

Supplementary Information for Modelling the Fate of Mercury Emissions from Artisanal and Small Scale Gold Mining

Ian M. Hedegcock, Francesco De Simone, Francesco Carbone, and Nicola Pirrone

CNR-Institute of Atmospheric Pollution Research, 87036 Rende, Italy

Correspondence: Ian M. Hedegcock (ian.hedegcock@iia.cnr.it)

S1 Emission domain relief

Figure S1. Emissions and relief of the South-East Asian Domains, emissions in $\text{mol km}^{-2} \text{hr}^{-1}$

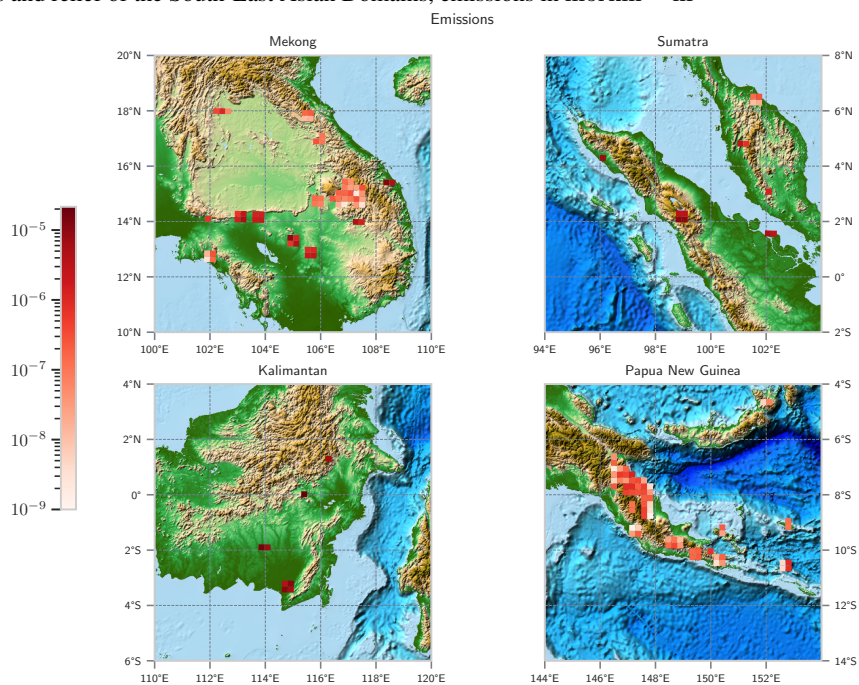

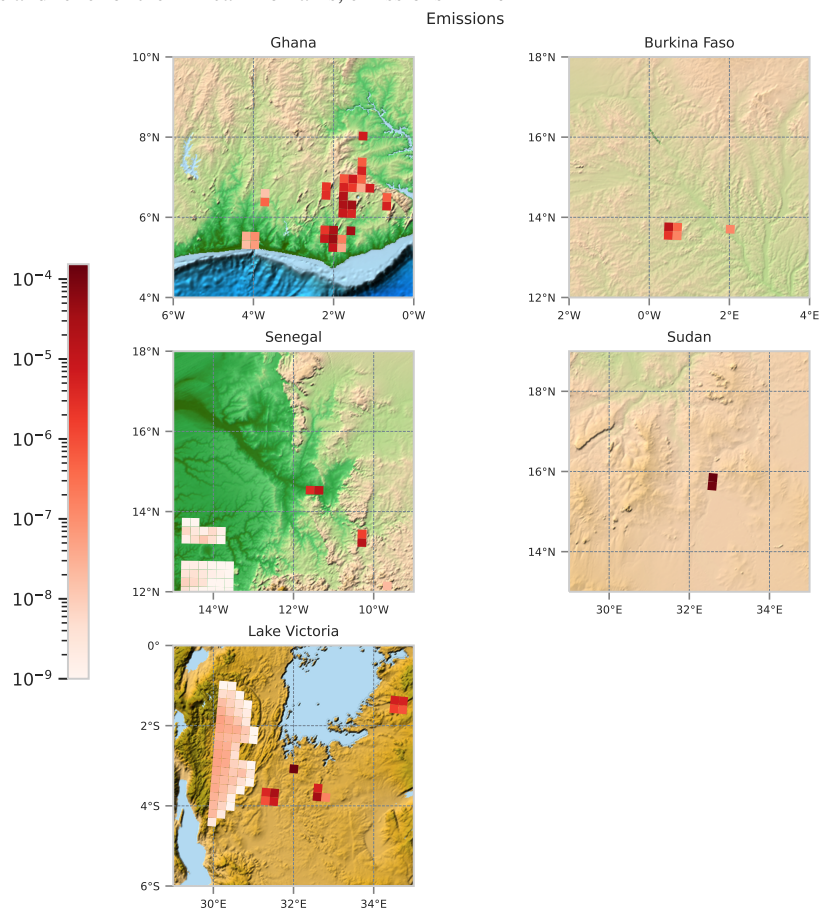

Figure S2. Emissions and relief of the African Domains, emissions in $\text{mol km}^{-2} \text{hr}^{-1}$

S2 Land-Sea Deposition Distance plots

Figure S3. Normalised Hg Deposition vs. distance from emission source for the South American domains. The left colour bar represents deposition to land, the right to seas and oceans

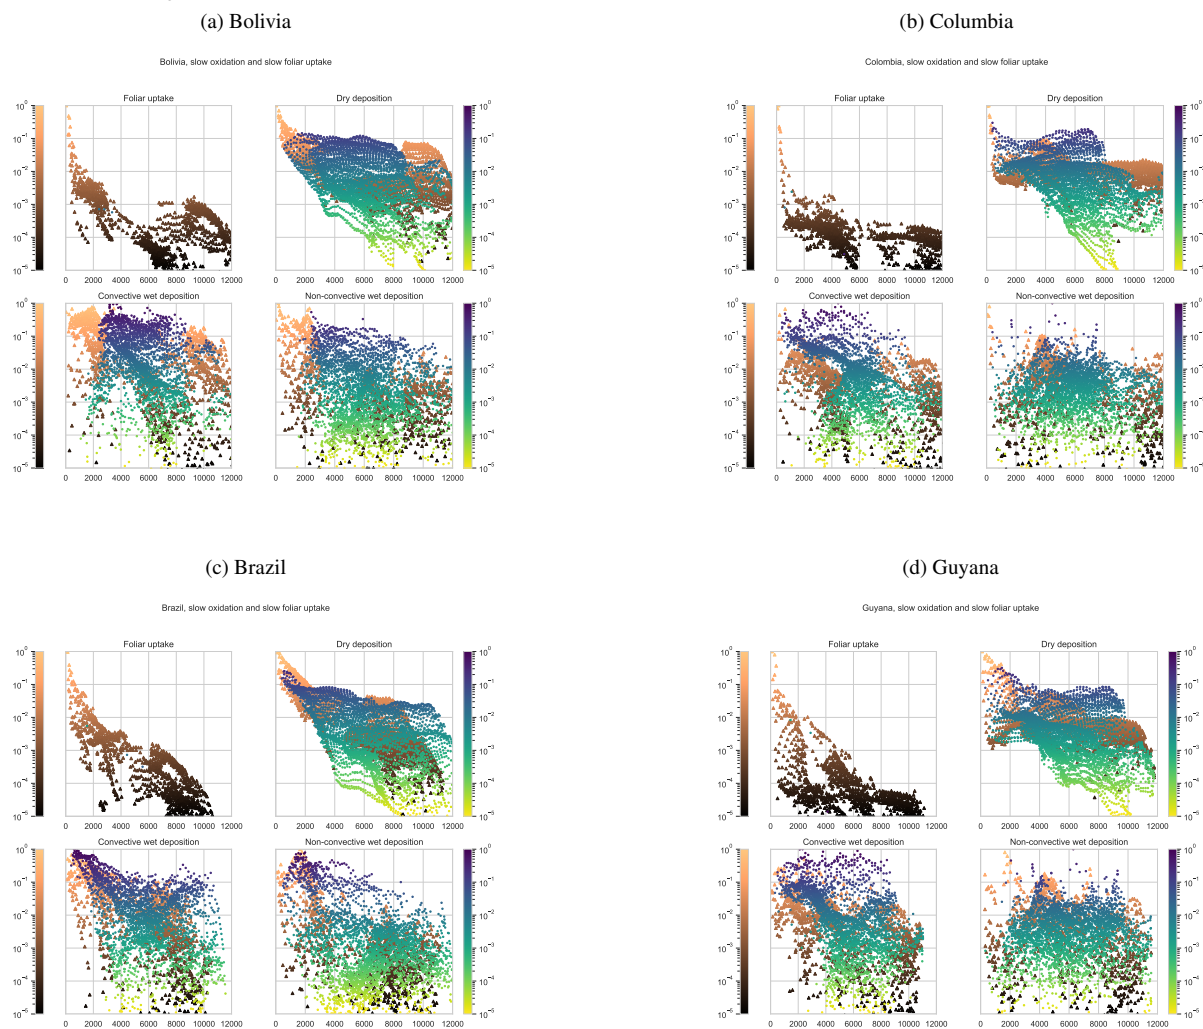

Figure S4. Normalised Hg Deposition vs. distance from emission source for the South-East Asian domains. The left colour bar represents deposition to land, the right to seas and oceans

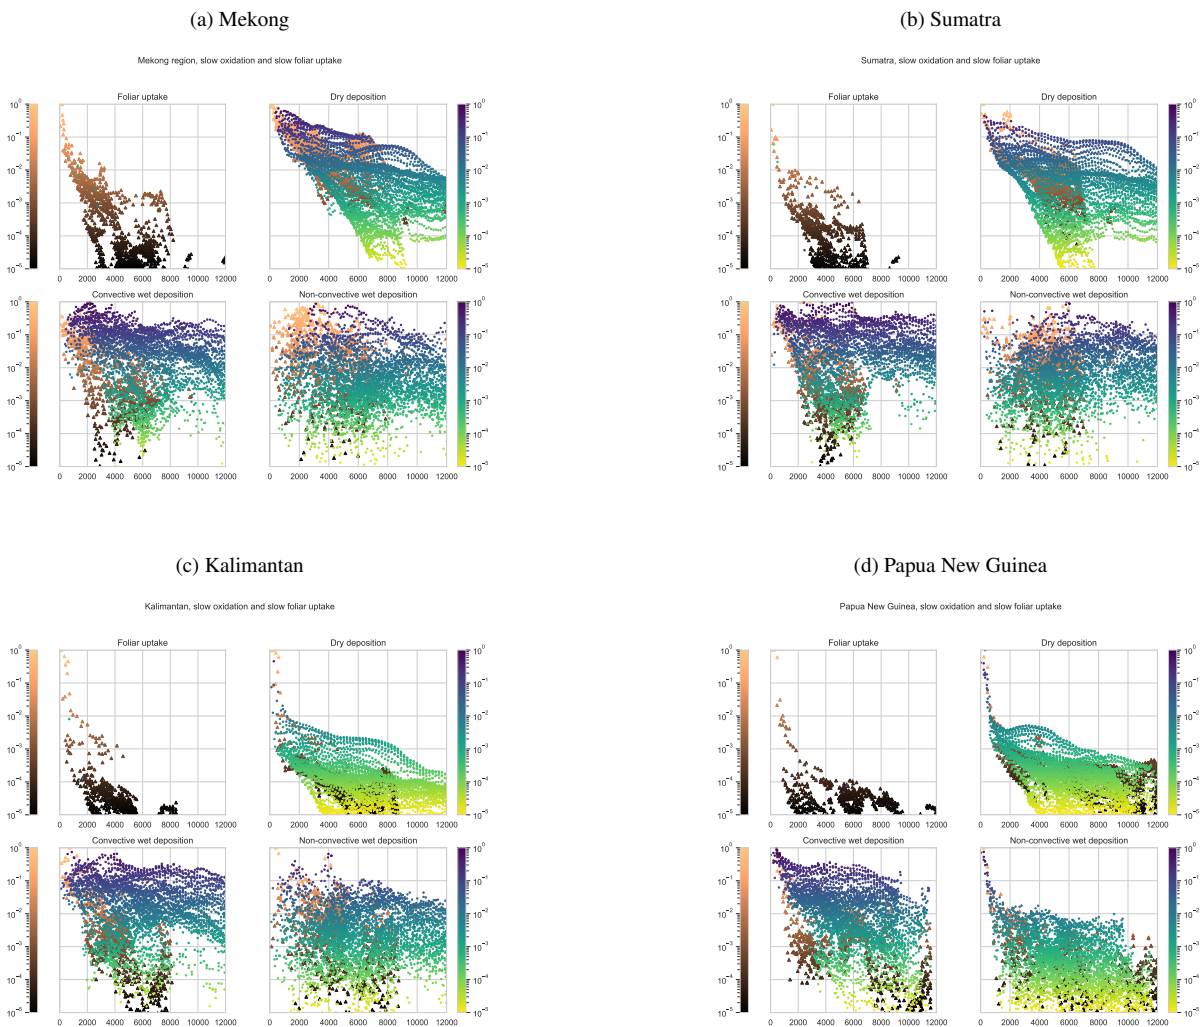

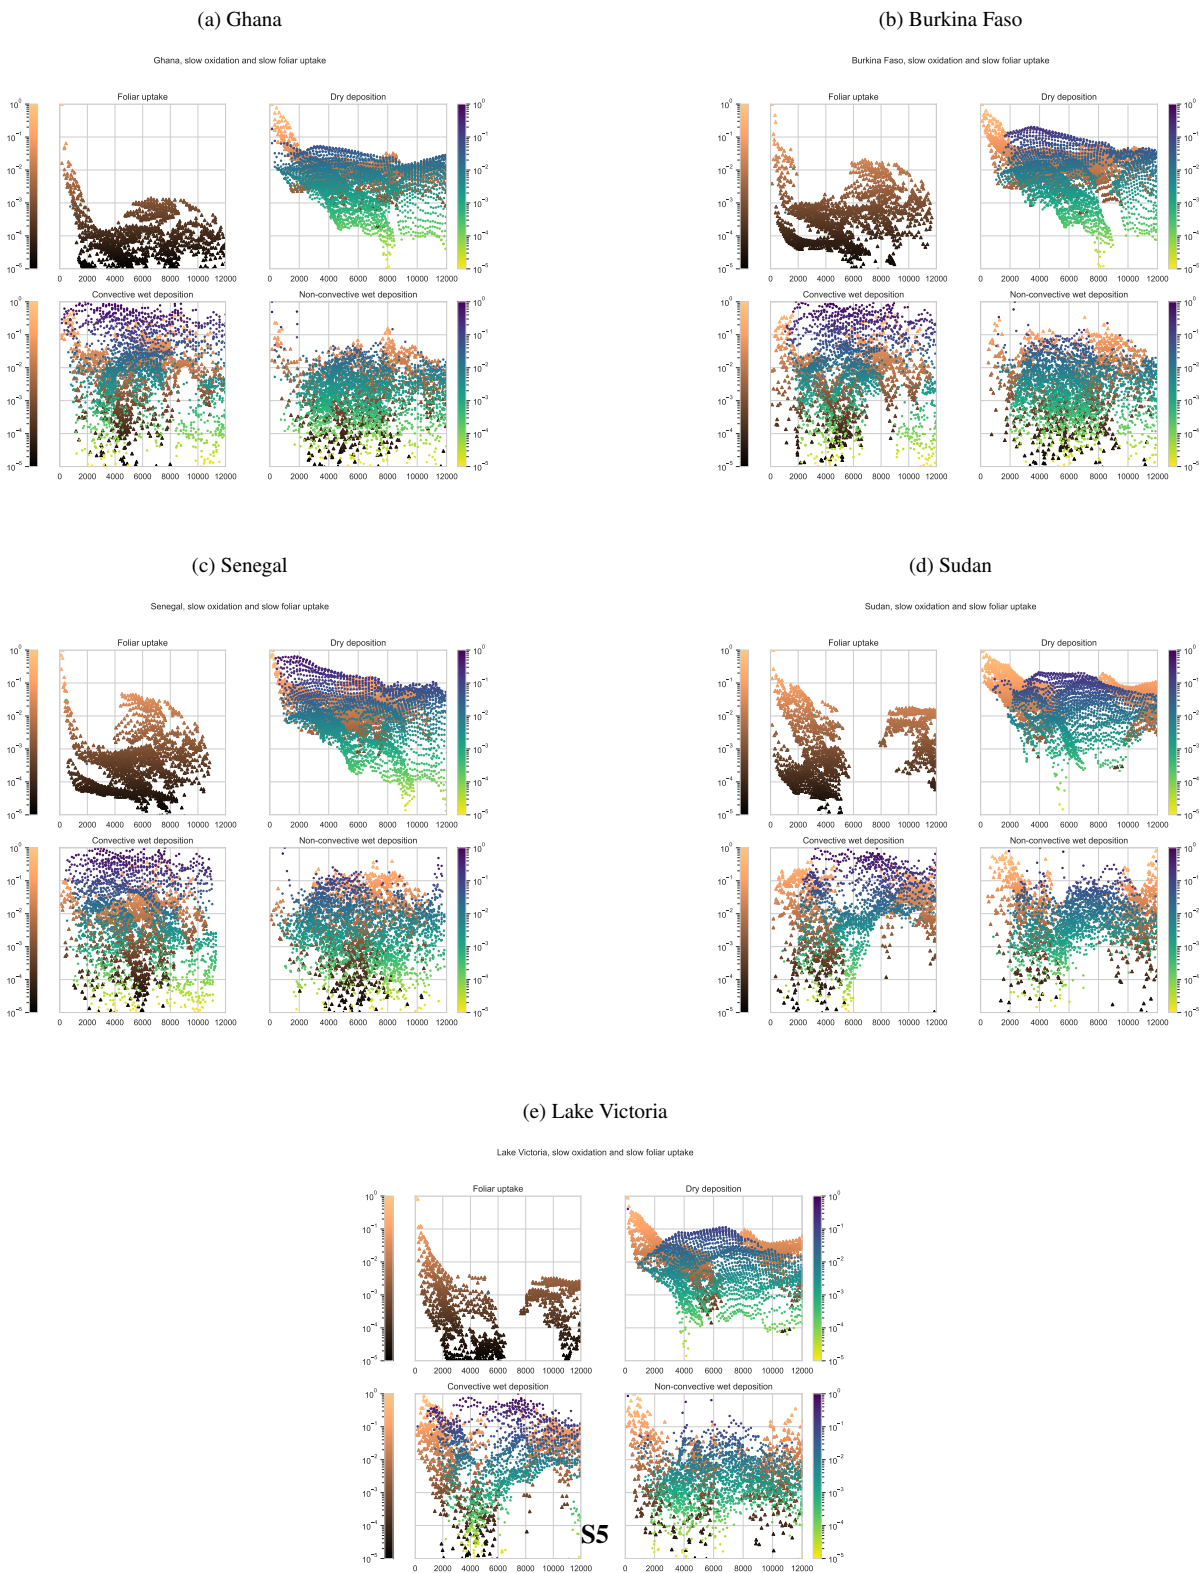

Figure S5. Normalised Hg Deposition vs. distance from emission source for the African domains. The left colour bar represents deposition to land, the right to seas and oceans

S3 Deposition Distance Barcharts

Note on deposition velocity

Figure S6. Deposition vs. distance, South-East Asian emission domains. Percentages of the total within domain deposition

Figure S7. Deposition vs. distance, South-East Asian emission domains. Percentages of the total within domain deposition

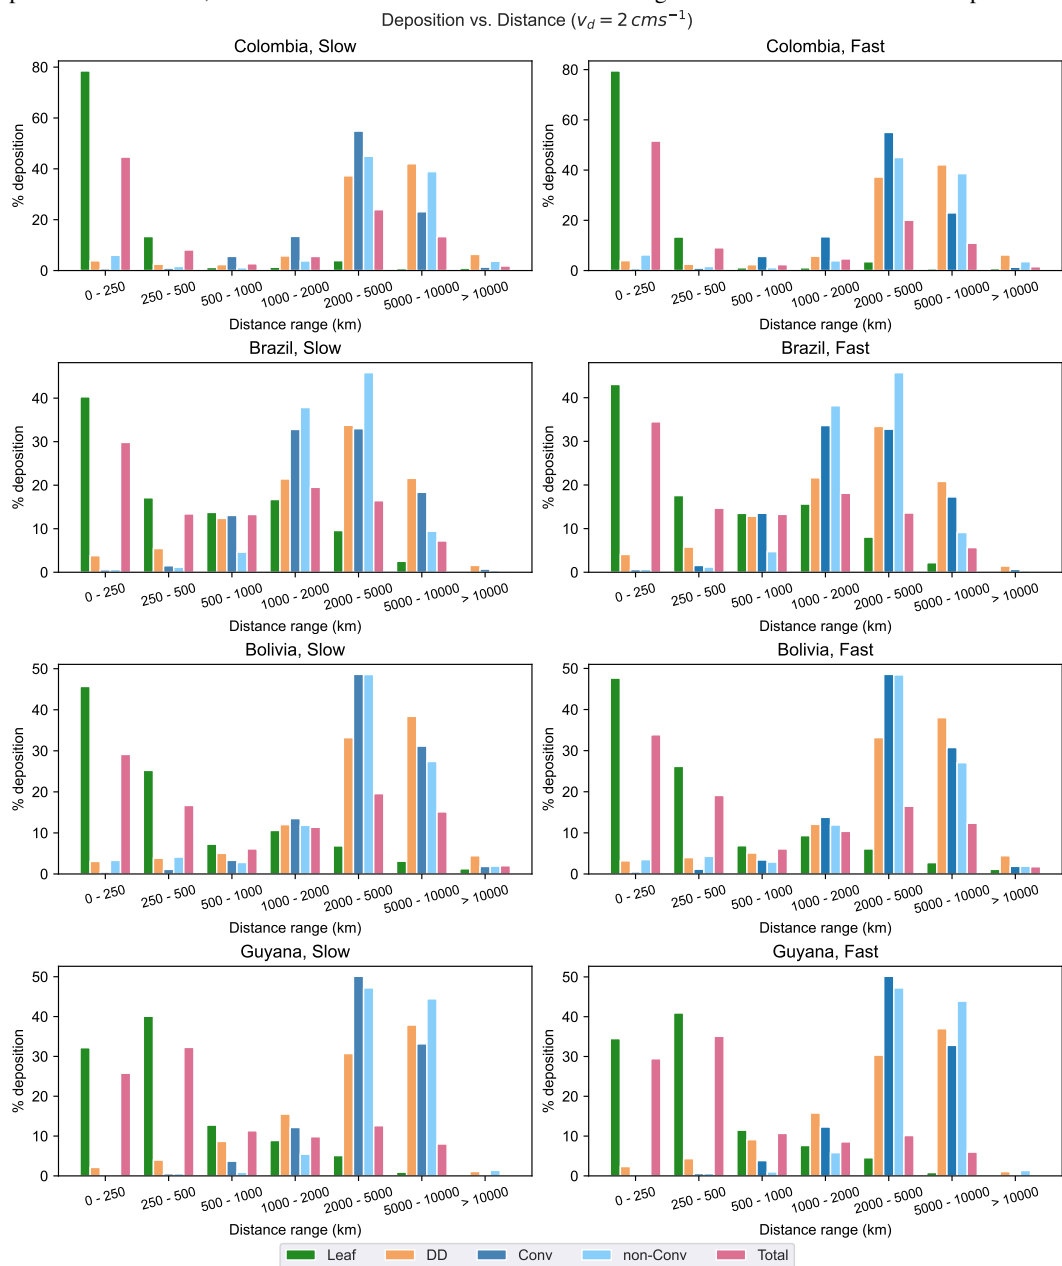

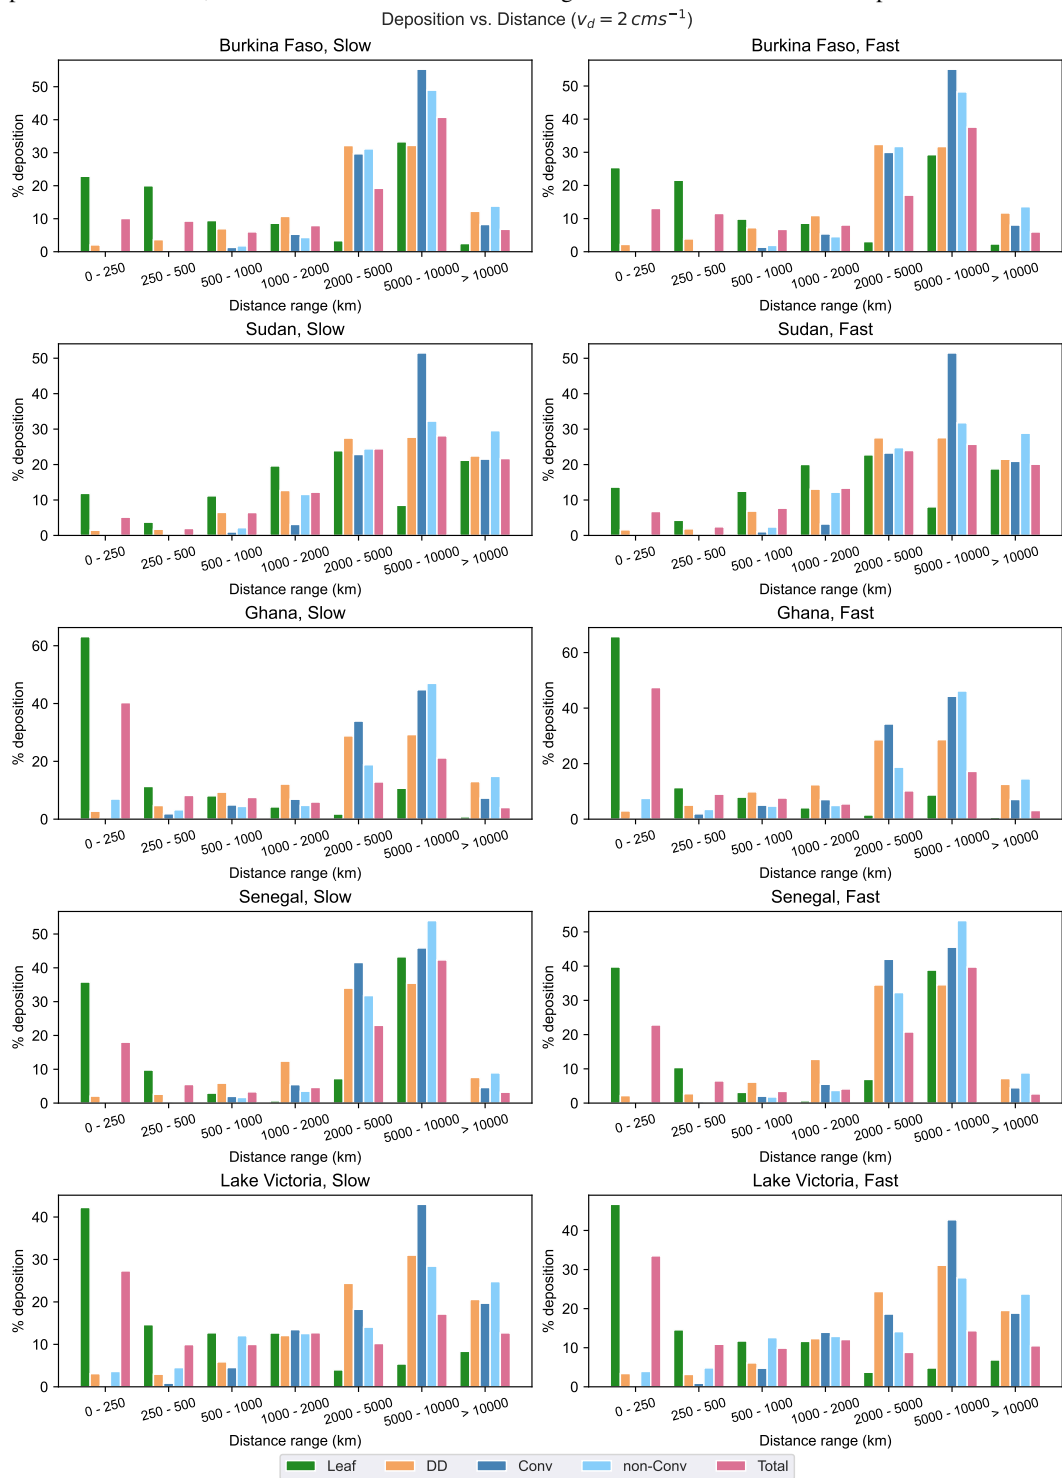

Figure S8. Deposition vs. distance, African emission domains. Percentages of the total within domain deposition

5 S4 Deposition Maps

These maps show the deposition from the simulations using the most rapid oxidation rate and the fastest foliar uptake, illustrating the differences in deposition fields for the different domains and different deposition pathways. The normalisation is to the maximum deposition for each pathway for each domain.

Figure S9. Normalised deposition from the domain in the Mekong region

Mekong River Domain, fast oxidation, rapid foliar uptake

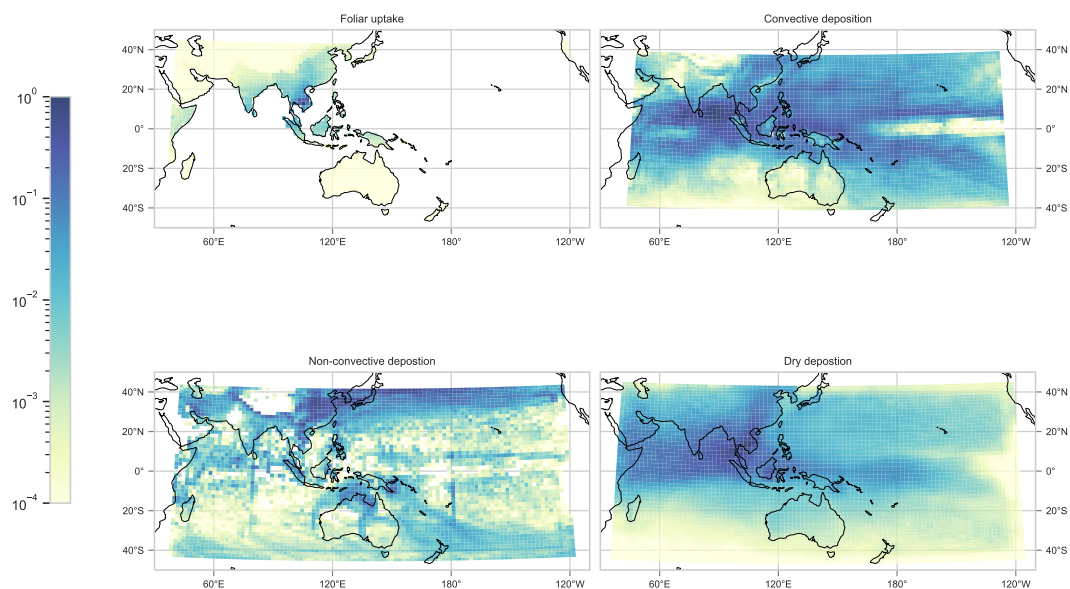

Figure S10. Normalised deposition from the domain in Sumatra

Sumatra Domain, fast oxidation, rapid foliar uptake

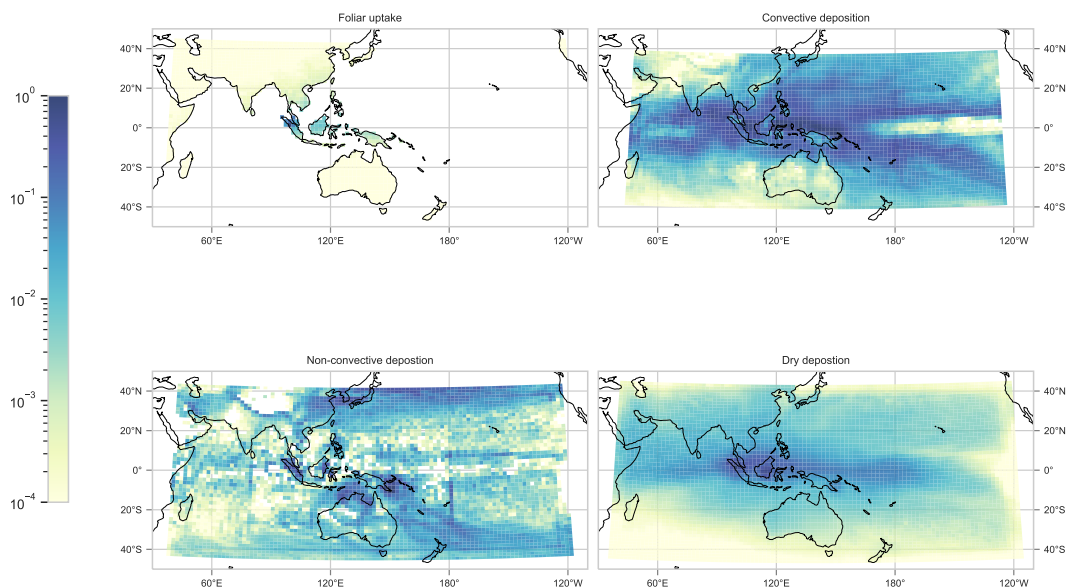

Figure S11. Normalised deposition from the domain in Kalimantan

Kalimantan Domain, fast oxidation, rapid foliar uptake

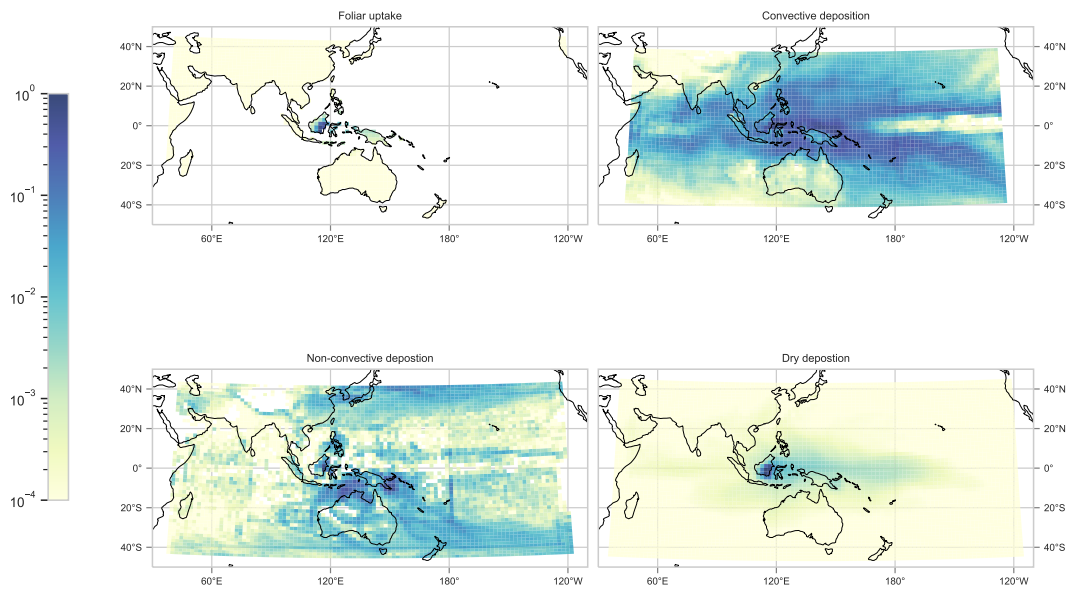

Figure S12. Normalised deposition from the domain in Papua New Guinea

Papua New Guinea Domain, fast oxidation, rapid foliar uptake

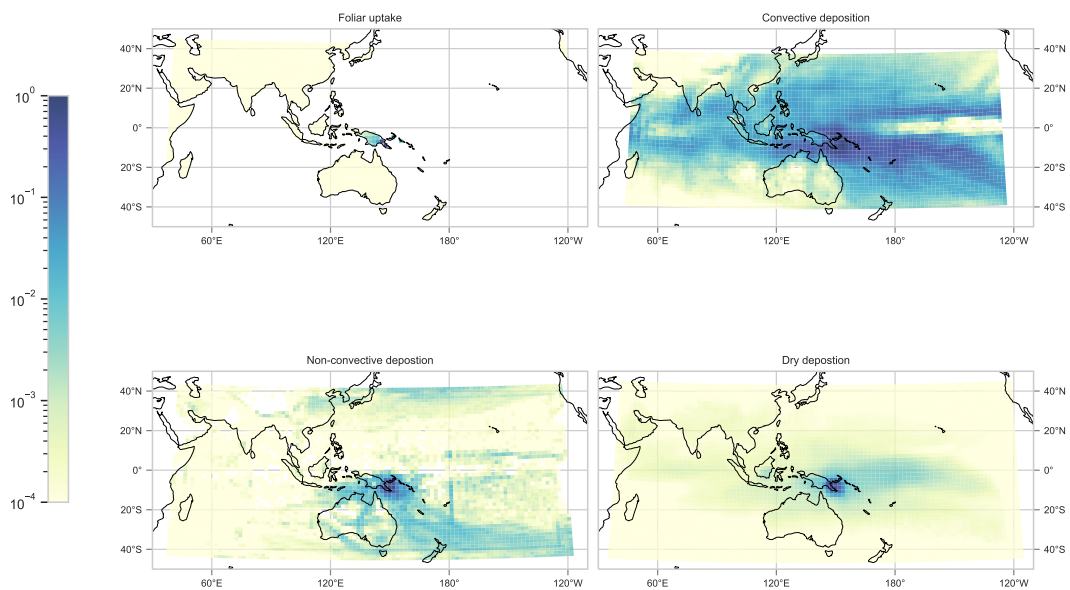

Figure S13. Normalised deposition from the domain in Colombia

Colombia Domain, fast oxidation, rapid foliar uptake

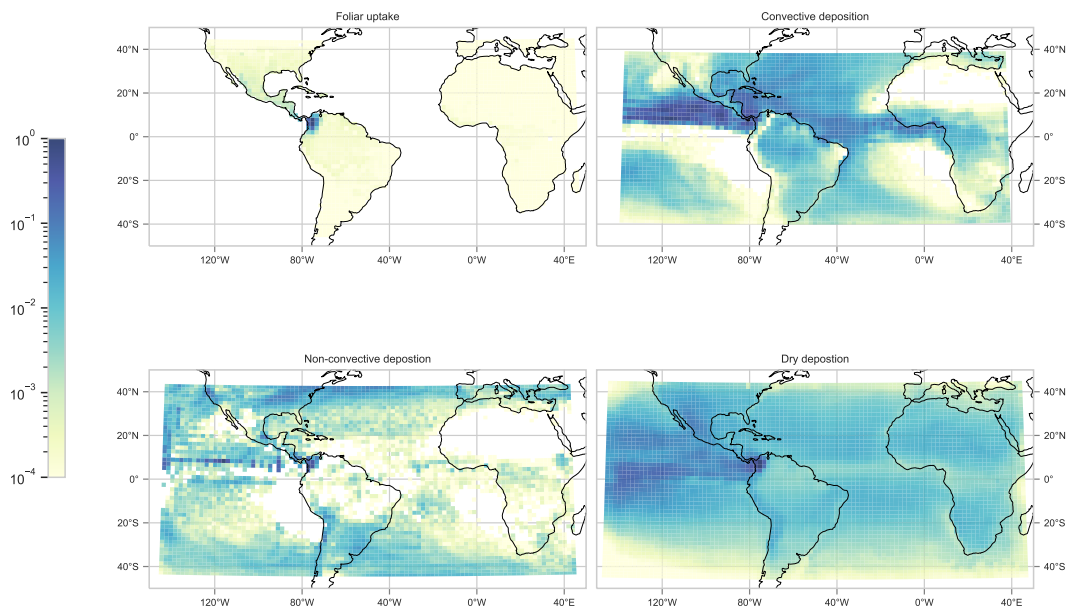

Figure S14. Normalised deposition from the domain in Bolivia

Bolivia Domain, fast oxidation, rapid foliar uptake

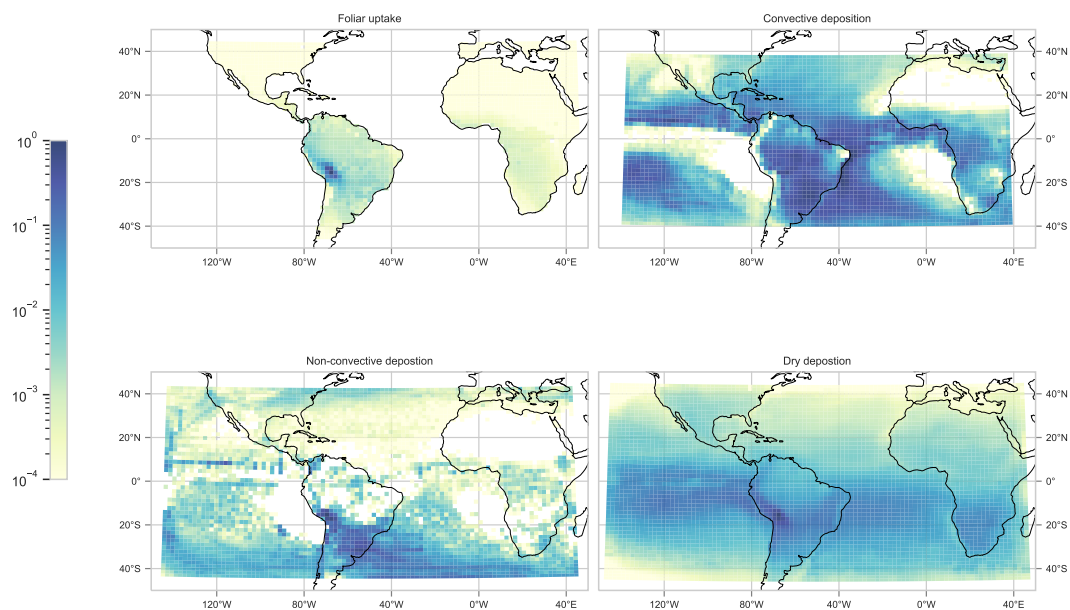

Figure S15. Normalised deposition from the domain in Brazil

Brazil Domain, fast oxidation, rapid foliar uptake

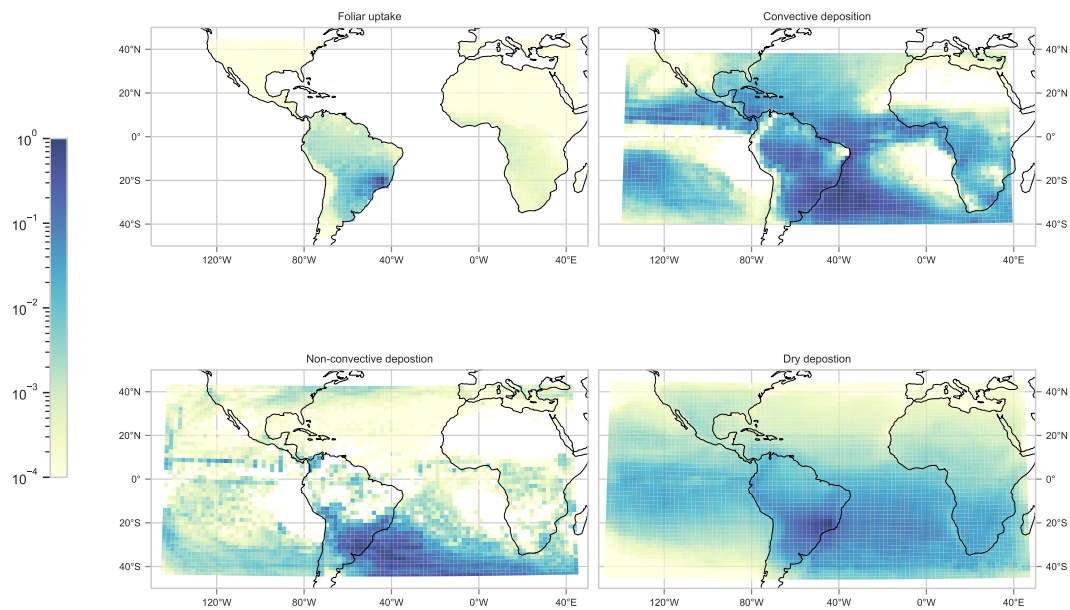

Figure S16. Normalised deposition from the domain in Guyana

Guyana Domain, fast oxidation, rapid foliar uptake

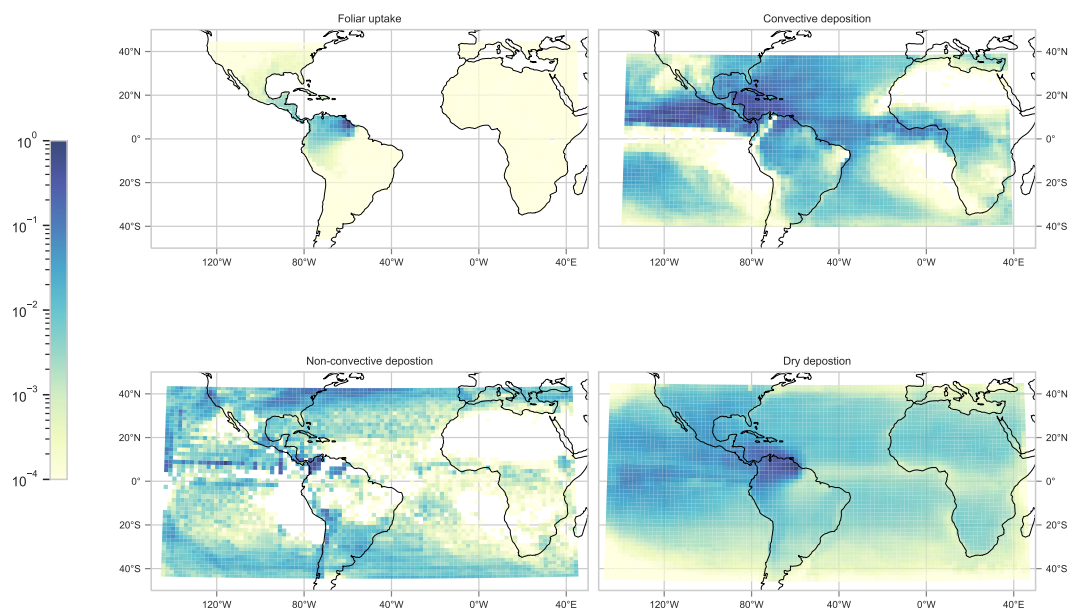

Figure S17. Normalised deposition from the domain in Ghana

Ghana Domain, fast oxidation, rapid foliar uptake

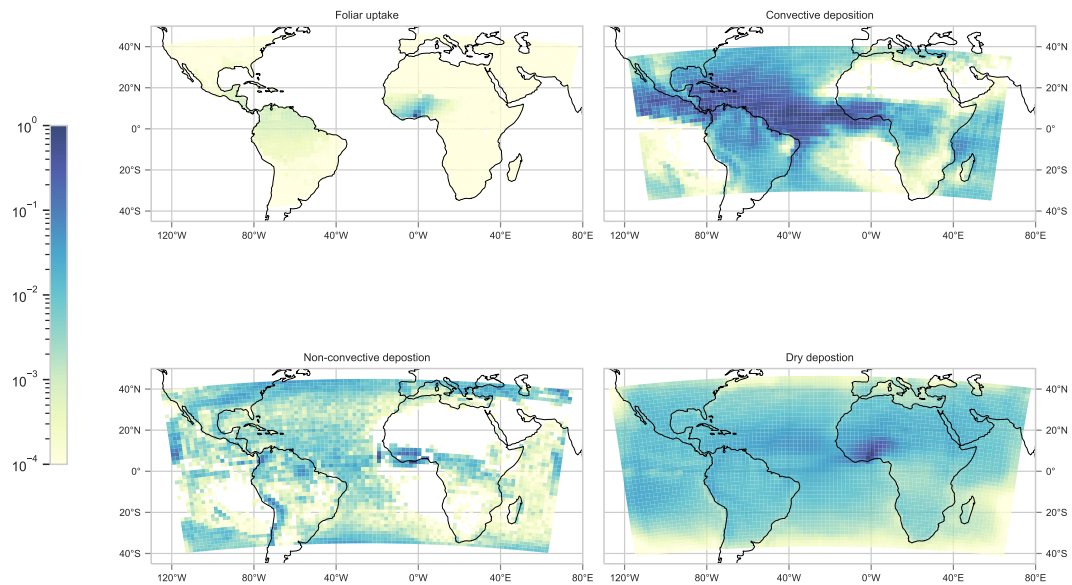

Figure S18. Normalised deposition from the domain in Burkina Faso
Burkina Faso Domain, fast oxidation, rapid foliar uptake

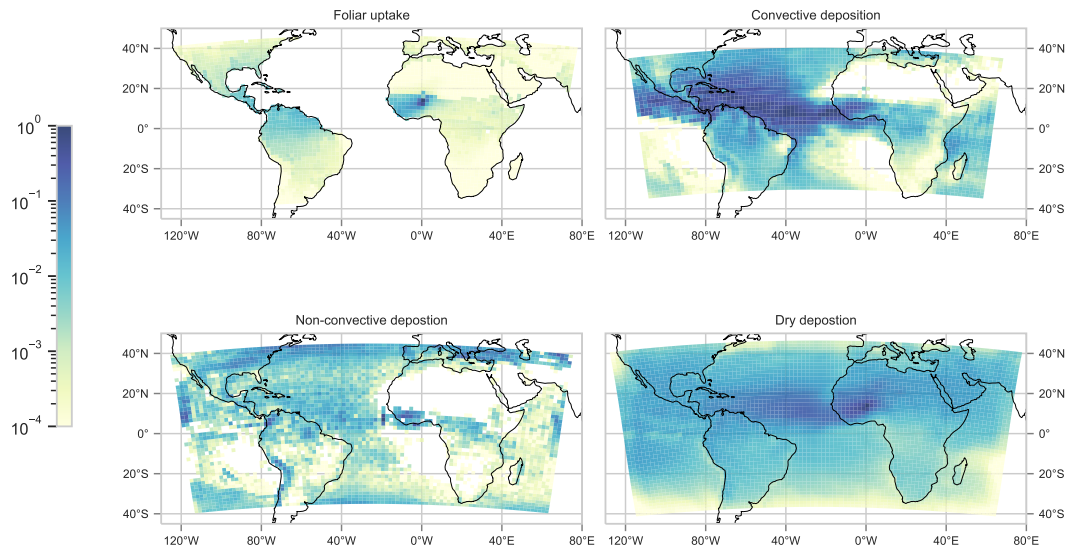

Figure S19. Normalised deposition from the domain in Senegal
Senegal Domain, fast oxidation, rapid foliar uptake

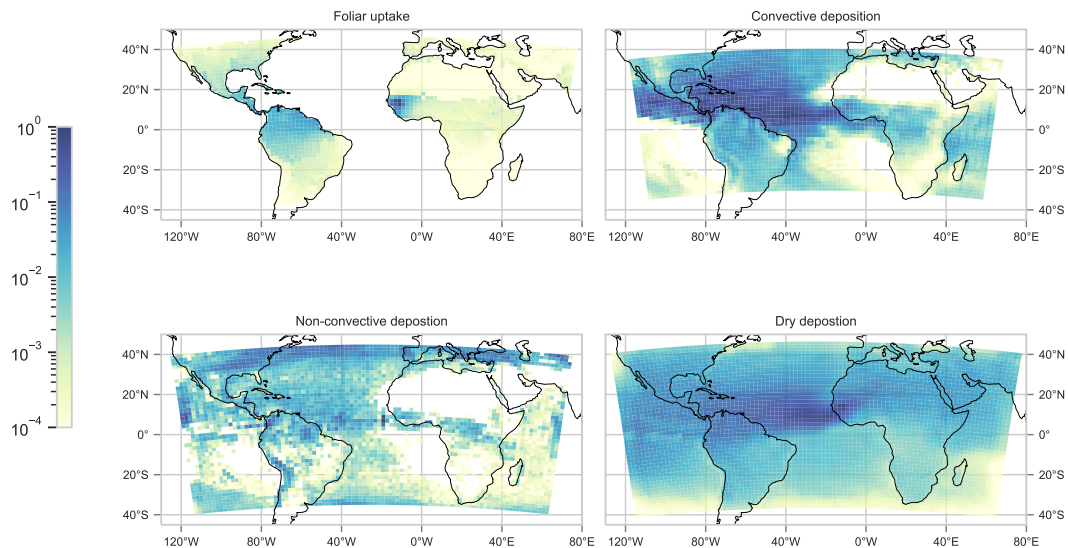

Figure S20. Normalised deposition from the domain in Sudan

Sudan Domain, fast oxidation, rapid foliar uptake

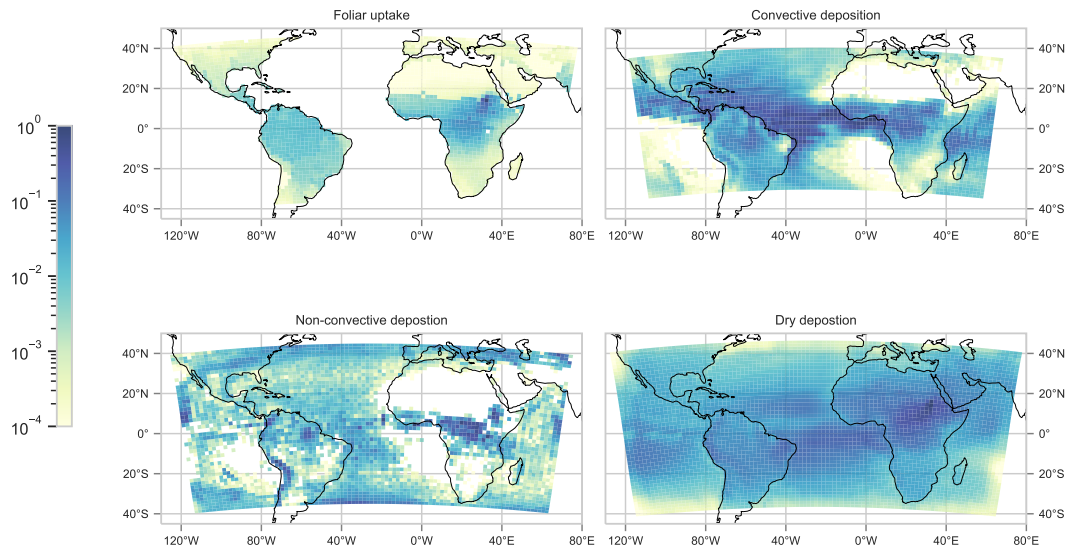

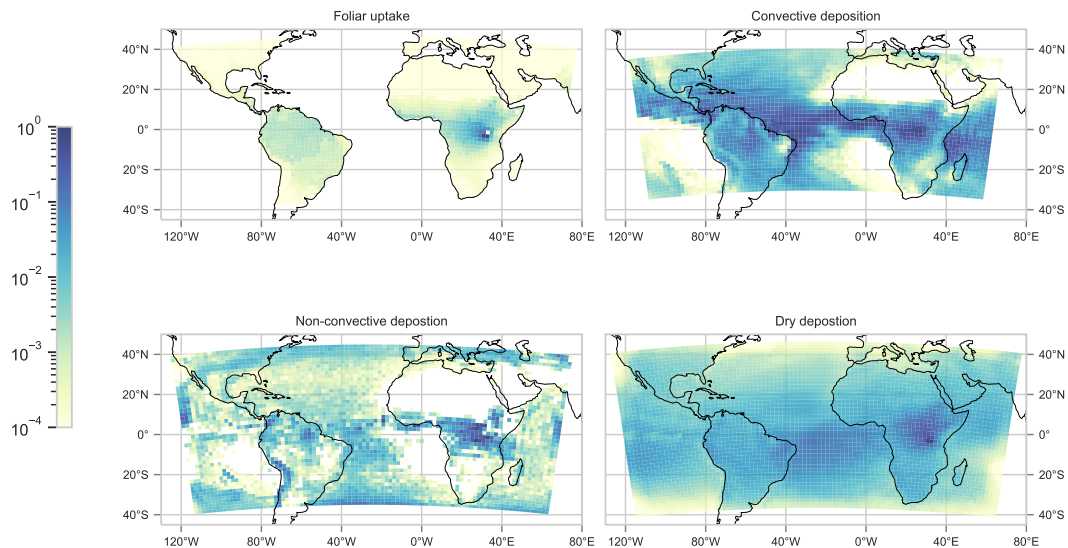

Figure S21. Normalised deposition from the domain near Lake Victoria

Lake Victoria Domain, fast oxidation, rapid foliar uptake
