Responses figures for RC#2

Figure #1

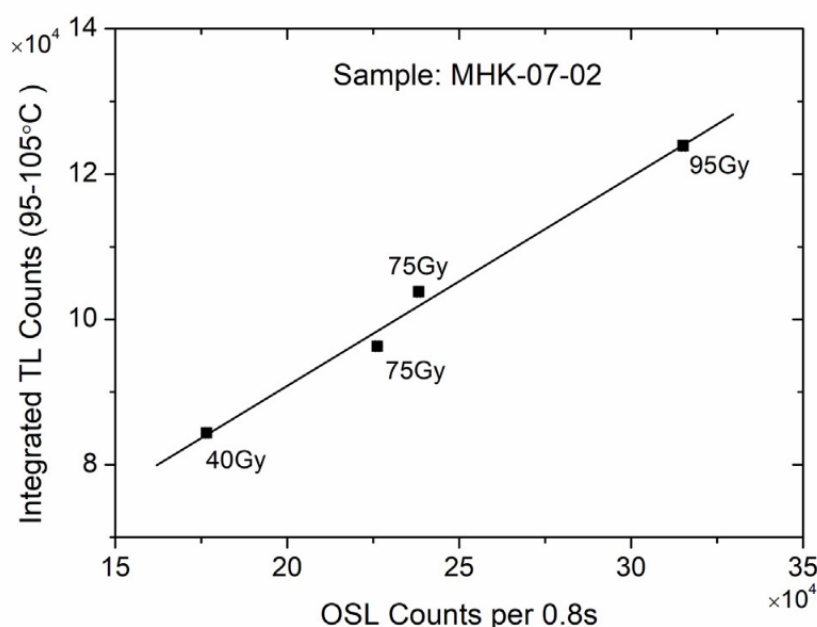
Chauhan et al., 2019 showed a linear correlation up to high regenerated dose (i.e 95 Gy),


Fig. 1. Figure shows the correlation of TL and OSL signals from a single grain.

Figure #2

Plot box of the same color are results from the same sample. Plot box and sample names in black are the results from LA-ICP-MS analyses on whole rock thin sections. Plot box and sample names in grey are the results from LA-ICP-MS analyses on treated quartz grains mounted in resin.
