 3 the ModelE2-YIBs model.

5 **Fig. S2.** Evaluation of the summertime (June-August) meteorological field in 2010s
 6 simulated by the ModelE2-YIBs model. Surface temperature (top) and precipitation
 7 (bottom) from the simulation 10NO3 (left) and reanalysis data (middle) are compared.
 8 The correlation coefficients (r), normalized mean bias (NMB), and number of grid cells
 9 (n) for the comparisons are calculated between the simulations and observations are
 10 listed on the scatter panels.

12 **Fig. S3.** Changes in 7 types (a-g) summer PM_{2.5} (without silts) and their sum (h) in
 13 2010s in the model by ozone-vegetation interactions. Results shown are the differences
 14 of PM_{2.5} between 10HO3 and 10NO3. Only the significant changes ($p < 0.05$) are
 15 presented.

16

17 **Fig. S4.** Changes in 6 types (a-f) summer aerosol optical depth (AOD) and their sum
 18 (g) in 2010s in the model by O₃-vegetation interactions. Results shown are the
 19 differences of AOD between 10HO₃ and 10NO₃. Only the significant changes ($p <$
 20 0.05) are presented.
