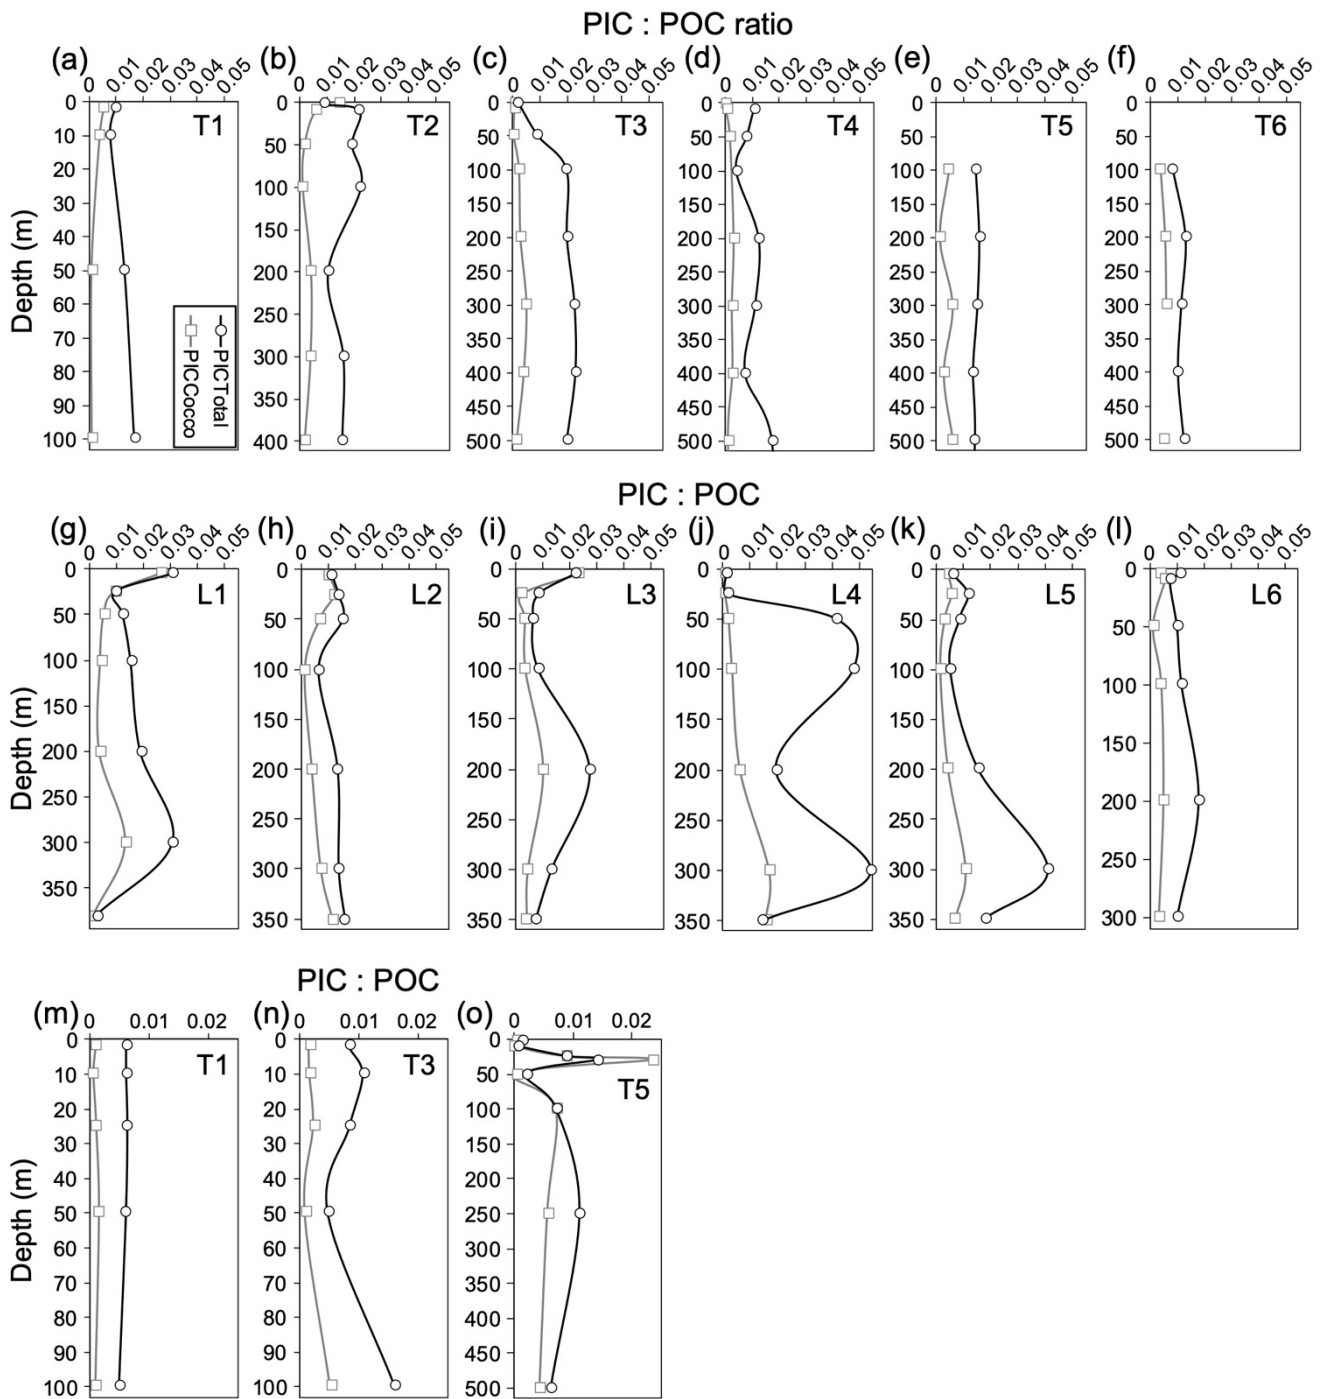

Figure S1. Comparison between euphotic depth derived from satellite observations and from PAR obtained with a sensor attached to the CTD.

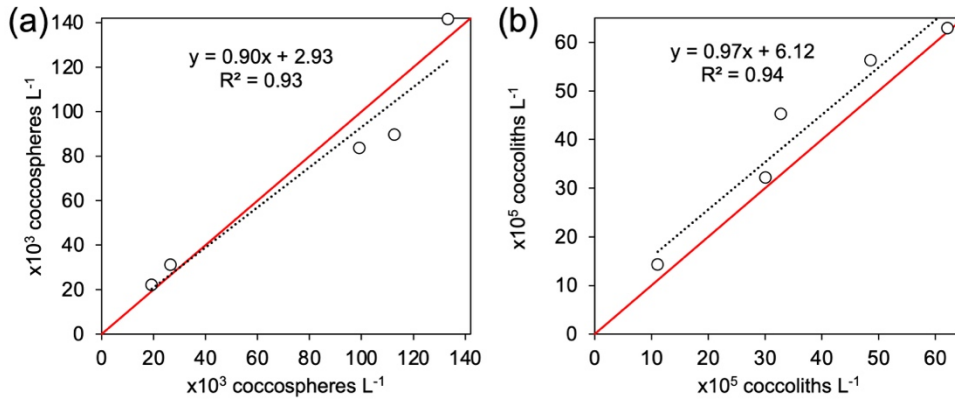

15

Figure S2. Profiles of PIC:POC ratios built with PIC_{Total} and PIC_{Cocco} data across the inshore-offshore (profiles a-f) and latitudinal legs (profiles g-l) sampled during late-spring 2015, as well across the inshore-offshore leg (profiles m-o) sampled during mid-summer 2018.

20 **Figure S3.** Zoom of scanning electron microscopy images showing layers of coccoliths detached from *G. huxleyi* (a-c), as well as, collapsed coccospheres with distinct brightness (d-h).

25 **Figure S4.** Linear relationship for coccospheres (a) and detached coccoliths counts (b) obtained through cross-polarized light microscopy and SEM examination methods. The red line indicates 1:1 ratio, whereas the dotted curve depicts the empirical trend.

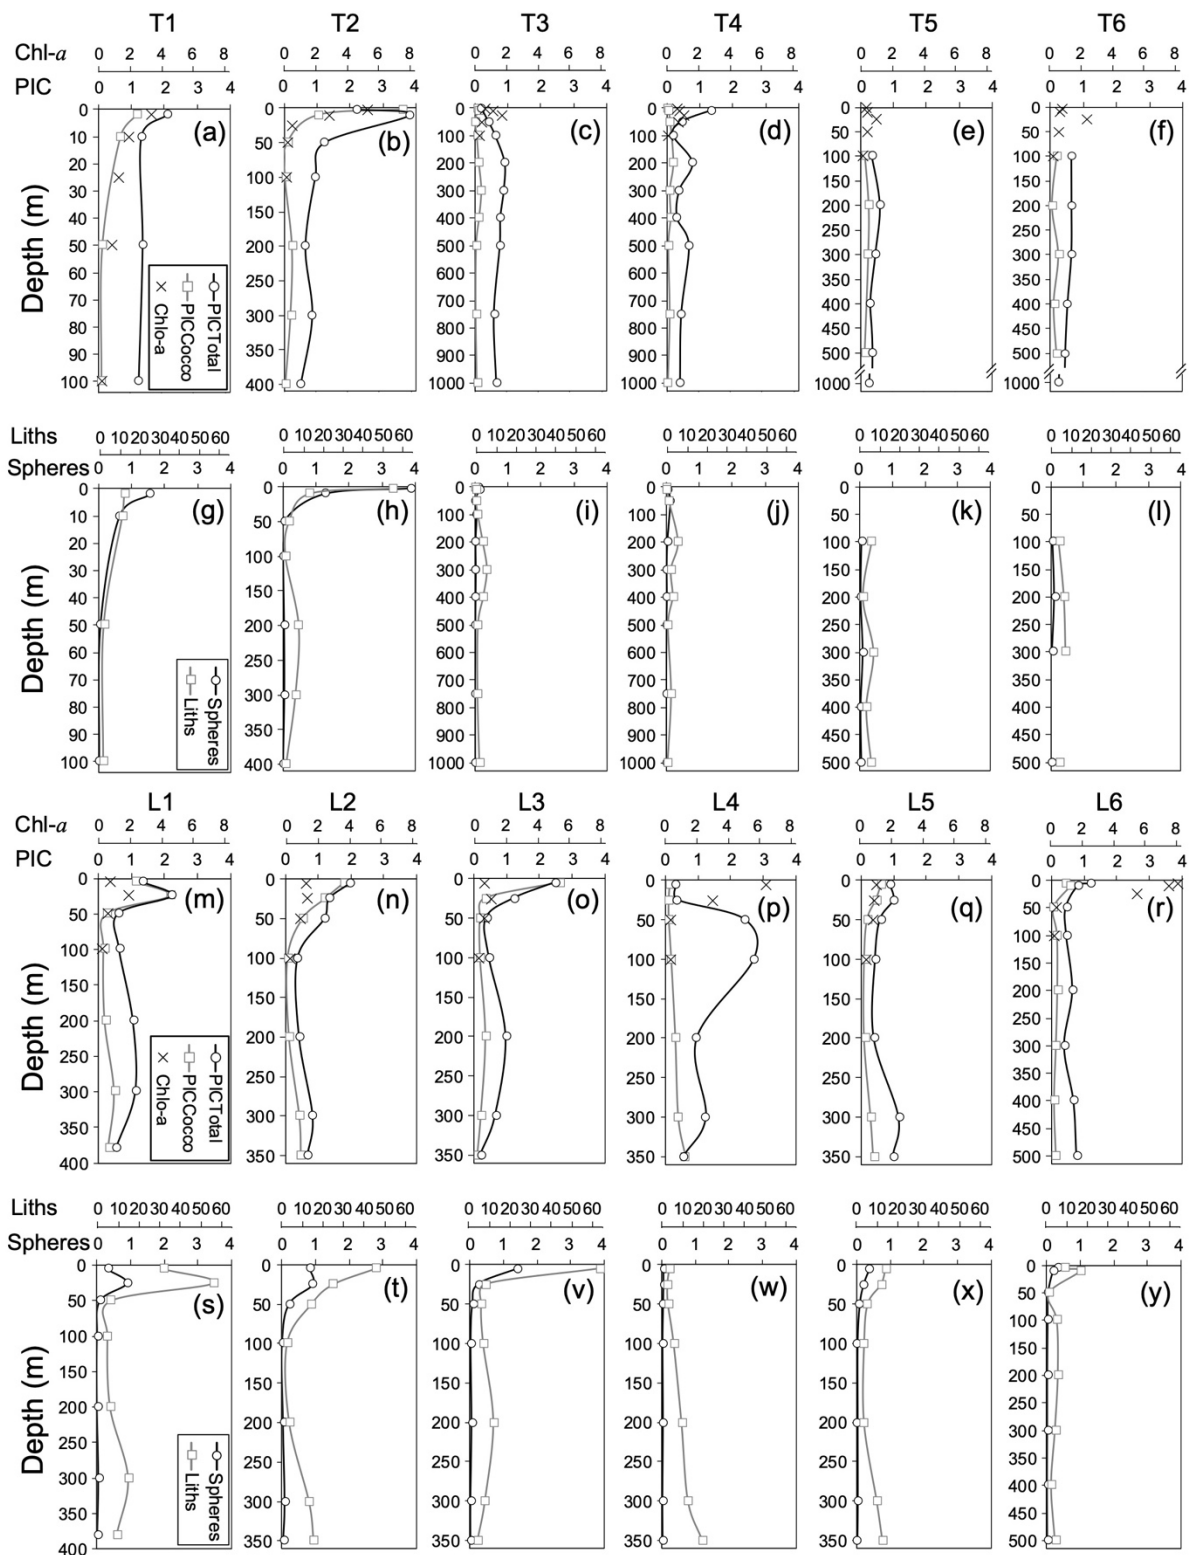

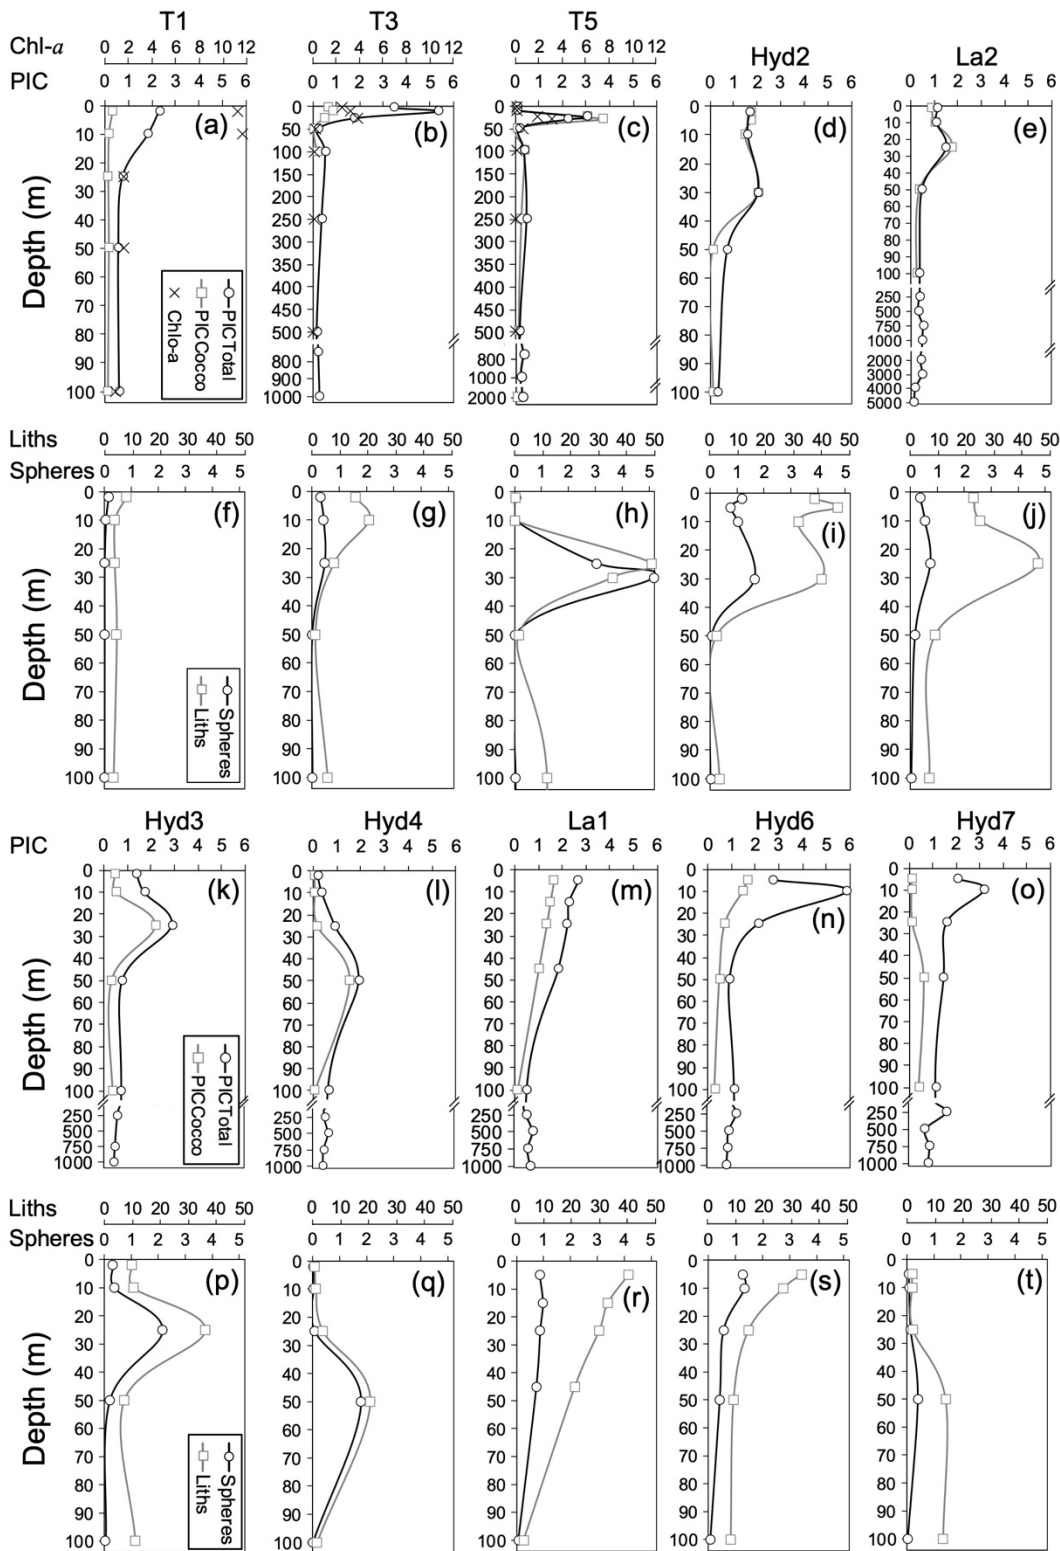

Figure S5. PIC_{Total}, PIC_{Cocco}, Chl-a, coccospheres, and detached-coccolith profiles across the inshore-offshore (profiles a-l) and latitudinal legs (profiles m-y) sampled during the late-spring 2015. Note each variables axes span the same range.

30 **Figure S6.** $\text{PIC}_{\text{Total}}$, $\text{PIC}_{\text{Coccos}}$, Chl-a, coccospheres, and detached-coccolith profiles across the inshore-offshore (profiles a-c and f-h) and latitudinal legs (profiles d-e and i-t) sampled during the mid-summer 2018. Note each variables axes span the same range.

35 **Figure S7.** Variation in nitrate vs pCO_2 (a), pH (b) and oxygen (c), along with variation in oxygen vs pCO_2 (d), pH (e), and Ω calcite (f), plus pCO_2 vs pH (g), Ω calcite (h), and carbonate ion (i) recorded within 100-m depth during late-spring 2015 (open black dots) and mid-summer 2018 (open red dots). Gray line depicts the least-square model fit curve.

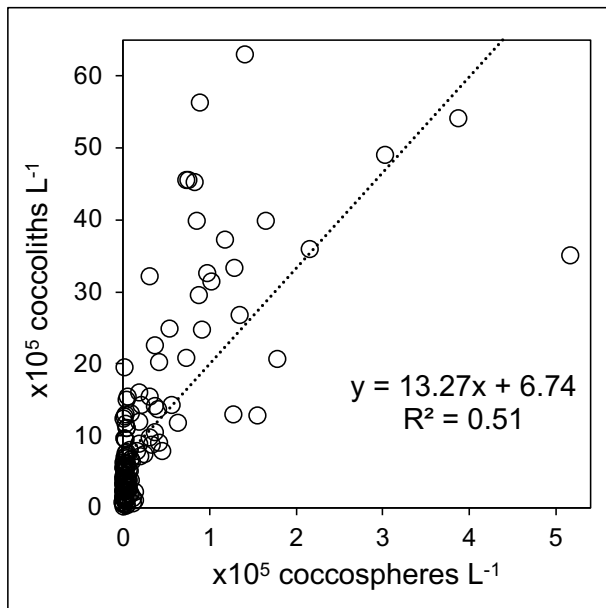

Figure S8. Linear relationship between coccospheres vs detached coccoliths recorded during late-spring 2015 and mid-summer 2018.

40

Figure S9. Chl-*a* versus POC and PIC_{Total} versus POC data variation.

Figure S10. Scanning electron microscopy showing diverse coccolithophore and diatom assemblages in 2015 station T1 at 2 m depth (a) as well the dominance of coccospheres and detached-coccoliths of *G. huxleyi* during post-bloom of diatoms in 2015 station L2 at 5 m depth (b) and under low biomass conditions in 2015 station L3 at 5 m depth (c). Each 800x frame corresponds to 0.2 mm².

50 **Figure S11. Cross-polarized light microscopy showing coccospheres and detached coccoliths of *G. huxleyi* dominating during mid-summer 2018. Images corresponding to: (a) Station Hyd3 at 25 m depth, (b) Station Hyd4 at 50 m depth, (c and d) Station Hyd6 at 10 m depth different focus, (e and f) Station Lander1 (La1) at 15 m depth with distinct focus, (g) Station T5 at 30 m depth, and (h) Station T5 at 30 m depth. Note the white arrows in (d) and (f) indicate some detached coccoliths, and red arrow in (d) a layer of coccoliths included in detached-coccoliths counts. All images taken at 630x magnification.**

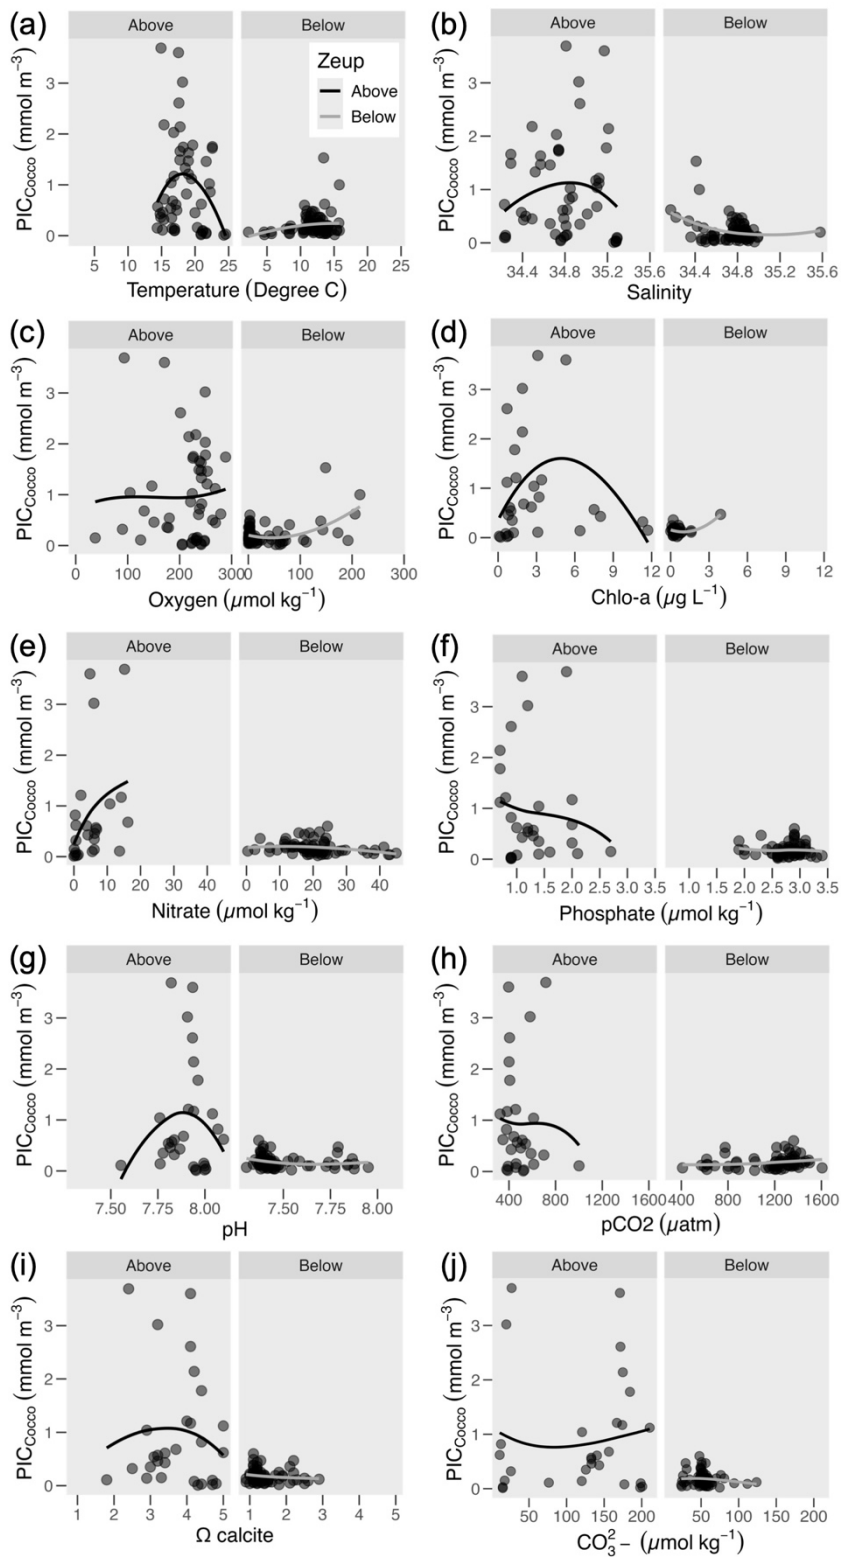

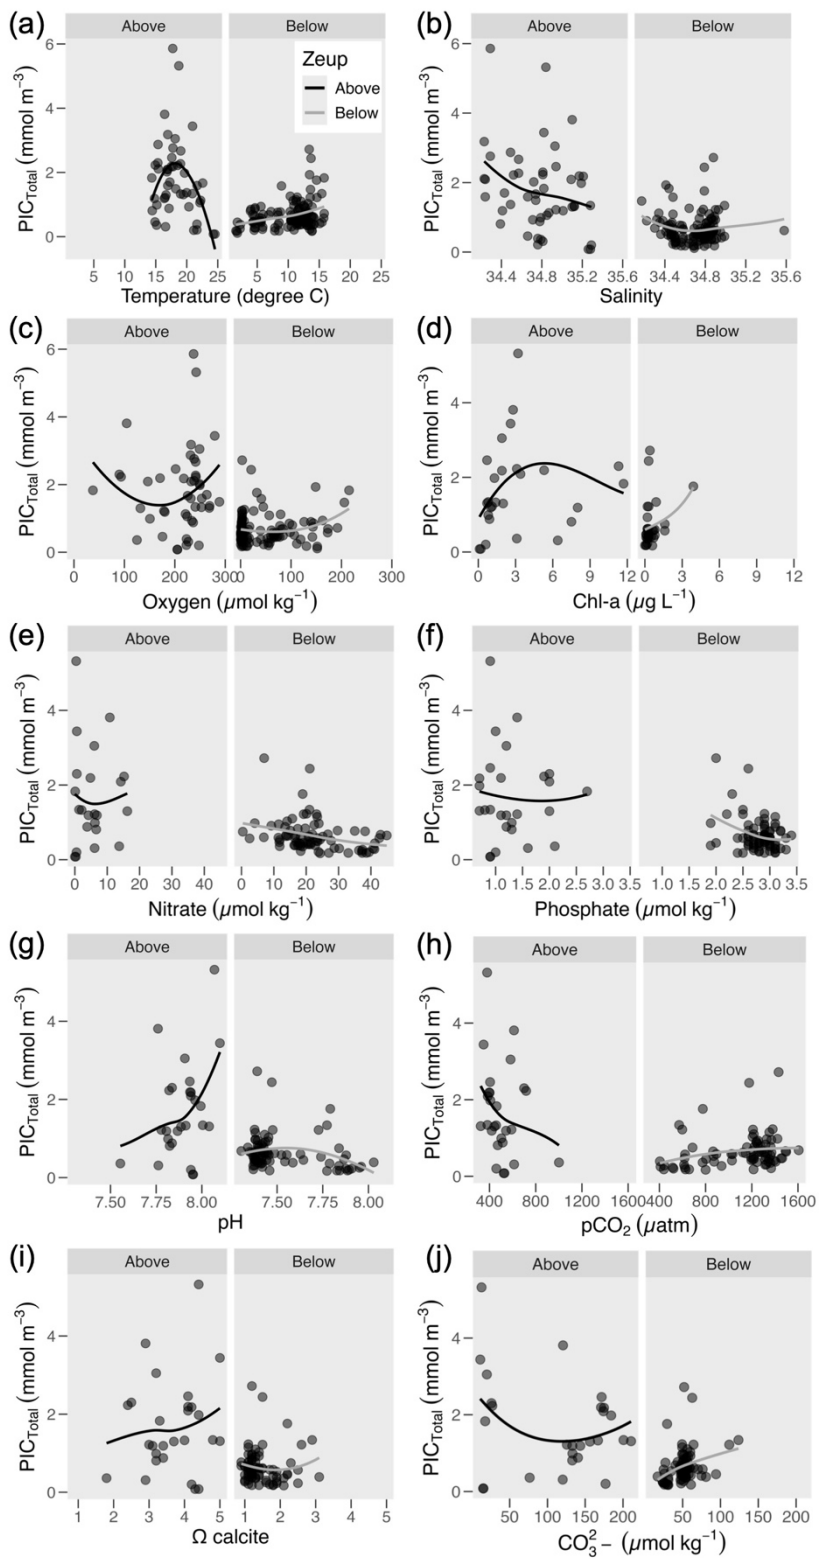

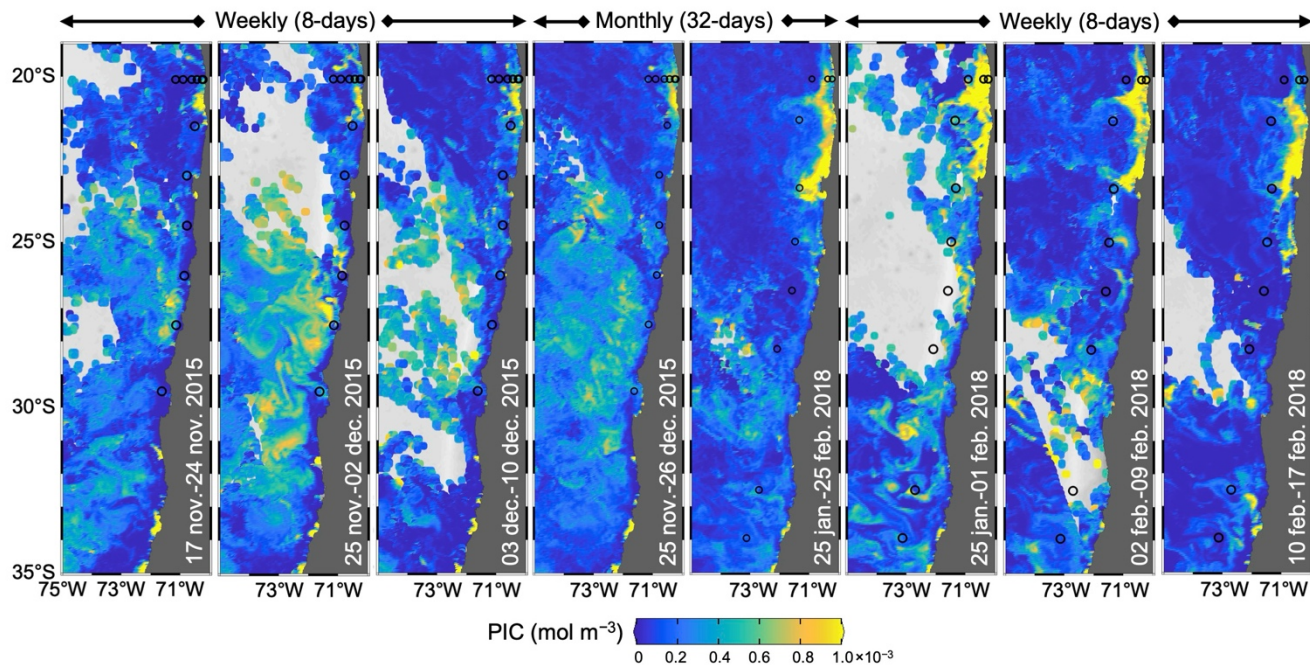

Figure S12. Above and below euphotic depth variation in $\text{PIC}_{\text{Cocco}}$ across environmental conditions during late-spring 2015 and mid-summer 2018. Temperature (a), Salinity (b), oxygen (c), Chl-*a* (d), nitrate (e), phosphate (f), pH (g), $p\text{CO}_2$ (h), Ω calcite (i), and carbonate ion (j) are shown.

60 **Figure S13.** Above and below euphotic depth variation in PIC_{Total} across environmental conditions during late-spring 2015 and mid-summer 2018. Temperature (a), Salinity (b), oxygen (c), Chl-*a* (d), nitrate (e), phosphate (f), pH (g), pCO_2 (h), Ω calcite (i), and carbonate ion (j) are shown.

65

Figure S14. Weekly and monthly satellite-PIC climatologies during the LowpHOX 1 (27-28 nov./05-09 dec. 2015; open circles) and LowpHOX 2 sampling (30 ene./03-09 feb./12-13 feb. 2018; open circles).
