Figure S3: Comparison of uncertainty, dissimilarity index and AOA for the mainland for SOC stocks at depth 0-30 (1a, 2a, 3a) and at depth 30-100 (1b, 2b, 3b).

20 **Figure S4: Comparison of uncertainty, dissimilarity index and AOA for Herschel Island for SOC stocks at depth 0-30 (1a, 2a, 3a) and at depth 30-100 (1b, 2b, 3b).**

25 **Figure S5: Uncertainty versus dissimilarity index for Herschel Island (1a and 1b) and the mainland (2a and 2b). The values are sampled from the raster files at random locations throughout the study area.**

Table S1: Dissimilarity Index (DI) thresholds chosen by the area of applicability (AOA) method.

model	AOA Thresholds
<i>whole area</i>	
SOC stock 0-30 cm	0.40
SOC stocks 30-100 cm	0.51
N stocks 0-30 cm	0.35
N stocks 30-100 cm	0.34
<i>mainland</i>	
SOC stock 0-30 cm	0.46
SOC stocks 30-100 cm	0.17
N stocks 0-30 cm	0.40
N stocks 30-100 cm	0.44
<i>Herschel Island</i>	
SOC stock 0-30 cm	0.70
SOC stocks 30-100 cm	0.91
N stocks 0-30 cm	0.36
N stocks 30-100 cm	0.59

Table S2a: Comparison of average soil organic carbon (SOC) stocks for each model prediction depicting the whole area and additionally the AOA of each respective prediction and predictive model.
