

## **List of Figure as Supplementary Material**

Figure. S. 1. Hydrological conditions defined by Streamflow Drought Index for the historical period

Figure. S. 2. Description of calibration period data lengths in this study

Figure. S. 3. KGEs for hydrological conditions classified by SDI (ellipse indicates confidence level 90% (prediction))

Figure. S. 4. Comparison of before and after bias-corrected GCM data against observed data using a Taylor diagram

Figure. S. 5. Projected annual changes in future runoff ( $\text{m}^3/\text{s}$ )

Figure. S. 6. Flow duration curves of projected future low flow

Figure. S. 7. Validation of statistical assumptions for the ANOVA models for the NF, showing representative Q-Q plots and Residuals vs. Fitted plots

Figure. S. 8. Validation of statistical assumptions for the ANOVA models for the DF, showing representative Q-Q plots and Residuals vs. Fitted plots

Figure. S. 9. Contribution of the four sources to uncertainty in the future runoff projection

Figure. S. 10. Contribution of the four sources to uncertainty in the future hydrological drought
