

Dear Editor,

We agree that the work by Gilbert et al. (2014) is absolutely relevant and have included a reference to it in our review of studies on the topic. As for the work by Brondex et al. (2020), it is not related to the topic of ice/firn dating and we mention it in our responses to reviewers just because it is one of the examples of the use of the same rheological law as in our study. In our opinion, there is no necessity to cite this work in the text of our manuscript. Thank you for your suggestions!

Sincerely,

Gleb Chernyakov
