

Dear Editor,

In the uploaded revised version of the manuscript “*The most complete Holocene peat record from Central Europe: multi-proxy reconstruction of postglacial wetness changes and climate events from Linje peatland, Poland*”, I have incorporated the appendices into the main manuscript file and corrected minor language and style issues. Under “Data availability”, I have also added the DOI to the Mendeley Data repository, where the dataset is now publicly accessible.

For the graphical abstract, Figure 7 may be used.

Sincerely,

Eliise Poolma
