Supporting Information for

An Assessment of Antarctic Sea-ice Thickness in CMIP6 Simulations with Comparison to the Satellite-based Observations and Reanalyses

Shreya Trivedi[1], Will Hobbs[2], and Marilyn Raphael[1]

[1]Department of Geography, University of California, Los Angeles

[2]Australian Antarctic Program Partnership, Institute for Marine and Antarctic Studies, University of Tasmania, nipaluna/Hobart, Australia.

Contents of this file

Introduction

The data files used in the supporting document are derived using Python. The format of the datasets was netcdf (.nc) format. The visualization generated is in the form of images (.png) format.

The spatial biases are calculated in Python by subtracting the reference dataset for respective months from the CMIP6 modeled data. (Fig. S1-S3)

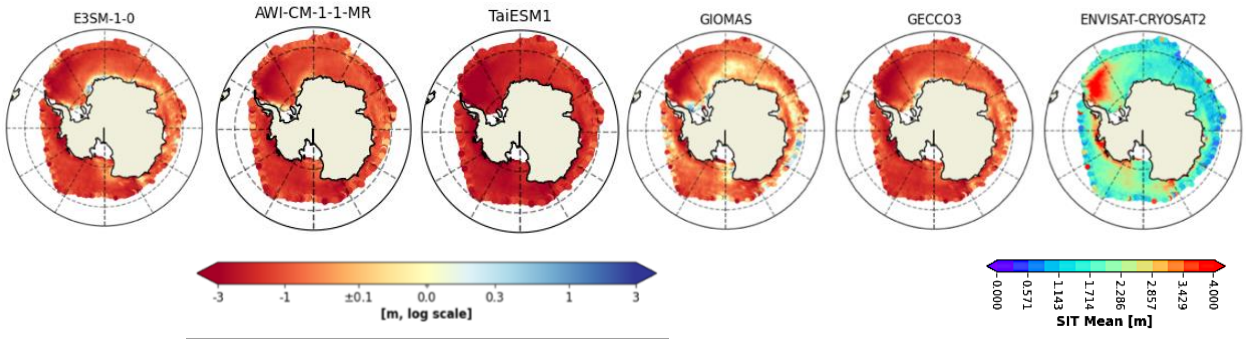

Figure S1: Spatial Biases of SIT from 2002 to 2014 (September) from 39 CMIP6 models and Reanalyses from the reference dataset: ENVISAT-CS-2. Last figure shows the time averaged SIT for ENVISAT-CS-2.

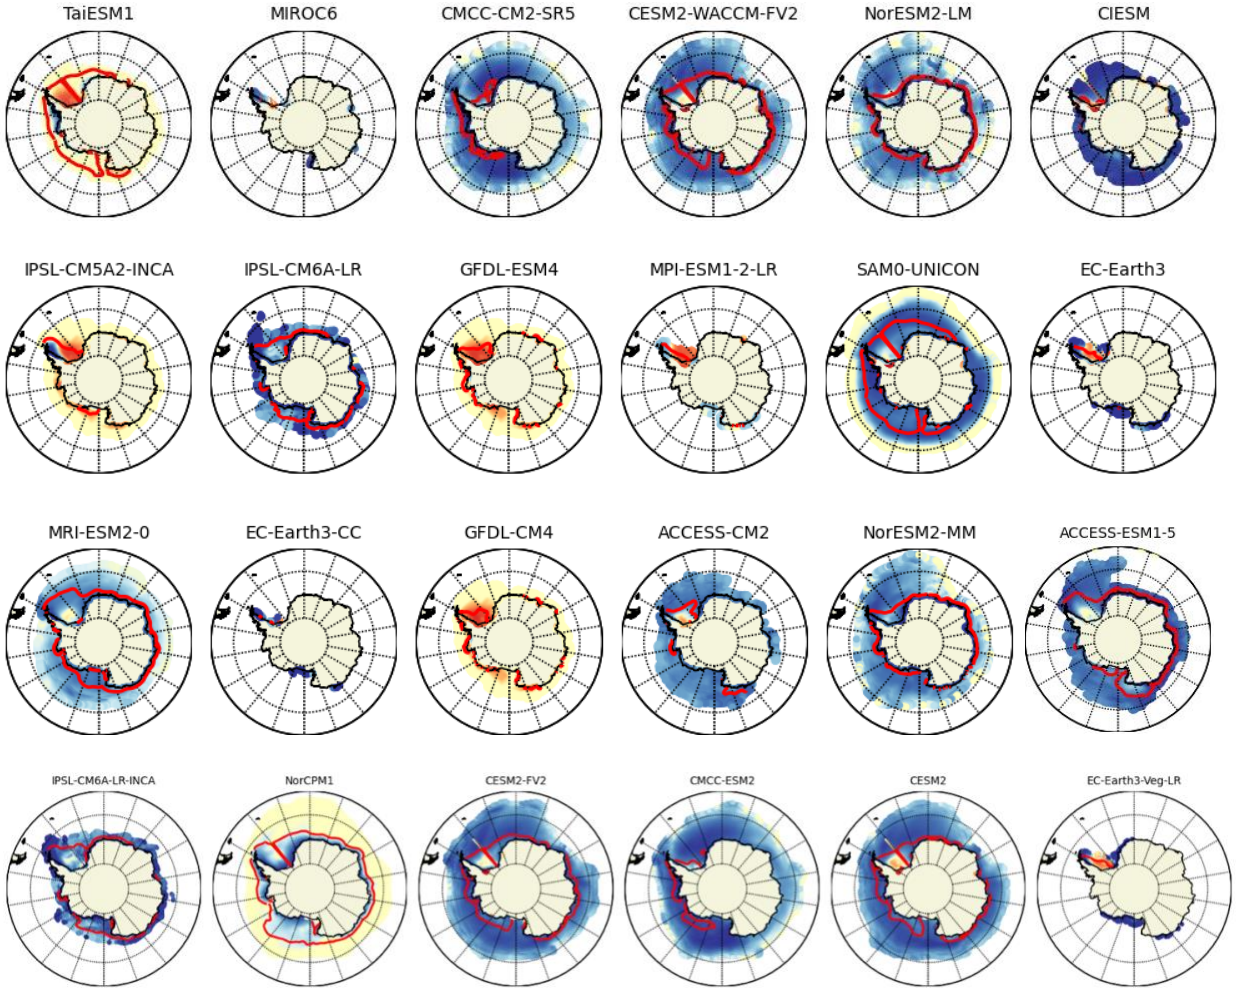

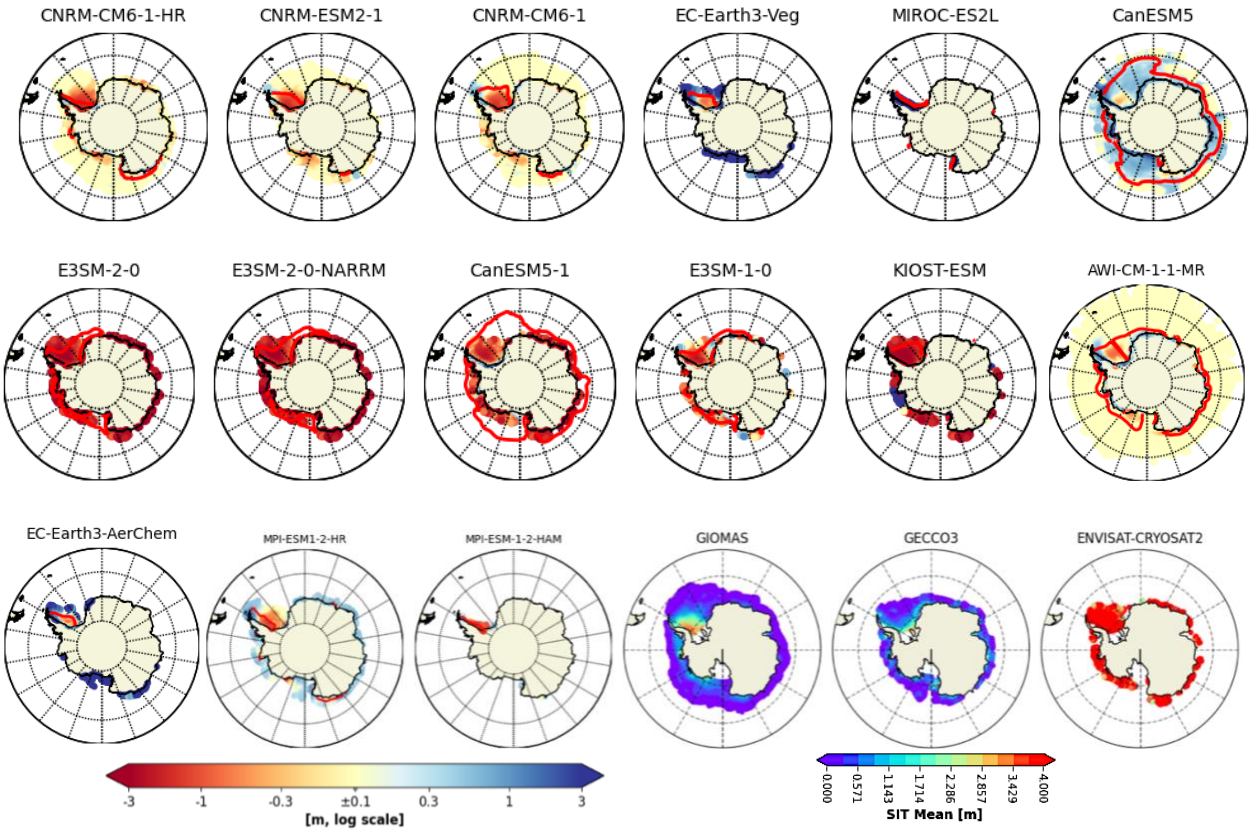

Figure S2: Spatial Biases of SIT averaged over 2002 to 2014 (February) for 39 CMIP6 models from the reference dataset: GIOMAS. The last three plots show the time averaged SIT for the three sea-ice products. The red contours represent the sea-ice edge (15%SIC).

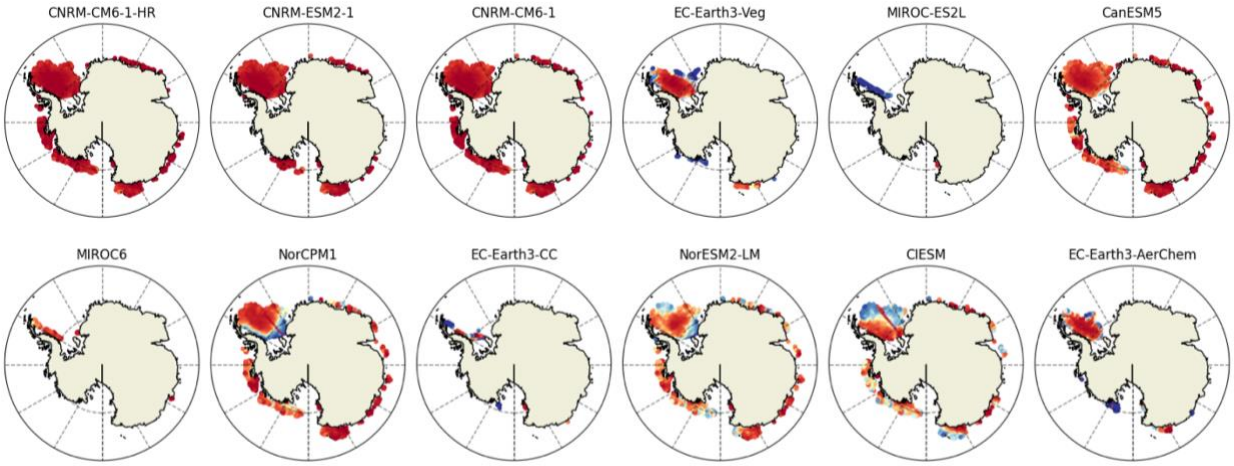

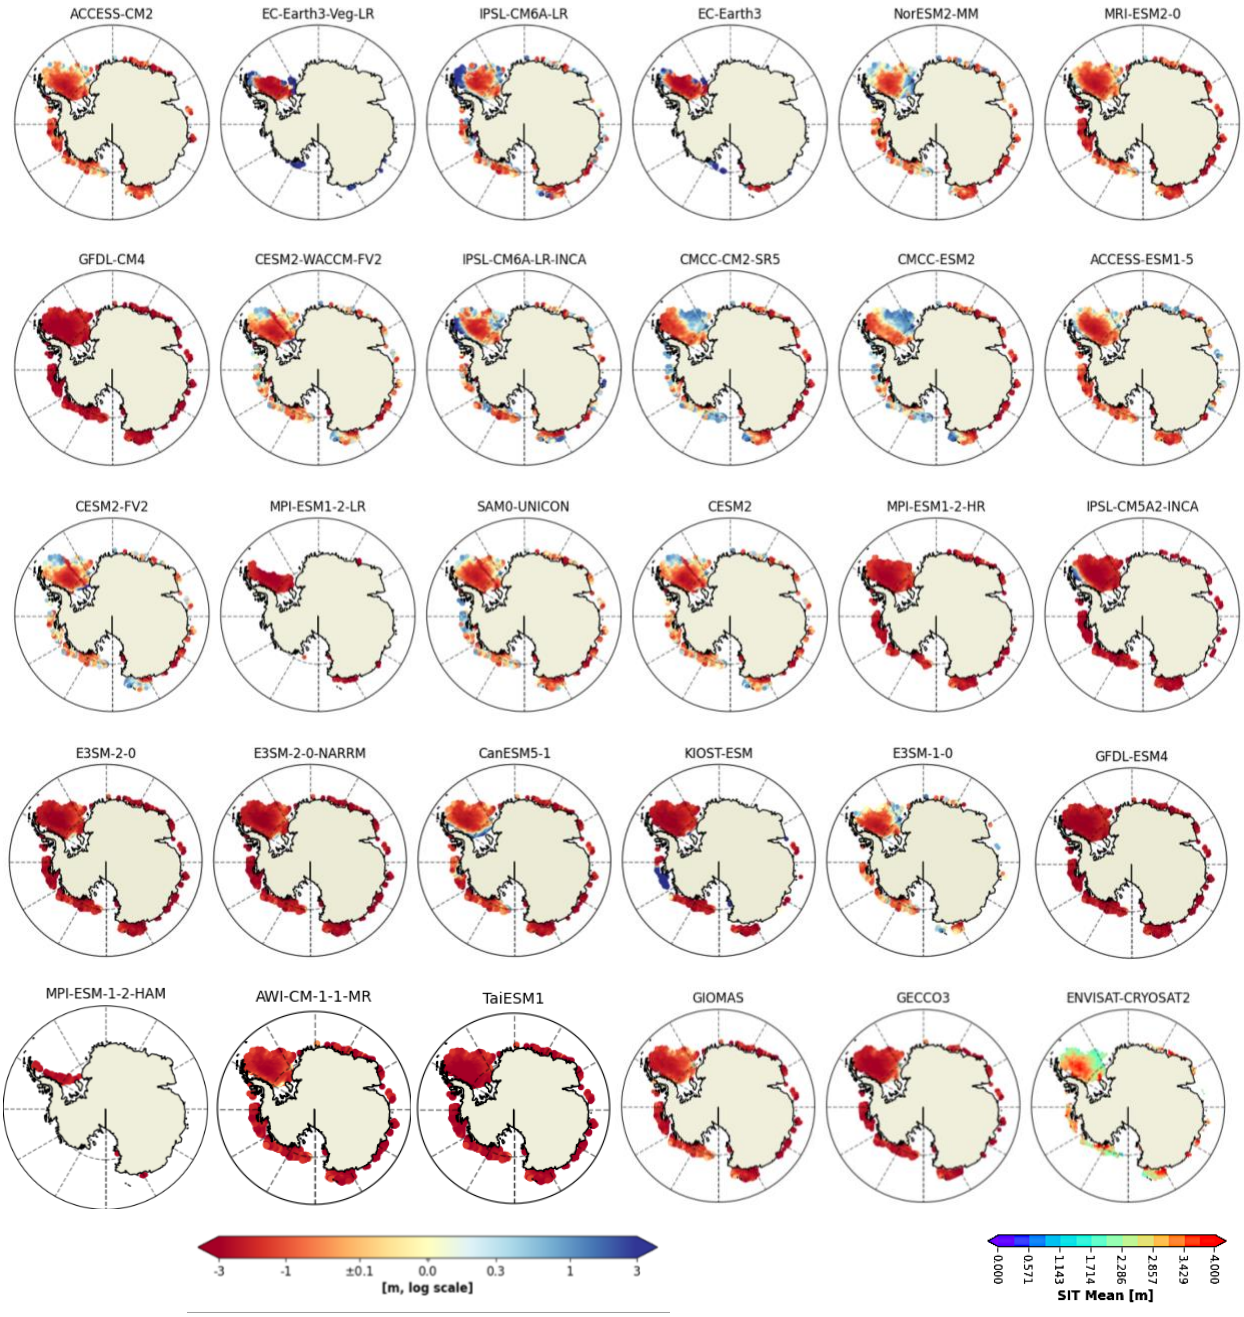

Figure S3: Spatial Biases of SIT from 2002 to 2014 (February) from 39 CMIP6 models and Reanalyses from the reference dataset: ENVISAT-CS-2. Last figure shows the time averaged SIT for ENVISAT-CS-2.

Tables

Source	Spatial Resolution	Temporal Resolution	Variable used	References
SATELLITE PRODUCTS: Envisat *(Radar Altimeter 2 (RA2))* and CryoSat-2 *(Synthetic-Aperture Interferometric Radar Altimeter (SIRAL)).* Based on Ku-band frequencies.	50 km	2002-2012 (Envisat) Since 2010 (CryoSat-2)	Sea-ice Thickness	(Hendricks et al., 2018)
SEA-ICE ESTIMATES AND REANALYSES: Global Ice-Ocean Modeling and Assimilation System *(GIOMAS)*	0.8 degrees	2002-2014	Effective Sea-ice Thickness ("*heff*")	(Zhang and Rothrock, 2003)
German contribution to the Estimating the Circulation and Climate of the Ocean project (GECCO3)	0.4 degrees	2002-2014	Effective Sea-ice Thickness ("*heff*")	(Köhl, 2020)

Table S1: Table showing observation dataset details.
