

1 General Comment

I thank both reviewers for their positive evaluation of the revised manuscript. Please find the reviewer's comments below, with my answers written in [blue](#).

2 First Reviewer

REVIEWER: The revised manuscript has addressed the previously raised concerns well. Before acceptance, the authors may consider revising the following minor issues: In Sections 2.4 and 2.5, it is recommended to retain only the key equations in the main text, while moving supplementary or intermediate formulas to the Appendix. Figures 7 and 8 require further improvement in quality. In the current version, the font size is too small to read clearly. It is suggested to reorganize the subplots into a 2×2 layout to enhance readability.

[ANSWER: I have now moved the equations of Sections 2.4 and 2.5 to the Appendix. I have also now restructured the layouts of Figures 7 and 8 to improve readability.](#)

3 Second Reviewer

REVIEWER: Thank you for addressing my comments in the revision.

[ANSWER: My pleasure.](#)
