

Review of “In-cloud characteristics observed in US Northeast and Midwest non-orographic winter storms with implications for ice particle mass growth and residence time”, by Allen and coauthors, egusphere-2024-3808

The authors have addressed the reviewer comments well and have made the relevant changes to the manuscript. After having read the revised manuscript, I believe it is in excellent shape and will be a significant contribution to the scientific knowledge of ice particle formation and growth in such storms. I look forward to seeing this manuscript published.
