

Supplementary

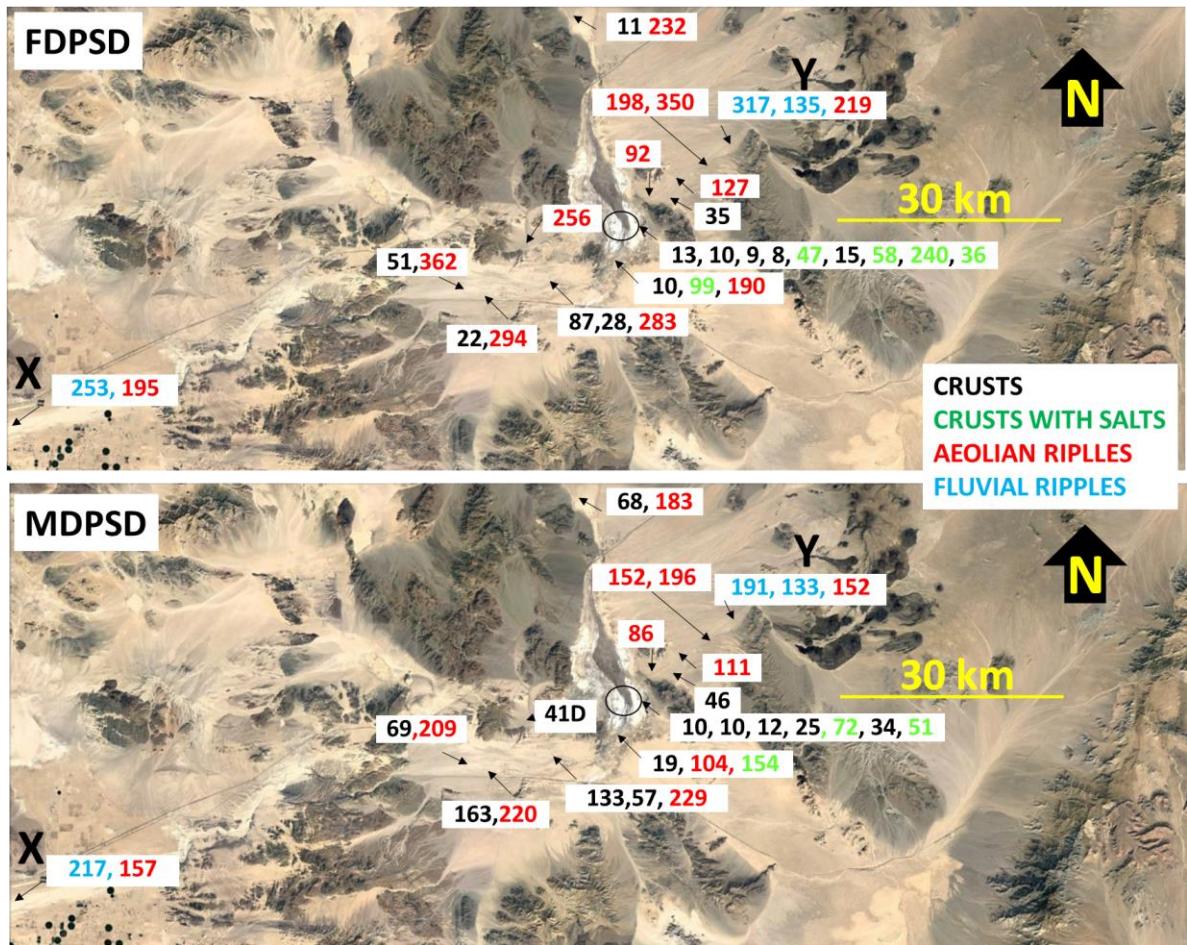

Figure S1: Soda Lake basin scale map with median particle diameter analysed with fully dispersed methodology (upper panel) and minimally dispersed methodology (lower panel) of different type of samples. Basemap: Imagery data from © Google Earth Pro v: 7.3.6.9345.

Table S1. Mean particle diameter from the samples of the Mojave Desert. Nº indicates the number of the sample, Lat. is the latitude, Long. is the longitude. Type is the type of the sample being C: Crust and R: Ripple. Basin indicates the basin name where sample was obtained from. MDP PSD is the minimally dispersed particle size distribution and FD PSD is the Fully dispersed particle size distribution.

Table S3. Summarised results of the Fe mode of occurrence from Mojave Desert samples. Nº is the sample number, FeT is the total Fe content in weight %, FeA is the exchangeable Fe and nano Fe oxides in weight %, FeD is the Fe in hematite and goethite in weight %, FeM is the Fe in magnetite in weight %, FeS is the Fe in Fe bearing minerals in weight %. The FeA %, FeD %, FeM %, FeS % are the percentage of Fe that is in that mode of occurrence according to the total Fe amount.
